INTRODUCTION

After "the happiest month of May that life had yet offered," Henry Adams on his way from Rome to Naples decided that "accidental education, whatever its economical return might be, was prodigiously successful as an object in itself." The easiest way to get an "accidental education" is to travel for it with an open and perceptive mind. But this is expensive and practicable to only a few. The rest of us are not completely cut off, however, for we, sitting comfortably at home, can nevertheless go in fancy with those who not only have seen but have been able to reproduce what they have seen. Such are the journeys which this book makes possible.

These trips are none the less real because they do not actually take place. Many of our best journeys are that kind. Christopher Morley once took a trip on the back of a post-card, and because it has so much persuasive charm, it is reproduced here. The Conrad selection is rather an imaginative picture of the beginning and end of trips to far countries than a trip in itself. The volume is hap-hazard, but so are the most fruit

ful journeys. Marco Polo is here, along with Richard Henry Dana, Pierre Loti, Conrad, and William McFee, those other romantic wanderers of the sea. McFee's is advice to a young gentleman about to travel, from one, we might add, who has done much of it himself, Hazlitt's is an essay on the proper frame of mind for a journey, "so good," Stevenson said "that a tax should be levied on all who have not read it." George Borrow in Spain, Clayton Hamilton in the Alps, Wallace in Borneo, Keats in Scotland, Kinglake crossing the desert, Mungo Park in Africa, and several others make up a most agreeable package of ramblings in fact and in spirit.

ON GOING A JOURNEY

ONE of the pleasantest things in the world is going a journey; but I like to go by myself. I can enjoy society in a room; but out of doors, nature is company enough for me. I am then never less alone than when alone.

“The fields his study, nature was his book.”

I cannot see the wit of walking and talking at the same time. When I am in the country, I wish to vegetate like the country. I am not for criticizing hedge-rows and black cattle. I go out of town in order to forget the town and all that is in it. There are those who for this purpose go to watering-places, and carry the metropolis with them. I like more elbow-room, and fewer incumbrances. I like solitude, when I give myself up to it, for the sake of solitude; nor do I ask for

——“a friend in my retreat,
Whom I may whisper solitude is sweet.”

The soul of a journey is liberty, perfect liberty, to think, feel, do just as one pleases. We go a journey chiefly to be free of all impediments and

of all inconveniences; to leave ourselves behind much more to get rid of others. It is because we want a little breathing-space to muse on indifferent matters, where Contemplation

“May plume her feathers and let grow her wing
That in the various bustle of resort
Were all too ruffled, and sometimes impair’d,”

that I absent myself from the town for awhile without feeling at a loss the moment I am left to myself. Instead of a friend in a post-chaise or in a Tilbury, to exchange good things with, and to vary the same stale topics over again, for once let me have a truce with impertinence. Give me the clear blue sky over my head, and the green turf beneath my feet, a winding road before me and a three hours' march to dinner—and then I am thinking! It is hard if I cannot start some game on these lone heaths. I laugh, I run, I leap, I sing for joy. From the point of yonder rolling cloud, I plunge into my past being, and revisit there, as the sun-burnt Indian plunges headlong into the wave that wafts him to his native shore. Then long-forgotten things, like “sunken wrecks and sumless treasures,” burst upon my eager sight, and I begin to feel, think, and be myself again. Instead of an awkward silence, broken by attempts at wit or dull common-places, mine is that undisturbed silence of the heart which alone is perfect eloquence. No one likes puns, alliter-

tions, antitheses, argument, and analysis better than I do; but I sometimes had rather be without them. "Leave, oh, leave me to my repose!" I have just now other business in hand, which would seem idle to you, but is with me "very stuff of the conscience." Is not this wild rose sweet without a comment? Does not this daisy leap to my heart set in its coat of emerald? Yet if I were to explain to you the circumstance that has so endeared it to me, you would only smile. Had I not better then keep it to myself, and let it serve me to brood over, from here to yonder craggy point, and from thence onward to the far-distant horizon? I should be but bad company all that way, and therefore prefer being alone. I have heard it said that you may, when the moody fit comes on, walk or ride on by yourself, and indulge your reveries. But this looks like a breach of manners, a neglect of others, and you are thinking all the time that you ought to rejoin your party. "Out upon such half-faced fellowship," say I. I like to be either entirely to myself, or entirely at the disposal of others; to talk or be silent, to walk or sit still, to be sociable or solitary. I was pleased with an observation of Mr. Cobbett's, that "he thought it a bad French custom to drink our wine with our meals, and that an Englishman ought to do only one thing at a time." So I cannot talk and think, or indulge in melancholy musing and lively conversa-

tion by fits and starts. "Let me have a companion of my way," says Sterne, "were it but to remark how the shadows lengthen as the sun declines." It is beautifully said: but in my opinion, this continual comparing of notes interferes with the involuntary impression of things upon the mind, and hurts the sentiment. If you only hint what you feel in a kind of dumb show, it is insipid: if you have to explain it, it is making a toil of a pleasure. You cannot read the book of nature, without being perpetually put to the trouble of translating it for the benefit of others. I am for the synthetical method on a journey, in preference to the analytical. I am content to lay in a stock of ideas then, and to examine and anatomize them afterwards. I want to see my vague notions float like the down of the thistle before the breeze, and not to have them entangled in the briars and thorns of controversy. For once, I like to have it all my own way; and this is impossible unless you are alone, or in such company as I do not covet. I have no objection to argue a point with any one for twenty miles of measured road, but not for pleasure. If you remark the scent of a beanfield crossing the road, perhaps your fellow-traveller has no smell. If you point to a distant object, perhaps he is short-sighted, and has to take out his glass to look at it. There is a feeling in the air, a tone in the colour of a cloud which hits your fancy, but the effect of which

you are unable to account for. There is then no sympathy, but an uneasy craving after it, and a dissatisfaction which pursues you on the way, and in the end probably produces ill humour. Now I never quarrel with myself, and take all my own conclusions for granted till I find it necessary to defend them against objections. It is not merely that you may not be of accord on the objects and circumstances that present themselves before you—these may recall a number of objects, and lead to associations too delicate and refined to be possibly communicated to others. Yet these I love to cherish, and sometimes still fondly clutch them, when I can escape from the throng to do so. To give way to our feelings before company, seems extravagance or affectation; and on the other hand, to have to unravel this mystery of our being at every turn, and to make others take an equal interest in it (otherwise the end is not answered) is a task to which few are competent. We must “give it an understanding, but no tongue.” My old friend C——, however, could do both. He could go on in the most delightful explanatory way over hill and dale, a summer’s day, and convert a landscape into a didactic poem or a Pindaric ode. “He talked far above singing.” If I could so clothe my ideas in sounding and flowing words, I might perhaps wish to have someone with me to admire the swelling theme; or I could be more content, were

it possible for me still to hear his echoing voice in the woods of All-Foxden. They had "that fine madness in them which our first poets had"; and if they could have been caught by some rare instrument, would have breathed such strains as the following.

——"Here be woods as green

As any, air likewise as fresh and sweet
As when smooth Zephyrus plays on the fleet
Face of the curled stream, with flow'rs as many
As the young spring gives, and as choice as any;
Here be all new delights, cool streams and wells,
Arbours o'ergrown with woodbine, caves and
dells;

Choose where thou wilt, while I sit by and sing,
Or gather rushes to make many a ring
For thy long fingers; tell thee tales of love,
How the pale Phœbe, hunting in a grove,
First saw the boy Endymion, from whose eyes
She took eternal fire that never dies;
How she convey'd him softly in a sleep,
His temples bound with poppy, to the steep
Head of old Latmos, where she stoops each night,
Gilding the mountain with her brother's light,
To kiss her sweetest."—

FAITHFUL SHEPHERDESS.

Had I words and images at command like these, I would attempt to wake the thoughts that lie slumbering on golden ridges in the evening clouds: but at the sight of nature my fancy, poor

as it is, droops and closes up its leaves, like flowers at sunset. I can make nothing out on the spot:—I must have time to collect myself.—

In general, a good thing spoils out-of-door prospects: it should be reserved for Table-talk. L—— is for this reason, I take it, the worst company in the world out of doors; because he is the best within. I grant, there is one subject on which it is pleasant to talk on a journey; and that is, what one shall have for supper when we get to our inn at night. The open air improves this sort of conversation or friendly altercation, by setting a keener edge on appetite. Every mile of the road heightens the flavour of the viands we expect at the end of it. How fine it is to enter some old town, walled and turreted just at the approach of night-fall, or to come to some straggling village, with the lights streaming through the surrounding gloom; and then after inquiring for the best entertainment that the place affords, to “take one’s ease at one’s inn!” These eventful moments in our lives’ history are too precious, too full of solid, heartfelt happiness to be frittered and dribbled away in imperfect sympathy. I would have them all to myself, and drain them to the last drop: they will do to talk of or to write about afterwards. What a delicate speculation it is, after drinking whole goblets of tea,

“The cups that cheer, but not inebriate,”

and letting the fumes ascend into the brain, to sit considering what we shall have for supper—eggs and a rasher, a rabbit smothered in onions, or an excellent veal-cutlet! Sancho in such a situation once fixed upon cow-heel; and his choice, though he could not help it, is not to be disparaged. Then in the intervals of pictured scenery and Shandean contemplation, to catch the preparation and the stir in the kitchen—*Procul, O procul este profani!* These hours are sacred to silence and to musing, to be treasured up in the memory, and to feed the source of smiling thoughts hereafter. I would not waste them in idle talk; or if I must have the integrity of fancy broken in upon, I would rather it were by a stranger than a friend. A stranger takes his hue and character from the time and place; he is a part of the furniture and costume of an inn. If he is a Quaker, or from the West Riding of Yorkshire, so much the better. I do not even try to sympathize with him, and he breaks no squares. I associate nothing with my travelling companion but present objects and passing events. In his ignorance of me and my affairs, I in a manner forget myself. But a friend reminds one of other things, rips up old grievances, and destroys the abstraction of the scene. He comes in ungraciously between us and our imaginary character. Some-

thing is dropped in the course of conversation that gives a hint of your profession and pursuits; or from having someone with you that knows the less sublime portions of your history, it seems that other people do. You are no longer a citizen of the world: but your "unhoused free condition is put into circumscription and confine." The *incognito* of an inn is one of its striking privileges—"lord of one's-self, uncumber'd with a name." Oh! it is great to shake off the trammels of the world and of public opinion—to lose our importunate, tormenting everlasting personal identity in the elements of nature, and become the creature of the moment, clear of all ties—to hold to the universe only by a dish of sweet-breads, and to owe nothing but the score of the evening—and no longer seeking for applause and meeting with contempt, to be known by no other title than *the Gentleman in the parlour*! One may take one's choice of all characters in this romantic state of uncertainty as to one's real pretensions, and become indefinitely respectable and negatively right-worshipful. We baffle prejudice and disappoint conjecture; and from being so to others, begin to be objects of curiosity and wonder even to ourselves. We are no more those hackneyed commonplaces that we appear in the world: an inn restores us to the level of nature, and quits scores with society! I have certainly spent some enviable hours at inns—sometimes when I have

been left entirely to myself, and have tried to solve some metaphysical problem, as once at Witham-common, where I found out the proof that likeness is not a case of the association of ideas—at other times, when there have been pictures in the room, as at St. Neot's, (I think it was) where I first met with Gribelin's engravings of the Cartoons, into which I entered at once, and at a little inn on the borders of Wales, where there happened to be hanging some of Westall's drawings, which I compared triumphantly (for a theory that I had, not for the admired artist) with the figure of a girl who had ferried me over the Severn, standing up in the boat between me and the twilight—at other times I might mention luxuriating in books, with a peculiar interest in this way, as I remember sitting up half the night to read Paul and Virginia, which I picked up at an inn at Bridgewater, after being drenched in the rain all day; and at the same place I got through two volumes of Madame D'Arblay's Camilla. It was on the tenth of April, 1798, that I sat down to a volume of the New Eloise, at the inn at Llangollen, over a bottle of sherry and a cold chicken. The letter I chose was that in which St. Preux describes his feelings as he first caught a glimpse from the heights of the Jura of the Pays de Vaud, which I had brought with me as a *bon bouche* to crown the evening with. It was my birth-day, and I

had for the first time come from a place in the neighbourhood to visit this delightful spot. The road to Llangollen turns off between Chirk and Wrexham; and on passing a certain point, you come all at once upon the valley, which opens like an amphitheatre, broad, barren hills rising in majestic state on either side, with "green upland swells that echo to the bleat of flocks" below, and the river Dee babbling over its stony bed in the midst of them. The valley at this time "glittered green with sunny showers," and a budding ash-tree dipped its tender branches in the chiding stream. How proud, how glad I was to walk along the high road that overlooks the delicious prospect, repeating the lines which I have just quoted from Mr. Coleridge's poems! But besides the prospect which opened beneath my feet, another also opened to my inward sight, a heavenly vision, on which were written, in letters large as Hope could make them, these four words, LIBERTY, GENIUS, LOVE, VIRTUE; which have since faded into the light of common day, or mock my idle gaze.

"The beautiful is vanished, and returns not."

Still I would return some time or other to this enchanted spot; but I would return to it alone. What other self could I find to share that influx of thoughts, of regret, and delight, the fragments of which I could hardly conjure up to

myself, so much have they been broken and defaced! I could stand on some tall rock, and overlook the precipice of years that separates me from what I then was. I was at that time going shortly to visit the poet whom I have above named. Where is he now? Not only I myself have changed; the world, which was then new to me, has become old and incorrigible. Yet will I turn to thee in thought, O sylvan Dee, in joy, in youth and gladness as thou then wert; and thou shalt always be to me the river of Paradise, where I will drink of the waters of life freely!

There is hardly anything that shows the shortsightedness or capriciousness of the imagination more than travelling does. With change of place we change our ideas; nay, our opinions and feelings. We can by an effort indeed transport ourselves to old and long-forgotten scenes, and then the picture of the mind revives again; but we forget those that we have just left. It seems that we can think but of one place at a time. The canvas of the fancy is but of a certain extent, and if we paint one set of objects upon it, they immediately efface every other. We cannot enlarge our conceptions, we only shift our point of view. The landscape bares its bosom to the enraptured eye, we take our fill of it, and seem as if we could form no other image of beauty or grandeur. We pass on, and think no more of it: the horizon that shuts it from our sight, also blots

it from our memory like a dream. In travelling through a wild barren country, I can form no idea of a woody and cultivated one. It appears to me that all the world must be barren, like what I see of it. In the country we forget the town, and in town we despise the country. "Beyond Hyde Park," says Sir Fopling Flutter, "all is a desert." All that part of the map that we do not see before us is a blank. The world in our conceit of it is not much bigger than a nutshell. It is not one prospect expanded into another, county joined to county, kingdom to kingdom, lands to seas, making an image voluminous and vast;—the mind can form no larger idea of space than the eye can take in at a single glance. The rest is a name written in a map, a calculation of arithmetic. For instance, what is the true signification of that immense mass of territory and population, known by the name of China to us? An inch of paste-board on a wooden globe, of no more account than a China orange! Things near us are seen of the size of life: things at a distance are diminished to the size of the understanding. We measure the universe by ourselves, and even comprehend the texture of our own being only piece-meal. In this way, however, we remember an infinity of things and places. The mind is like a mechanical instrument that plays a great variety of tunes, but it must play them in succession. One idea recalls

another, but it at the same time excludes all others. In trying to renew old recollections, we cannot as it were unfold the whole web of our existence; we must pick out the single threads. So in coming to a place where we have formerly lived and with which we have intimate associations, everyone must have found that the feeling grows more vivid the nearer we approach the spot, from the mere anticipation of the actual impression: we remember circumstances, feelings, persons, faces, names, that we had not thought of for years; but for the time all the rest of the world is forgotten!—To return to the question I have quitted above.

I have no objection to go to see ruins, aqueducts, pictures, in company with a friend or a party, but rather the contrary, for the former reason reversed. They are intelligible matters, and will bear talking about. The sentiment here is not tacit, but communicable and overt. Salisbury Plain is barren of criticism, but Stonehenge will bear a discussion antiquarian, picturesque, and philosophical. In setting out on a party of pleasure, the first consideration always is where we shall go to: in taking a solitary ramble, the question is what we shall meet with by the way. "The mind is its own place"; nor are we anxious to arrive at the end of our journey. I can myself do the honours indifferently well to works of art and curiosity. I once took a party to Ox-

ford with no mean *eclat*—shewed them that seat of the Muses at a distance,

“With glistering spires and pinnacles adorn’d”—
descanted on the learned air that breathes from the grassy quadrangles and stone walls of halls and colleges—was at home in the Bodleian; and at Blenheim quite superseded the powdered Ciceroni that attended us, and that pointed in vain with his wand to common-place beauties in matchless pictures.—As another exception to the above reasoning, I should not feel confident in venturing on a journey in a foreign country without a companion. I should want at intervals to hear the sound of my own language. There is an involuntary antipathy in the mind of an Englishman to foreign manners and notions that requires the assistance of social sympathy to carry it off. As the distance from home increases, this relief, which was at first a luxury, becomes a passion and an appetite. A person would almost feel stifled to find himself in the deserts of Arabia without friends and countrymen: there must be allowed to be something in the view of Athens or old Rome that claims the utterance of speech; and I own that the Pyramids are too mighty for any single contemplation. In such situations, so opposite to all one’s ordinary train of ideas, one seems a species by one’s-self, a limb torn off from society, unless one can meet with instant fellow-

ship and support.—Yet I did not feel this want or craving very pressing once, when I first set my foot on the laughing shores of France. Calais was peopled with novelty and delight. The confused, busy murmur of the place was like oil and wine poured into my ears; nor did the mariners' hymn, which was sung from the top of an old crazy vessel in the harbour, as the sun went down, send an alien sound into my soul. I only breathed the air of general humanity. I walked over "the vine-covered hills and gay regions of France," erect and satisfied; for the image of man was not cast down and chained to the foot of arbitrary thrones: I was at no loss for language, for that of all the great schools of painting was open to me. The whole is vanished like a shade. Pictures, heroes, glory, freedom, all are fled: nothing remains but the Bourbons and the French people! —There is undoubtedly a sensation in travelling into foreign parts that is to be had nowhere else: but it is more pleasing at the time than lasting. It is too remote from our habitual associations to be a common topic of discourse or reference, and, like a dream or another state of existence, does not piece into our daily modes of life. It is an animated but a momentary hallucination. It demands an effort to exchange our actual for our ideal identity; and to feel the pulse of our old transports revive very keenly, we must "jump" all our present comforts and connexions. Our

romantic and itinerant character is not to be domesticated. Dr. Johnson remarked how little foreign travel added to the facilities of conversation in those who had been abroad. In fact, the time we have spent there is both delightful and in one sense instructive; but it appears to be cut out of our substantial, downright existence, and never to join kindly on to it. We are not the same, but another, and perhaps more enviable individual, all the time we are out of our own country. We are lost to ourselves, as well as our friends. So the poet somewhat quaintly sings,

“Out of my country and myself I go.”

Those who wish to forget painful thoughts, do well to absent themselves for a while from the ties and objects that recall them: but we can be said only to fulfil our destiny in the place that gave us birth. I should on this account like well enough to spend the whole of my life in travelling abroad, if I could anywhere borrow another life to spend afterwards at home!—

WILLIAM HAZLITT.

TRAMPING IN THE ALPS *

THE things with most capacity to tire us are the things that we most delicately love. I had been roaming over Italy for many months, seeking forgotten frescoes in far-away hamlets and musing in the sanctity of churches; and when at last I reached Milan I longed eagerly never to look upon another picture nor to enter another church in all my life. My æsthetic sensibilities were tired—so tired that I actually stood in front of the multitudinous cathedral of Milan and called it a birthday-cake with candles—so tired that, although I had come to town expressly to study the paintings of Luini, I could never bring myself within less than a block of them without wheeling about and hurrying away. My friend Dick was tired also. Every afternoon he deliberately went to bed, in order to prevent himself from seeing the “Last Supper” of Leonardo. Once or twice I reminded him that Leonardo was his favourite painter. He merely answered, “Go away!”

When people are as tired as that, they need to take a walk. I suggested this to Dick one eve-

* From “Wanderings” by permission of the author.

ning over coffee. He liked the thought of something that might be done with feet instead of brains. "We'll walk," said he.

It occurred to me that Switzerland was near. "Any paintings there?" he asked, suspiciously.

"Not one."

"Any architecture?"

"Nothing but châteaux."

"Thank Heaven!" he breathed. "We'll start to-morrow morning."

We bought knapsacks, into which we flung such necessities as a toothbrush, a pipe, and a pocket R. L. S.; we had our shoes shod with heavy iron nails; we arrayed ourselves in rowing shirts and sweaters, golf trousers and leather leggings; we purchased alpenstocks; and we confided our baggage to a tourist company's agent, telling him vaguely to send it anywhere in France and to let us know where it was when it got there.

A train dragged us to Arona, at the foot of the Lago Maggiore; and a steamer slid us up the lake to Locarno, the first town in Switzerland. Dick and I had heard of a city named Lucerne and knew from pictures that it sat beside a lake. Somehow we supposed that we must be going thither. So, stumbling on a British tourist, we asked him, "Where is Lake Lucerne?"

He gasped, amazed, and sputtered that it was half of Switzerland away.

"Quite so," said Dick. "How do you walk to it?"

The British tourist made a noise like a seltzer bottle, shuffled the pages of his Baedeker, and said that we should have to cross the St. Gothard Pass. Then he read altitudes in metres and distances in miles. At last a native slouched along to save us.

"Which is the way to the St. Gothard?" I inquired.

The native was wise. He waved an arm at the Ticino River. "Follow that," said he.

We followed the Ticino for two days, all the way from its mouth to its source. That was how we found the pass. You can find anything in Switzerland, if only you will let the rivers guide you. They know much more about geography than British tourists. And they are wise in other ways. For instance, the Ticino taught us the jocund sport of Progressive Bathing. The sport is this. At a certain hour every day you throw off all your clothes and leap into the river you are following. You don't have to swim; the current swims for you. But the fun lies in the fact that each day the river is more narrow and more swift than it was the day before. Also it is much more cold. And the same stream that gave you a warm reception at its mouth is most forbiddingly frigid where it trickles from a glacier at its source.

The St. Gothard was our first pass, and we rushed at it with the eagerness of novices. I had never climbed a mountain before that, and supposed that the thing to do was just to walk up its slope. This I tried, until suddenly I slid backward many yards upon my chest, eating earth. Dick imbibed wisdom from my declension, and amazingly discovered that there were such things as trails. After that we climbed more circumspectly.

In the little tavern at the top, where we swallowed beer and cheese, wise ones told us of a stream whose name was Reuss. This was thin and guttery at first; but if only you had faith in it, it would lead you all the way to Lake Lucerne. It was hard to believe in the Reuss, where it issued from a puddle of a pond; but we obeyed the wise ones. It led us down and ever down through a gash in the mountains more desolate than any other I had ever seen. At last it lured us to a valley that had the virtue of homeliness and was inhabited by towns with German names. Between Andermatt and Goschenen it gathered to a torrent and roared over a cataract beneath the Devil's Bridge. Here we rested. If we had been old and wise, we should have spent that night in Goschenen; but being young, we did not know that we were weary, and resolved to lunge on to Amsteg. I shall never forget the delicious utter physical fatigue of the

last few miles. I had no brain. Neither had Dick. He monotonously chanted old Ben Jonson's song, and whenever he came to "Not of itself but thee," he reverted to the first stanza and commenced all over again. Time and time again he drank to me only with his eyes; and to the reiterated rhythm of his droning we dragged our weary legs to Amsteg.

Here we fell into seats at table, and devoured. I don't think that I had ever really eaten before that. At any rate, I had never fully realized the divinity of food. So magnificently did we eat that it was only when we tried to rise from the table that we discovered that our legs had tightened stiff. The landlord and the landlord's son had to carry us to bed; and while Dick was groaning wearily, "I sent thee late a rosy wreath," I sank into immeasurable slumber.

In the morning we arose and tramped very agedly to Flüelen, the first port of Lake Lucerne. Here we met a polite steamboat that said it was willing to let us sit down all the length of the lake; and we accepted its gracious invitation. Surely that day, of all days, we had a rush of weariness to the feet, a transit that is wholesome for the brain.

Lucerne itself, at the western end of the lake, is a happy holiday of a city, all roofs and spires, behind which the iron-hued Pilatus rises dark. It is a place where natives sing at night in taverns

beside a rushing river; and where tourists wear clothes and buy things. Here Dick and I loitered for a day or two, because of broken feet—painting them with various kinds of new skin and trying (vainly) to forget them.

Later we forged southwesterly to Interlaken, which is a sort of Saratoga of a place, chiefly notable as a starting point for other places that are beautiful. From there we started on the accustomed tramp up the valley to Lauterbrunnen, in full view of the moon-white Jungfrau, that saintliest of mountains. Lauterbrunnen is memorable chiefly for the Staubbach—a shower-bath of a brook that falls scattery, sheer down a precipitous cliff. On top of that cliff, which we climbed by a serpentine earthy trail, is flung a handful of houses called Mürren. It is a homely little settlement, tinkly with cattle bells; but it affords one of the sublimest views in all the Alps. For across the valley stand unveiled the white peaks of the Bernese Overland—the Jungfrau, and the Eiger, and the Mönch—monarchical, serene, stupendous. We gained a nearer but less massy view of these by dropping down to Lauterbrunnen once again and crawling up over the shoulder of the Wengern Alp on the other side of the valley.

No other range of peaks in Switzerland can vie in sublimity with the Bernese Overland, except the Alps of the Valais. Thither, by gradual

tramps, we made our way. We settled at Zermatt, a town hidden deep in the valley of the Visp—a valley running narrow, north and south, and therefore darkling in its depths except at noon. Zermatt is merely a place to climb out of. We spent a morning scrambling up over the humpy flanks of the Gorner Grat, until at last we sat upon its summit. There, finally, in the wide air, we felt ourselves upon the roof of the world. Enormous, to the south of us, rose the everlasting whiteness of the Breithorn and the Monte Rosa, gashed and gouged with rivers of ice; and westward stood alone the Matterhorn, sharp and dark—most terrible of mountains.

We gazed for hours silent, and were healed.

“Now we can go back to Italy,” said Dick.

CLAYTON HAMILTON.

A BY-PATH IN SPAIN

IT was four o'clock of a beautiful morning when we* sallied from Astorga, or rather from its suburbs, in which we had been lodged: we directed our course to the north, in the direction of Galicia. Leaving the mountain Telleno on our left, we passed along the eastern skirts of the land of the Maragatos, over broken uneven ground, enlivened here and there by small green valleys and runnels of water. Several of the Maragatan women, mounted on donkeys, passed us on their way to Astorga, whither they were carrying vegetables. We saw others in the fields handling their rude ploughs, drawn by lean oxen. We likewise passed through a small village, in which we, however, saw no living soul. Near this village we entered the high road which leads direct from Madrid to Coruña, and at last, having travelled near four leagues, we came to a species of pass, formed on our left by a huge lumpish hill, (one of those which descend from the great mountain Telleno,) and on our right by one of much less altitude. In the middle of this pass, which was of considerable breadth, a noble

* George Barrow and his servant, Antonio.

view opened itself to us. Before us, at the distance of about a league and a half, rose the mighty frontier chain, of which I have spoken before; its blue sides and broken and picturesque peaks still wearing a thin veil of the morning mist, which the fierce rays of the sun were fast dispelling. It seemed an enormous barrier, threatening to oppose our farther progress, and it reminded me of the fables respecting the children of Magog, who are said to reside in remotest Tartary, behind a gigantic wall of rocks, which can only be passed by a gate of steel a thousand cubits in height.

We shortly after arrived at Manzanal, a village consisting of wretched huts, and exhibiting every sign of poverty and misery. It was now time to refresh ourselves and horses, and we accordingly put up at a venta, the last habitation in the village, where, though we found barley for the animals, we had much difficulty in procuring anything for ourselves. I was at length fortunate enough to obtain a large jug of milk, for there were plenty of cows in the neighbourhood, feeding in a picturesque valley which we had passed by, where was abundance of grass and trees, and a rivulet broken by tiny cascades. The jug might contain about half-a-gallon, but I emptied it in a few minutes, for the thirst of fever was still burning within me, though I was destitute of appetite. The venta had something

the appearance of a German baiting-house. It consisted of an immense stable, from which was partitioned a kind of kitchen and a place where the family slept. The master, a robust young man, lolled on a large solid stone bench, which stood within the door. He was very inquisitive respecting news, but I could afford him none; whereupon he became communicative, and gave me the history of his life, the sum of which was, that he had been a courier in the Basque provinces, but about a year since had been dispatched to this village, where he kept the post-house. He was an enthusiastic liberal, and spoke in bitter terms of the surrounding population, who, he said, were all Carlists and friends of the friars. I paid little attention to his discourse, for I was looking at a Maragato lad of about fourteen, who served in the house as a kind of ostler. I asked the master if we were still in the land of the Maragatos; but he told me that we had left it behind nearly a league, and that the lad was an orphan, and was serving until he could rake up a sufficient capital to become an arriero. I addressed several questions to the boy, but the urchin looked sullenly in my face, and either answered by monosyllables or was doggedly silent. I asked him if he could read. "Yes," said he, "as much as that brute of yours who is tearing down the manger."

Quitting Manzanal, we continued our course.

the appearance of a German baiting-house. It consisted of an immense stable, from which was partitioned a kind of kitchen and a place where the family slept. The master, a robust young man, lolled on a large solid stone bench, which stood within the door. He was very inquisitive respecting news, but I could afford him none; whereupon he became communicative, and gave me the history of his life, the sum of which was, that he had been a courier in the Basque provinces, but about a year since had been dispatched to this village, where he kept the post-house. He was an enthusiastic liberal, and spoke in bitter terms of the surrounding population, who, he said, were all Carlists and friends of the friars. I paid little attention to his discourse, for I was looking at a Maragato lad of about fourteen, who served in the house as a kind of ostler. I asked the master if we were still in the land of the Maragatos; but he told me that we had left it behind nearly a league, and that the lad was an orphan, and was serving until he could rake up a sufficient capital to become an arriero. I addressed several questions to the boy, but the urchin looked sullenly in my face, and either answered by monosyllables or was doggedly silent. I asked him if he could read. "Yes," said he, "as much as that brute of yours who is tearing down the manger."

Quitting Manzanal, we continued our course.

We soon arrived at the verge of a deep valley amongst mountains, not those of the chain which we had seen before us, and which we now left to the right, but those of the Telleno range, just before they unite with that chain. Round the sides of this valley, which exhibited something of the appearance of a horse-shoe, wound the road in a circuitous manner; just before us, however, and diverging from the road, lay a footpath which seemed, by a gradual descent, to lead across the valley, and to rejoin the road on the other side, at the distance of about a furlong; and into this we struck in order to avoid the circuit.

We had not gone far before we met two Galicians, on their way to cut the harvests of Castile. One of them shouted, "Cavalier, turn back: in a moment you will be amongst precipices, where your horses will break their necks, for we ourselves could scarcely climb them on foot." The other cried, "Cavalier, proceed, but be careful, and your horses, if sure-footed, will run no great danger: my comrade is a fool." A violent dispute instantly ensued between the two mountaineers, each supporting his opinion with loud oaths and curses; but without stopping to see the result, I passed on, but the path was now filled with stones and huge slaty rocks, on which my horse was continually slipping. I likewise heard the sound of water in a deep gorge, which I had hitherto not perceived, and I soon saw that it

would be worse than madness to proceed. I turned my horse, and was hastening to regain the path which I had left, when Antonio, my faithful Greek, pointed out to me a meadow by which, he said, we might regain the high road much lower down than if we returned on our steps. The meadow was brilliant with short green grass, and in the middle there was a small rivulet of water. I spurred my horse on, expecting to be in the high road in a moment; the horse, however, snorted and stared wildly, and was evidently unwilling to cross the seemingly inviting spot. I thought that the scent of a wolf, or some other wild animal might have disturbed him, but was soon undeceived by his sinking up to the knees in a bog. The animal uttered a shrill sharp neigh, and exhibited every sign of the greatest terror, making at the same time great efforts to extricate himself, and plunging forward, but every moment sinking deeper. At last he arrived where a small vein of rock showed itself: on this he placed his forefeet, and with one tremendous exertion freed himself from the deceitful soil, springing over the rivulet and alighting on comparatively firm ground, where he stood panting, his heaving sides covered with a foamy sweat. Antonio, who had observed the whole scene, afraid to venture forward, returned by the path by which we came, and shortly afterwards rejoined me. This adventure brought to my recol-

lection the meadow with its footpath which tempted Christian from the straight road to heaven, and finally conducted him to the dominions of the Giant Despair.

We now began to descend the valley by a broad and excellent *carretera* or carriage road, which was cut out of the steep side of the mountain on our right. On our left was the gorge, down which tumbled the runnel of water which I have before mentioned. The road was tortuous, and at every turn the scene became more picturesque. The gorge gradually widened, and the brook at its bottom, fed by a multitude of springs, increased in volume and in sound, but it was soon far beneath us, pursuing its headlong course till it reached level ground, where it flowed in the midst of a beautiful but confined prairie. There was something sylvan and savage in the mountains on the farther side, clad from foot to pinnacle with trees, so closely growing that the eye was unable to obtain a glimpse of the hillsides, which were uneven with ravines and gulleys, the haunts of the wolf, the wild boar, and the corso, or mountain-stag; the latter of which, as I was informed by a peasant who was driving a car of oxen, frequently descended to feed in the prairie, and were there shot for the sake of their skins, for the flesh, being strong and disagreeable, is held in no account.

But notwithstanding the wildness of these

regions, the handiworks of man were visible. The sides of the gorge, though precipitous, were yellow with little fields of barley, and we saw a hamlet and church down in the prairie below, whilst merry songs ascended to our ears from where the mowers were toiling with their scythes, cutting the luxuriant and abundant grass. I could scarcely believe that I was in Spain, in general so brown, so arid, and cheerless, and I almost fancied myself in Greece, in that land of ancient glory, whose mountain and forest scenery Theocritus has so well described.

At the bottom of the valley we entered a small village, washed by the brook, which had now swelled almost to a stream. A more romantic situation I had never witnessed. It was surrounded, and almost overhung, by mountains, and embowered in trees of various kinds; waters sounded, nightingales sang, and the cuckoo's full note boomed from the distant branches, but the village was miserable. The huts were built of slate stones, of which the neighbouring hills seemed to be principally composed, and roofed with the same, but not in the neat tidy manner of English houses, for the slates were of all sizes, and seemed to be flung on in confusion. We were spent with heat and thirst, and sitting down on a stone bench, I entreated a woman to give me a little water. The woman said she would, but added that she expected to be paid for it. Antonio,

on hearing this, became highly incensed, and speaking Greek, Turkish, and Spanish, invoked the vengeance of the Panhagia on the heartless woman, saying, "If I were to offer a Mahometan gold for a draught of water he would dash it in my face; and you are a Catholic, with the stream running at your door." I told him, to be silent, and giving the woman two cuartos, repeated my request, whereupon she took a pitcher, and going to the stream filled it with water. It tasted muddy and disagreeable, but it drowned the fever which was devouring me.

We again remounted and proceeded on our way, which, for a considerable distance, lay along the margin of the stream, which now fell in small cataracts, now brawled over stones, and at other times ran dark and silent through deep pools overhung with tall willows,—pools which seemed to abound with the finny tribe, for large trout frequently sprang from the water, catching the brilliant fly which skimmed along its deceitful surface. The scene was delightful. The sun was rolling high in the firmament, casting from its orb of fire the most glorious rays, so that the atmosphere was flickering with their splendour, but their fierceness was either warded off by the shadow of the trees or rendered innocuous by the refreshing coolness which rose from the waters, or by the gentle breezes which murmured at intervals over the meadows, "fan-

ning the cheek or raising the hair" of the wanderer. The hills gradually receded, till at last we entered a plain where tall grass was waving, and mighty chestnut trees, in full blossom, spread out their giant and umbrageous boughs. Beneath many stood cars, the tired oxen prostrate on the ground, the crossbar of the poll which they support pressing heavily on their heads, whilst their drivers were either employed in cooking, or were enjoying a delicious siesta in the grass and shade. I went up to one of the largest of these groups and demanded of the individuals whether they were in need of the Testament of Jesus Christ. They stared at one another, and then at me, till at last a young man, who was dangling a long gun in his hands as he reclined, demanded of me what it was, at the same time inquiring whether I was a Catalan, "For you speak hoarse," said he, "and are tall and fair like that family." I sat down amongst them and said that I was no Catalan, but that I came from a spot in the Western Sea, many leagues distant, to sell that book at half the price it cost; and that their souls' welfare depended on their being acquainted with it. I then explained to them the nature of the New Testament, and read to them the parable of the Sower. They stared at each other again, but said that they were poor and could not buy books. I rose, mounted, and was going away, saying to them: "Peace bide with you."

Whereupon the young man with the gun rose, and saying, "*Caspita!* this is odd," snatched the book from my hand and gave me the price I had demanded.

Perhaps the whole world might be searched in vain for a spot whose natural charms could rival those of this plain or valley of Bemibre, as it is called, with its wall of mighty mountains, its spreading chestnut trees, and its groves of oaks and willows, which clothe the banks of its stream, a tributary to the Minho. True it is, that when I passed through it, the candle of heaven was blazing in full splendour, and everything lighted by its rays looked gay, glad, and blessed. Whether it would have filled me with the same feelings of admiration if viewed beneath another sky I will not pretend to determine; but it certainly possesses advantages which at no time could fail to delight, for it exhibits all the peaceful beauties of an English landscape blended with something wild and grand, and I thought within myself, that he must be a restless dissatisfied man, who, born amongst those scenes, would wish to quit them. At the time, I would have desired no better fate than that of a shepherd on the prairies, or a hunter on the hills of Bemibre.

Three hours passed away, and we were in another situation. We had halted and refreshed ourselves and horses at Bemibre, a village of mud and slate, and which possessed little to at-

tract attention: we were now ascending, for the road was over one of the extreme ledges of these frontier hills which I have before so often mentioned; but the aspect of heaven had blackened, clouds were rolling rapidly from the west over the mountains, and a cold wind was moaning dismally. "There is a storm travelling through the air," said a peasant, whom we overtook, mounted on a wretched mule; "and the Asturians had better be on the look-out, for it is speeding in their direction." He had scarce spoken, when a light, so vivid and dazzling that it seemed as if the whole lustre of the fiery element were concentrated in it, broke around us, filling the whole atmosphere, and covering rock, tree, and mountain with a glare not to be described. The mule of the peasant tumbled prostrate, while the horse I rode reared himself perpendicularly, and turning round, dashed down the hill at headlong speed, which for some time it was impossible to check. The lightning was followed by a peal almost as terrible, but distant, for it sounded hollow and deep; the hills, however, caught up its voice, seemingly repeating it from summit to summit, till it was lost in interminable space. Other flashes and peals succeeded, but slight in comparison, and a few drops of rain descended. The body of the tempest seemed to be over another region. "A hundred families are weeping where that bolt fell," said the peasant when I

rejoined him, "for its blaze has blinded my mule at six leagues' distance." He was leading the animal by the bridle, as its sight was evidently affected. "Were the friars still in their nest above there," he continued, "I should say that this was their doing, for they are the cause of all the miseries of the land."

I raised my eyes in the direction in which he pointed. Half-way up the mountain, over whose feet we were wending, jutted forth a black frightful crag, which at an immense altitude overhung the road, and seemed to threaten destruction. It resembled one of those ledges of the rocky mountains in the picture of the Deluge, up to which the terrified fugitives have scrambled from the eager pursuit of the savage and tremendous billows, and from whence they gaze down in horror, whilst above them rise still higher and giddier heights, to which they seem unable to climb. Built on the very edge of this crag stood an edifice, seemingly devoted to the purposes of religion, as I could discern the spire of a church rearing itself high over wall and roof. "That is the house of the Virgin of the Rocks," said the peasant, "and it was lately full of friars, but they have been thrust out, and the only inmates now are owls and ravens." I replied, that their life in such a bleak exposed abode could not have been very enviable, as in winter they must have incurred great risk of perishing with cold. "By no

means," said he; "they had the best of wood for their braseros and chimneys, and the best of wine to warm them at their meals, which were not the most sparing. Moreover, they had another convent down in the vale yonder, to which they could retire at their pleasure." On my asking him the reason of his antipathy to the friars, he replied, that he had been their vassal, and that they had deprived him every year of the flower of what he possessed. Discoursing in this manner, we reached a village just below the convent, where he left me, having first pointed out to me a house of stone, with an image over the door, which, he said, once also belonged to the canalla (*rabble*) above.

The sun was setting fast, and eager to reach Villafranca, where I had determined on resting, and which was still distant three leagues and a half, I made no halt at this place. The road was now down a rapid and crooked descent, which terminated in a valley, at the bottom of which was a long and narrow bridge; beneath it rolled a river, descending from a wide pass between two mountains, for the chain was here cleft, probably by some convulsion of nature. I looked up the pass, and on the hills on both sides. Far above, on my right, but standing forth bold and clear, and catching the last rays of the sun, was the Convent of the Precipices, whilst directly over against it, on the farther side of the valley,

rose the perpendicular side of the rival hill, which, to a considerable extent intercepting the light, flung its black shadow over the upper end of the pass, involving it in mysterious darkness. Emerging from the centre of this gloom, with thundering sound, dashed a river, white with foam, and bearing along with it huge stones and branches of trees, for it was the wild Sil hurrying to the ocean from its cradle in the heart of the Asturian hills, and probably swollen by the recent rains.

Hours again passed away. It was now night, and we were in the midst of woodlands, feeling our way, for the darkness was so great that I could scarcely see the length of a yard before my horse's head. The animal seemed uneasy, and would frequently stop short, prick up his ears, and utter a low mournful whine. Flashes of sheet lightning frequently illumined the black sky, and flung a momentary glare over our path. No sound interrupted the stillness of the night, except the slow tramp of the horse's hoofs, and occasionally the croaking of frogs from some pool or morass. I now bethought me that I was in Spain, the chosen land of the two fiends, assassination and plunder, and how easily two tired and unarmed wanderers might become their victims.

We at last cleared the woodlands, and after proceeding a short distance, the horse gave a joyous neigh, and broke into a smart trot. A

barking of dogs speedily reached my ears, and we seemed to be approaching some town or village. In effect, we were close to Cacabelos, a town about five miles distant from Villafranca.

It was near eleven at night, and I reflected that it would be far more expedient to tarry in this place till the morning than to attempt at present to reach Villafranca, exposing ourselves to all the horrors of darkness in a lonely and unknown road. My mind was soon made up on this point; but I reckoned without my host, for at the first posada which I attempted to enter, I was told that we could not be accommodated, and still less our horses, as the stable was full of water. At the second, and there were but two, I was answered from the window by a gruff voice, nearly in the words of the Scripture: "Trouble me not: the door is now shut, and my children are with me in bed; I cannot arise to let you in." Indeed, we had no particular desire to enter, as it appeared a wretched hovel, though the poor horses pawed piteously against the door, and seemed to crave admittance.

We had now no choice but to resume our doleful way to Villafranca, which, we were told, was a short league distant, though it proved a league and a half. We found it no easy matter to quit the town, for we were bewildered amongst its labyrinths, and could not find the outlet. A lad about eighteen was, however, per-

suaded, by the promise of a pesta, to guide us: whereupon he led us by many turnings to a bridge, which he told us to cross, and to follow the road, which was that of Villafranca; he then, having received his fee, hastened from us.

We followed his directions, not, however, without a suspicion that he might be deceiving us. The night had settled darker down upon us, so that it was impossible to distinguish any object, however nigh. The lightning had become more faint and rare. We heard the rustling of trees, and occasionally the barking of dogs, which last sound, however, soon ceased, and we were in the midst of night and silence. My horse, either from weariness or the badness of the road, frequently stumbled; whereupon I dismounted, and leading him by the bridle, soon left Antonio far in the rear.

I had proceeded in this manner a considerable way, when a circumstance occurred of a character well suited to the time and place.

I was again amidst trees and bushes, when the horse stopping short, nearly pulled me back. I knew not how it was, but fear suddenly came over me, which, though in darkness and in solitude, I had not felt before. I was about to urge the animal forward, when I heard a noise at my right hand, and listened attentively. It seemed to be that of a person or persons forcing their way through branches and brushwood. It soon

ceased, and I heard feet on the road. It was the short staggering kind of tread of people carrying a very heavy substance, nearly too much for their strength, and I thought I heard the hurried breathing of men over-fatigued. There was a short pause, during which I conceived they were resting in the middle of the road; then the stamping recommenced, until it reached the other side, when I again heard a similar rustling amidst branches; it continued for some time and died gradually away.

I continued my road, musing on what had just occurred, and forming conjectures as to the cause. The lightning resumed its flashing, and I saw that I was approaching tall black mountains.

This nocturnal journey endured so long that I almost lost all hope of reaching the town, and had closed my eyes in a doze, though I still trudged on mechanically, leading the horse. Suddenly a voice at a slight distance before me roared out, "*Quien vive?*" for I had at last found my way to Villafranca. It proceeded from the sentry in the suburb, one of those singular half soldiers half guerillas, called Miguelets, who are in general employed by the Spanish government to clear the roads of robbers. I gave the usual answer, "*España,*" and went up to the place where he stood. After a little conversation, I sat down on a stone, awaiting the arrival of Antonio, who was

long in making his appearance. On his arrival, asked if anyone had passed him on the road, but he replied that he had seen nothing. The night or rather the morning, was still very dark, though a small corner of the moon was occasionally visible. On our inquiring the way to the gate, the Migulet directed us down a street to the left which we followed. The street was steep, we could see no gate, and our progress was soon stopped by houses and wall. We knocked at the gates of two or three of these houses, (in the upper stories of which lights were burning), for the purpose of being set right, but we were either disregarded or not heard. A horrid squalling of cats, from the tops of the houses and dark corners saluted our ears, and I thought of the night arrival of Don Quixote and his squire at Toboso and their vain search amongst the deserted street for the palace of Dulcinea. At length we saw light and heard voices in a cottage at the other side of a kind of ditch. Leading the horses over, we called at the door, which was opened by an aged man, who appeared by his dress to be a baker, as indeed he proved, which accounted for his being up at so late an hour. On begging him to show us the way into the town, he led us up a very narrow alley at the end of his cottage, saying that he would likewise conduct us to the posada.

The alley led directly to what appeared to be the market-place, at a corner house of which our

guide stopped and knocked. After a long pause an upper window was opened, and a female voice demanded who we were. The old man replied, that two travellers had arrived who were in need of lodging. "I cannot be disturbed at this time of night," said the woman; "they will be wanting supper, and there is nothing in the house; they must go elsewhere." She was going to shut the window, but I cried that we wanted no supper, but merely a resting place for ourselves and horses—that we had come that day from Astorga, and were dying with fatigue. "Who is that speaking?" cried the woman. "Surely that is the voice of Gil, the German clock-maker from Pontevedra. Welcome, old companion; you are come at the right time, for my own is out of order. I am sorry I have kept you waiting, but I will admit you in a moment."

The window was slammed to, presently a light shone through the crevices of the door, a key turned in the lock, and we were admitted.

GEORGE BORROW.

ON BOARD THE *VAUDREUIL* *

*At sea (at the mouth of the Amazon),
August, 1871.*

TO-NIGHT, as I began my watch, a phrase of music came to my memory and it was with the greatest difficulty that I could determine in what corner of the globe and at what part of my life I could have heard it. There is no tune which does not awaken thousands of memories in us. This one confusedly brought back choruses of human voices in the distance, something like a procession winding by with chants and music. And until three o'clock in the morning I unsuccessfully racked my brain, I dug down into my memories (which, at any rate, is a very pleasant occupation during a night watch). All kinds of people passed before me, ceremonies in all sorts of cities spread over the world's surface. . . . Was it some religious hymn heard at night in passing a mosque?—or maybe some group of white burnoose wearers winding through the crooked streets of some Arabian city? Some sad song of Nubian women, under the hot sun of the equator?—or possibly a patriotic hymn of the people of the North, of Denmark or of

* From "Notes on My Youth."

Canada? It may have been an Indian feast song—Polynesian or Chinese? A fantastic nocturnal Negro dance? . . . Unless it was just the chorus of an opera? . . . But still it seems to carry with it a vague remembrance of guitars and mandolins, with a bit of warm wind from Spain or Portugal. . . .

Magellan, September, 1871.

The Straits of Magellan have become a very important thoroughfare for steamers; but nowhere as yet do the two dark shores of this wide strait bear any traces of civilization, and those sailors who, in passing, land there, can expect no help from such an inhospitable country.

On coming from the Atlantic, when one enters the narrow channels which separate Patagonia from Tierra del Fuego, one is struck at once with the desolate aspect of nature. The first part of the voyage is between two vast plains, absolutely bare and deserted, especially at this time of year, which is the austral winter; frozen swamps everywhere, with their monotony broken only here and there by splotches of snow. They are enormous hunting areas used from time to time by bands of Patagonian nomads.

As one gets farther south, however, the country gradually changes its aspect and takes on another kind of desolation. Hills begin to rise and to be covered with a dark and cold-looking

growth; groups of resinous trees, with black evergreen foliage, become more numerous and end by forming an impenetrable whole. One is soon surrounded by thick forests, above which snow-covered peaks or glacier edges stand out against a dark sky.

The horizon lengthens and the vistas show a striking grandeur; the ship continues its quiet course amid a veritable maze of mountains, of deep bays, of tiny green islands; clouds, which seem blacker than those of our French sky, spread their great shadows over the land, to which fog banks give an infinite variety.

A shapeless ruin, which is the only vestige of human building on this coast of Patagonia, serves as a landmark for the passing ships; it is what is left to-day of Port Famine, a long-since abandoned attempt at European occupation, the name of which was scarcely attractive!

Cape Forward, the very end of the American continent, is a little farther south. It was in the shelter of this cape, in big Saint Nicholas Bay, that we lowered anchor and landed for the first time.

The surrounding country was entirely untouched, covered all over with an unbelievable tangle of forests, whose beautiful growth was half hidden by snow.

In the midst of this solitude, however, a thin

curl of smoke showed the presence of human beings, and we went over toward it.

We found curious savages who live in the large island of the south and who are radically different from the Indian people of the continent. These ichthyophagous Fuegians are, from every aspect, on the lowest round of the human ladder and the Patagonians treat them like harmful animals when they come upon them.

We found them grouped about their huts made of branches in an exquisite site on the shore of a clear river: piles of shells and remnants of fish showed that the group had been comfortable and had made a long stay there.

These people were very much afraid of us. Aroused from their shelter, their first reaction was to flee; their second, to ask for food, and a gift of some crackers made them mad with joy.

Small, frail, stiff with cold and uglier than would seem possible, they nevertheless promptly became not only friendly but even humorous!

Our trust in them was very limited, however, and we soon left them, taking with us as a remembrance some knives made of human bones with which to open shells, their only industrial product.

Tierra del Fuego, September, 1871.

The whole western part of that mountainous island, Tierra del Fuego, is covered with virgin forests, practically impenetrable. The sky is overcast and its climate compares with that of the coldest parts of Europe.

One can barely get about by holding on to the branches, through these ageless forests encumbered with dead trees; the ground is covered with rotten vegetation piled up for centuries in which one sinks almost out of sight. In this perpetual forest darkness the lichens have achieved an enormous growth, and everything is swamped under thick layers of these mournful grey mosses.

A singularly sinister atmosphere reigns in this inanimate place during the sombre winter days. One's heart fails him amid this silence and solitude.

After having hunted with difficulty and at length in this country, we came one day upon something for which we were not looking—a band of natives in a state the primitiveness of which far surpassed anything we had so far seen: a state of complete wildness. It occurred one winter's morning, in the woods at the end of a hidden bay, where probably no European had ever penetrated before. The presence of these people was indicated to us by the sound of voices in an unknown key; advancing quietly through the thick underbrush, we presently came

upon them, beholding a scene of hideous novelty.

These savages, either sitting or perched on branches, were eating their morning meal with the voraciousness of starved beasts; their dreadful dogs, who were eating with them, had not perceived us and so we could look at them for an instant without being seen.

The main feature of this breakfast consisted of mussels and various shell fish from the bay; but we also saw fragments of two penguins which these hungry people had not felt the necessity of cooking; repulsive young women were even biting into the unplucked wings.

Our arrival produced a terrific effect upon this family, which manifested itself at first by wild gestures and loud cries; then they all, in the wink of an eyelash, slipped and disappeared into the surrounding brush, and one heard nothing but a jerky noise from their throats, not unlike the noise made by furious monkeys.

We easily pacified them, as we had pacified others like them in Saint Nicholas Bay, by offering them crackers and bread.

We were promptly surrounded, examined, and touched with a great deal of curiosity; these people found us extraordinary and ridiculous to be dressed; they exchanged comments with an inimitably comic expression. Their hideous thin square heads were all cut from the same pattern, as happens with inferior unmixed races;

their reddish brown hair—a colour frequently found in these Indian people—was long about their necks, short and bristly over their foreheads and on the crowns of their heads. Their entire costume consisted of long-haired coats of skins; neither the sharp cold nor any thought of modesty urged them to cover their ugly bodies, which were oiled with fish fat.

The canoes which had brought them there were made of several boards roughly made and joined; we found nets of braided reeds, knives made of bones, as in the Stone Age, arrows and penguin eggs.

Our curiosity was aroused by a bundle of furs which they had hidden, but when we wanted to touch these, the women fell upon us with threats and cries. It turned out to be two tiny children, asleep in fox skins. We perceived that these mothers possessed the same amount of love for their young as do animals, and this raised them considerably in our estimation.

The southern coasts of Tierra del Fuego, swept by great snowdrifts and terrible winds, are completely barren; and on the most austral islands of the group, among them being the one which bounds Cape Horn, there is nothing but naked rock, given over to penguins and seals. These are highly dangerous seas, constantly whipped by huge waves and greatly feared by sailors.

Among these lands, Desolation Island seems to present an especially heart-rending waste and justifies in every particular the name which was given it. Vegetation is meagre and scarce, and one walks among doleful solitudes beset with lichens; in the far distance one sees a few decayed forests or even dead trees whose skeletons assume queer shapes blanched and twisted by the wind; and one always feels a damp and depressing cold. More than that, there is no life, and everywhere there is the same dreadful silence.

Cape Horn, October, 1871.

A young seal was joyfully gambolling alongside the ship, but nothing seemed to justify such gaiety. We were at anchor between bare grey cliffs; Cape Horn's terrible wind whistled overhead, rapidly driving before it large black clouds in an already dark sky, and behind the dreary rocks which sheltered us from the open sea one could hear the waves roaring as always in bad weather. We were lifted by the swell even at the extremity of this dismal bay in which the water, icy cold and dark green, was striped with long streaks of white foam.

Everything seemed sinister and exiled about us, even the families of white-bellied penguins who formed ranks on each little island.

And still the young seal played joyously in the freezing water, and its happiness was touching in such surroundings.

He had a pretty, brown plump body, shining like polished agate. Between dives one saw his sly little head emerge, decorated with the handsome moustaches of a large cat; then he would puff and sneeze like children who shake the little drops of water from their noses when they bathe.

The sailors began throwing him bits of fish, which he caught on the fly with the skill of a young clown. Then, as though thanking them, he gave them a little comedy, performing many leaps and graceful turns on the waves: one almost felt as though he were doing it for his audience, to amuse his benefactors.

Surely the poor little thing had never seen a ship; he came nearer and nearer, full of confidence, and the men were thinking of catching him, which would surely not have been difficult. But a shot rang out, the young seal gave one surprised look and performed his last twirl. . . . We watched him beat the water, reddened by his blood, with his little flippers, and then he was nothing but a poor lifeless thing cradled by the swell. . . .

There was a quickly suppressed murmur of anger, for the lucky hunter, who had just bagged such a fine specimen, was a midshipman.

I wanted to avoid a scene, and so I waited until I was alone with my mate to tell him what I thought of him, and an explication followed which nearly ended in a fist fight.

October, 1871.

Some important, but very little known, channels start from the Straits of Magellan, and after going north, between the eastern coast of Patagonia and several unexplored islands, emerge in the Gulf of Peñas, about 6° of latitude below their point of departure. We were kept a month in these seas in order to explore them.

For a hundred and fifty miles we passed huge deserted countries; an uninterrupted forest stretched along the two shores, a forest in which surely nothing had changed since the beginning of the world.

The first channels into which our ship plunged were narrow and difficult; there were winding passages, squeezed between high mountains, so close that sometimes the masts, brushing against the branches of the ancient tree, shook down the snow upon our heads in passing.

But the horizon gradually widened, and with the silence of death we saw new chains of lakes and mountains, glaciers and high waterfalls, solitary and nameless streams of water, glide past us.

Nature seems to lose some of her bitter melancholy as one leaves Magellan and approaches

the temperate countries of the North; the green becomes less dark and less monotonous in colour and the woods begin to show patches of light. Under the arches of the old trees, all dripping with rain, the shadows are so thick in the deep valleys that it is almost night and down there one finds a great abundance of moss and unknown ferns of the most exquisite fineness.

Some small transitory birds begin to be heard in the branches and a beautiful green-crested kingfisher abounds in the rivers.

Water fowl also appear in great numbers; in passing we disturb numerous loons, wild ducks and geese with gorgeous plumage; all animals that taste very bad but which we are very glad to see, nevertheless. Gigantic mussels, which furnish food for the natives, also do us a great service; their shells all contain pearls, tinted pink or blue, which doubtless no one has as yet thought of using for ornament.

Landings and expeditions are very difficult things down here; one can never proceed, in these countries, without hanging on to the branches and one tires quickly of these sombre walks, of the silence and complete isolation.

The sailors spend their days in the woods, cutting trees, for lack of coal, in order to maintain the fires of the engine. They come back in the evenings, in the darkness of winter, wet and frozen through, satisfied, nevertheless, if they

can bring back some penguins or some shell fish for their dinner.

Every once in a while we find some natives, generally an unpleasant meeting and one which leads nowhere. The sailors have a kind of superstitious fear mixed with disgust of these men, and amuse themselves with them very cautiously, as though they were curious but destructive animals. As a matter of fact, it would be very unpleasant to fall into their yellow hands without weapons; although their customs are not yet well known, I believe that one would promptly be cut to pieces and eaten, with a great noise and shouting. Fortunately the smoke of their wood fires betrays them at a great distance and one is not afraid of an unexpected encounter.

Their camps, which are littered with piles of shells, bones, and much filth, give off an offensive odour, and everything about them is disgusting and repulsive. They show no sign of industry nor of any kind of organization; more often they live in families like orang-outangs, feed themselves by hunting and fishing, and pass a large part of their lives on the water.

Their canoes generally hold four or five persons, an equal number of dogs, and a fire which burns carelessly, among some ashes, on the bottom of the craft.

Up at Queen Adelaide Island, we were disturbed one day by a canoe thus equipped, which

was approaching us making signs of distress. The people, as well as the dogs, were madly howling, showing us huge gaping mouths and faces of another world; with a complete obliviousness of the danger, they threw themselves upon our ship at the risk of being knocked to pieces.

We thought them mad or possessed; they were simply starving, and in an instant the sailors filled their canoe with crackers and bread, which they devoured.

Several times after that our ship gave charity to the Fuegians, who often became sufficiently courageous to come on board to beg for food. There was once a great panic among them. One day a large group of them was on the deck, voraciously eating the remnants of the crew's soup, quite ignorant of the fact that the diver had descended to examine the keel of the frigate. When they saw the huge round head of this unknown monster emerge from the water, their terror was indescribable; in a second they had flung themselves overboard, leaving their canoes and dogs, and we watched them regain the shore with rapid strokes.

People like these fit perfectly into their curiously wild environment, and when one is with them one can well believe himself transported back to the far-distant days of prehistoric man. Other kinds of men would be far less effective and

appropriate under these black skies and in these primitive forests.

October, 1871.

The first beautiful October days—the April of austral spring—give to these surroundings a much less sombre charm.

Gorgeous scenery is mirrored in the calm water. All the birds of the southern seas, the big albatross and the petrels, follow the ship on its quiet course in flocks and circle madly about her.

Our last port was Eden Harbour, an exquisite bay which lies before the Gulf of Peñas—and then, our mission being over, we steamed out to sea toward Peru.*

PIERRE LOTI.

* Here, in the diary, is the story of a putting into port at Easter Island which has already been published in "*Reflets sur la sombre route*," and then follows the whole manuscript of "*Le Mariage de Loti*."

A REPLY TO A YOUNG GENTLEMAN ABOUT
TO TRAVEL *

MY DEAR SIR:

Your letter, courteously requesting a certain amount of counsel and information concerning your projected journey to Europe, has reached me as I am returning from a journey myself, and I am sensible of the honour and responsibility involved in any attempt on my part to direct your wanderings.

The problem, as I deduce it from your letter, is this. You are a newspaper man in a large city in the Middle West. You are about thirty years old and you have given no hostages to fortune. You have saved a reasonable number of dollars, and your managing editor, who seems to be rather a shrewd as well as human sort of man, has given you six months' leave of absence. You have never been to Europe, and your reading has led you to believe that Europe has something for you which cannot be obtained in your home city. So you ask me, as one who has knocked about somewhat in those foreign parts, how you can

* From "Swallowing The Anchor" by permission of the author.

make your money last long enough, and how to go about your voyage of discovery along the legendary shores of the Ancient Sea.

It is quite unnecessary for me to waste words commending such a resolution to one who has already made it, but it will do no harm to record the gratification it has engendered, to be invited to participate in the adventure by planning the itinerary. And it will be impossible, I am afraid, to avoid a certain degree of envy creeping in, when I consider how you are about to have that thrill, never again to be recaptured, attending the first glimpse of the Mediterranean littoral.

The importance of such a journey is not to be over-estimated for those who have any connection whatsoever with literature and the arts. Some may object that newspaper work is neither one nor the other. On the contrary, in my opinion, newspaper work can be a very fine art indeed; and the celerity of execution, coupled with the variety of information involved in appraising the value of events, makes it advisable to seek inspiration from the origins of our national culture. And it is a shrewd criticism of the basic value of money, that the cheaper you do it the better it will avail you in the future.

The reason for this last-mentioned paradox is that travel is expensive only in so far as it renders you immune from the difficulties and peculiar-

ities of foreign places. It is expensive because it carries you in the environment to which you are accustomed. And so, if you are prepared to forego all those trivial accessories of modern life, all the comforts and conveniences which threaten to abolish the local characteristics of our modern world, you need not pay very much for your passage.

Assuming, then, that you are ready to cross the Atlantic upon some humble vessel, it will not cost you very much. Once in London or Liverpool, you will find steamers sailing weekly on cruises that include nearly every port in the Mediterranean. They are what we call cargo-liners and under British regulations they are provided with accommodation for not more than a dozen passengers. Under this rule they are not obliged to incur heavy expenses for extravagant and luxurious travel, and their charges are suited to modest resources.

Such a voyage, including Lisbon, Gibraltar, Marseilles, Genoa, Naples, Venice, Athens, and the ports of the Levant, would take no more than a couple of months, which, allowing for your journey to and from the Middle West, would leave you three months' leeway. Moreover, it would not be possible, since you arrive, say, at Spezia in the morning and leave for Civita Vecchia the next day, to acquire those romantic impressions which are the meat and nourishment

of travel, and which afford you those complex and delightful memories in the coming years.

And so, bearing all these considerations in mind, I am moved to suggest that you might be wise if you shipped as we say, as one of the crew. I confess I gave this problem much thought before I decided to propose such a course, because some men find it difficult to shed the white collar and accept the limitations imposed by a ship's articles. Yet, from my own experience I derive the conviction that nothing but profit comes of such a course. You move at one step into a different world. You are an integral part of the ship's company and of the voyage, instead of a mere accidental encumbrance.

Let us suppose, then, that, having reached Liverpool and having compressed your belongings into a sea bag instead of a wardrobe trunk, you seek employment and commence what to you, as a newspaper man, will be a liberal education.

As regards what you are to do, I offer no hard-and-fast directions. The higher offices on a ship, of course, are not for the occasional wanderer, not merely because years are required for the certificated qualifications, but because the responsibilities of such posts preclude that easy shedding of cares, when you go ashore, which enables you to savour to the full the essential spirit of vagabondage.

Because being a vagabond, or as nearly a vaga-

bond as you can manage, is the secret key to what you seem to seek. In that capacity you abandon those heavy social obligations that prevent so many first-class passengers ever seeing a foreign land. You will not, when visiting Cairo, for example, confine yourself to the terrace and dance hall of Shepheard's Hotel, and so you may see Cairo. At Naples you are free to go your own road in the evening along the front and behold in all its piquant innocence the life of the seaport.

Returning from this pleasant digression, let me repeat that, for your purpose, being a wiper or an ordinary seaman, so long as it conflicts with no insuperable dignity in your character, will be as serviceable as being a brassbound officer. Nowadays, the hardships of seagoing in the forecabin are largely mythical. Compared, I mean, with those of a former day. Reading a recent issue of a professional seaman's magazine, I noticed an article describing, with considerable bitterness, a new Scandinavian vessel with elevators to the engine room and hot and cold water faucets in the crew's quarters. I have no doubt batik curtains and fine old hook rugs and rosewood gramophones were also included. The tone of the article in question was that American ships should have the same conveniences, the inference being that American ships are poor affairs. This is a mistake. Any vessel built in the last ten years is

comfortable enough for anybody. I have served on a ship for a three-hundred-and-twenty-day voyage, with one stretch of ninety days at sea and another of seventy-three days from port to port, and nearly all of that time we lived, crew and cabin, on salt meat and preserved potatoes, on peas and beans and biscuit with dried apples and an occasional orgy of fresh fruit that made us sick.

So, with regard to your rating, so long as you are sound in wind and limb and are willing, which is the most important quality of all at sea, it does not matter very much for a few short months what position you hold on the articles. I can remember a young man, who confided to us one evening in the mess room that he came of good family and had been to college. He signed on as mess-room steward, but we discovered he had no talent for that arduous and complex calling, so he was transferred to the saloon as cabin boy. This proved even more disastrous, and we got him back again, this time as a coal-passer. The ship crossed the Equator on the long Indian Ocean slant from Cape Town to Singapore, and that young man had a stiff job in the bunkers. Yet he managed, in spite of his fine education, and by the time we reached Port Said on the homeward run, he was a fireman standing his watch with the best of them. It was a memorable experience to see him go into the dark, dirty

forecastle, black to the eyes and shining with sweat, and come out a couple of hours later in a natty suit with a stripe, an extremely high collar, straw hat and cane, to go ashore in Malta, where he had a brother who was a doctor. And this reminiscence reminds me that Richard Mathews Hallet, who is a good example to offer a newspaper man, once told me, as we voyaged down to Cuba one day a few years ago, that he could get a job as fireman or able seaman anywhere, having worked his way across the world in liners and sailing ships more than once.

I am the more encouraged to suggest something of this nature to you since I suspect, though you make no definite confession of it, that you would not be averse to accumulating some experiences with what is called "copy" value, which you could turn to account later on. If this reading between the lines of your letter is correct, the less you travel as a passenger the better. The tendency of passenger traffic, as I have already implied, is to maintain you as nearly as possible within the walls of conventional comfort and luxury. That is what most people desire and pay for, and the liners know their business perfectly, and supply what is demanded. What you want is something quite different, which you can find on the same ship but in another part of it.

You may ask here, however, when you have

arrived at some port in the Mediterranean that has taken your fancy, and you would like to wander afoot awhile, how are you going to achieve the liberty you crave?

That is a problem to be solved as circumstances shall direct. If you have accepted my delicate suggestion that the vagabond has access to unconventional and unstandardized resources of æsthetic enjoyment, you will have no difficulty in effecting a release whenever it suits your plans. The procedure may be left to the spur of the moment. You may rest assured that you will be only one member of a secret and joyous band of bohemians who haunt for a transient season the forecastles of British ships and who vanish like morning dew when the irresistible urge seizes their souls. They are even more adventurous and idyllic than you, since they have no comforting letter of credit awaiting them when they have reached their destined city.

I am reminded, in speaking of this, of an experience one May evening on the hills above Savona, where I sat with my dog looking out across the Gulf of Genoa. The sun was gone down in a great lake of red fire beyond San Remo, and in the blue dusk to the eastward the high *lanterna* of Genoa was sending out its slow-moving beam. Jack had explored a number of fascinating holes thereabouts on the brow of the cliffs, and was now reposing, tongue out,

waiting for the pleasant downhill jaunt into the town, where he would have a trencher of spaghetti, of which he was phenomenally fond, though he was a very English bull terrier and scornful of foreign ways. And then suddenly he growled and sat up. There was a sound of shuffling footsteps on the dusty road behind us, and a clear thin trickle of music from a pipe. As the dog barked, the sounds stopped. I looked over my shoulder with some interest. A gentleman, very dusty and way-worn indeed, was standing there, regarding us bashfully yet acutely as he wiped a tin whistle on the leg of his deplorable trousers.

"Sit down, Jack," I remarked, severely, and hooked on the chain. Jack was, as I have said, English. It was his theory that shabby trousers should be at once attacked, halfway up the calf.

"Is his name Jack?" remarked the dim object in the twilight advancing over the turf. "Correct me if I'm makin' a mistake, but I reckon you're English yerself."

"You are too, I take it?" I said, rather curiously.

"That's right," he returned, sitting down, not too close, but at a friendly distance. "That's what you might call me. Not that the blinkin' consuls are ever very glad to see me." And he laughed without malice, holding his whistle with his fingers on the stops. He was a very disreputable-

looking person, about forty, I should say, and it was quite time he had a shave. There was a queer elfin glint in his blue-grey eyes beneath the shaggy yellow brows and matted hair, that made me want to know what he was doing. So I asked him, and after he had coughed a good deal and regarded Jack's disdainful expression with humorous comprehension, he told me.

And the gist of it was that, quite apart from a game lung, as he called it, he had to be on the move. Now and again, as he talked, his elbows on his knees, he played a bar or perhaps a whole air, on his whistle. Very sweet in the still of the evening, with the lazy waves climbing over the black rocks below, and gurgling back again in white foam. Yes, he came down hereabouts every winter. "I travel for me 'ealth," he explained, with a sidelong elfin smile. "The doctor up in 'Artlepool, 'e ses, 'You ought to 'ave a warmer climet,' 'e ses. Doctor's orders, you see. So I gets a ship in the Tyne an' down I comes. The Second, 'e 'as no use for me. Seconds never do 'ave, I may say, 'tween you an' me an' the captain's wife. Seconds are funny blokes, I can tell you."

"Yes," I admit, pensively. "I know they are. I've been one for three years."

"You!" He put his tin whistle on the grass and regarded me with naked wonder. "Well, Gawd blimey! 'Ow was I to know?" he com-

plained. He took up his pipe and began to play a jiggety tune that made Jack put his nose in the air, as though he were preparing for a sentimental howl.

"Ah!" said our friend, pulling at the broken sole of his boot, "these 'ere Eyetalian roads take it out of your understandin'." Which gave me a chance to ask how far he'd come. And he said he had "hoofed it" from Venice, through Padua and Cremona, which he remarked was named after the violins, and then across the river at Parma and up the valleys of the Apennines. "Not like the old country," he said, suddenly, with the astounding and indestructible English pride, "but less chance o' catchin' a chill for a bloke like me." He coughed. And he began an attempt to explain what I already knew, and he was not very successful. He was distressed at having stumbled on one of those worried and anxious beings whose job it was to chase him up and down bunkers and make him keep the coal pockets full. I could see him, in my mind's eye, sitting in the darkness, with his slush-lamp beside him sending out a murky flame, and him coughing and thinking of the far blue hills of Italy and the long white ribbon of road. And then the Second's head and shoulders blocking the 'tween-decks scuttle, and the Second's truculent bawling voice coming along the alleyway through the coal.

"So I just took French leave," he mumbled. "Surly blighter! 'E never even sung a song as 'e was goin' along the shaft tunnel."

This was shrewd. I could see that Second! I watched the stranger as he began a mournful melody that made Jack turn round and round nervously and then lie down suddenly with his nose on his paws. It was nearly dark, and that shabby elfin man was only a shadow with a silver tube in his teeth, evoking unexpected spirits from the air.

And when I asked him if he wasn't in danger of being caught, he was very cheerful about it, because he said he had a conscience and never took his half-pay note. "They makes on it," he confided. "They gets a week or more out o' me fer nothin'. And they can always get some poor blighter who's out o' 'ospittle and wants to get 'ome. They gets me soon," he meditated. "Summer's comin' in England. I'll be lookin' for a ship soon."

"Here, in Savona?" I asked. I was a man short already.

"No, not 'ere," he replied, evasively. "I'm goin' along the Riveera, you see. P'raps as far as Marseilles. That's named after the *Marseillaise*, I reckon." And he began to play it on his tin whistle, watching Jack out of the corner of his eye, and moving his elbow to call my attention to the dog's behaviour.

"Once," he said, stopping suddenly, "I winters in Egypt!" and he came a little nearer for conversation. "Alexandria! I got pinched there. Big black bobby arrests me. Well, charge me, I ses, charge me. You can't lock me up unless you charge me. Oh, couldn't 'e? The beak gives me a good talkin' to. Lazy beggar, I am. Well, I ses, I ain't done nothin'. No, but you will, he ses. Well, I ask you, is that justice? Then 'e tells 'em to take me to the consul, and 'e gives me a job on a ship. So I goes on her to Port Said, and I clears out there. But them Gippies don't give nothin' fer music. They's never 'eard of 'Aïda.'"

"Have you?" I asked, startled, and he began to whistle an air of Radames.

"Well," I said, "I must be going. I've got to get up in the morning, you know."

"I do know," he retorted. "I wouldn't 'ave a job like yours, Mister, for a farm. Could you let us 'ave 'alf a dollar without missin' it? You blokes get good money now," he added, whimsically. "You're a toff, Mister, one of the old breed. Give my love to dear old England."

Darkness came down over the sea as Jack and I descended the hill road into Savona. The café lights were cheerful along the streets, and we were sharp-set for food and drink. And while we tarried there, and I smoked a pipe over the last of the Chianti, I saw him again, across the street. He was playing a jiggety tune in front of

the little tables, his old tweed cap aslant on his undisciplined head, his legs bowed a little as he swayed to the rhythm, a veritable reincarnation of a mediæval troubadour.

WILLIAM MCFEE.

DOUBLING CAPE HORN

IN our first attempt to double the Cape, when we came up to the latitude of it, we were nearly seventeen hundred miles to the westward, but in running for the Straits of Magellan we stood so far to the eastward that we made our second attempt at a distance of not more than four or five hundred miles; and we had great hopes, by this means, to run clear of the ice; thinking that the easterly gales, which had prevailed for a long time, would have driven it to the westward. With the wind about two points free, the yards braced in a little, and two close-reefed topsails and a reefed foresail on the ship, we made great way toward the southward; and almost every watch, when we came on deck, the air seemed to grow colder, and the sea to run higher. Still we saw no ice, and had great hopes of going clear of it altogether, when, one afternoon, about three o'clock, while we were taking a *siesta* during our watch below, "All hands!" was called in a loud and fearful voice. "Tumble up here, men! tumble up; don't stop for your clothes—before we're upon it!" We sprang out of our berths and hurried upon deck. The loud

sharp voice of the captain was heard giving orders, as though for life or death, and we ran aft to the braces, not waiting to look ahead, for not a moment was to be lost. The helm was hard up, the after yards shaking, and the ship in the act of wearing. Slowly, with the stiff ropes and iced rigging, we swung the yards round, everything coming hard and with a creaking and rending sound, like pulling up a plank which has been frozen into the ice. The ship wore round fairly, the yards were steadied, and we stood off on the other tack, leaving behind us, directly under our larboard quarter, a large ice island, peering out of the mist, and reaching high above our tops; while astern, and on either side of the island, large tracts of field-ice were dimly seen, heaving and rolling in the sea. We were now safe, and standing to the northward; but, in a few minutes more, had it not been for the sharp lookout of the watch, we should have been fairly upon the ice, and left our ship's old bones adrift in the Southern Ocean. After standing to the northward a few hours, we wore ship, and the wind having hauled, we stood to the southward and eastward. All night long a bright lookout was kept from every part of the deck; and whenever ice was seen on the one bow or the other the helm was shifted and the yards braced, and, by quick working of the ship, she was kept clear. The accustomed cry of "Ice ahead!" "Ice on the

lee bow!" "Another island!" in the same tones, and with the same orders following them, seemed to bring us directly back to our old position of the week before. During our watch on deck, which was from twelve to four, the wind came out ahead, with a pelting storm of hail and sleet, and we lay hove-to, under a close-reefed foretop-sail, the whole watch. During the next watch it fell calm with a drenching rain until daybreak, when the wind came out to the westward, and the weather cleared up, and showed us the whole ocean, in the course which we should have steered, had it not been for the head wind and calm, completely blocked up with ice. Here, then, our progress was stopped, and we wore ship, and once more stood to the northward and eastward; not for the Straits of Magellan, but to make another attempt to double the Cape, still farther to the eastward; for the captain was determined to get round if perseverance could do it, and the third time, he said, never failed.

With a fair wind we soon ran clear of the field-ice, and by noon had only the stray islands floating far and near upon the ocean. The sun was out bright, the sea of a deep blue, fringed with the white foam of the waves, which ran high before a strong south-wester; our solitary ship tore on through the open water as though glad to be out of her confinement; and the ice islands lay scattered here and there, of various

sizes and shapes, reflecting the bright rays of the sun, and drifting slowly northward before the gale. It was a contrast to much that we had lately seen, and a spectacle not only of beauty, but of life; for it required but little fancy to imagine these islands to be animate masses which had broken loose from the "thrilling regions of thick-ribbed ice," and were working their way, by wind and current, some alone, and some in fleets, to milder climes. No pencil has ever yet given anything like the true effect of an iceberg. In a picture, they are huge, uncouth masses, stuck in the sea, while their chief beauty and grandeur—their slow, stately motion, the whirling of the snow about their summits, and the fearful groaning and cracking of their parts—the picture cannot give. This is the large iceberg, while the small and distant islands, floating on the smooth sea, in the light of a clear day, look like little floating fairy isles of sapphire.

From a north-east course we gradually hauled to the eastward, and after sailing about two hundred miles, which brought us as near to the western coast of Tierra del Fuego as was safe, and having lost sight of the ice altogether, for the third time we put the ship's head to the southward, to try the passage of the Cape. The weather continued clear and cold, with a strong gale from the westward, and we were fast getting up with the latitude of the Cape, with a

prospect of soon being round. One fine afternoon, a man, who had gone into the foretop to shift the rolling tackles, sung out at the top of his voice, and with evident glee, "Sail ho!" Neither land nor sail had we seen since leaving San Diego; and only those who have traversed the length of a whole ocean alone can imagine what an excitement such an announcement produced on board. "Sail ho!" shouted the cook, jumping out of his galley; "Sail ho!" shouted a man, throwing back the slide of the scuttle, to the watch below, who were soon out of their berths and on deck; and "Sail ho!" shouted the captain down the companion-way to the passenger in the cabin.

Besides the pleasure of seeing a ship and human beings in so desolate a place, it was important for us to speak a vessel, to learn whether there was ice to the eastward, and to ascertain the longitude; for we had no chronometer, and had been drifting about so long that we had nearly lost our reckoning; and opportunities for lunar observations are not frequent or sure in such a place as Cape Horn. For these various reasons the excitement in our little community was running high, and conjectures were made, and everything thought of for which the captain would hail, when the man aloft sung out—"Another sail, large on the weather bow!" This was a little odd, but so much the better, and did not

shake our faith in their being sails. At length the man in the top hailed, and said he believed it was land, after all. "Land in your eye!" said the mate, who was looking through the telescope; "they are ice islands, if I can see a hole through a ladder"; and a few moments showed the mate to be right; and all our expectations fled; and instead of what we most wished to see we had what we most dreaded, and what we hoped we had seen the last of. We soon, however, left these astern, having passed within about two miles of them, and at sundown the horizon was clear in all directions.

Having a fine wind, we were soon up with and passed the latitude of the Cape, and, having stood far enough to the southward to give it a wide berth, we began to stand to the eastward, with a good prospect of being round and steering to the northward, on the other side, in a few days. But ill luck seemed to have lighted upon us. Not four hours had we been standing on in this course before it fell dead calm, and in half an hour it clouded up, a few straggling blasts, with spits of snow and sleet, came from the eastward, and in an hour more we lay hove-to under a close-reefed maintopsail, drifting bodily off to leeward before the fiercest storm that we had yet felt, blowing dead ahead, from the eastward. It seemed as though the genius of the place had been roused at finding that we had nearly slipped

through his fingers, and had come down upon us with tenfold fury. The sailors said that every blast, as it shook the shrouds, and whistled through the rigging, said to the old ship, "No, you don't!" "No, you don't!"

For eight days we lay drifting about in this manner. Sometimes—generally toward noon—it fell calm; once or twice a round copper ball showed itself for a few moments in the place where the sun ought to have been, and a puff or two came from the westward, giving some hope that a fair wind had come at last. During the first two days we made sail for these puffs, shaking the reefs out of the topsails and boarding the tacks of the courses; but finding that it only made work for us when the gale set in again, it was soon given up, and we lay-to under our close-reefs. We had less snow and hail than when we were farther to the westward, but we had an abundance of what is worse to a sailor in cold weather,—drenching rain. Snow is blinding, and very bad when coming upon a coast, but, for genuine discomfort, give me rain with freezing weather. A snowstorm is exciting, and it does not wet through the clothes (a fact important to a sailor); but a constant rain there is no escaping from. It wets to the skin, and makes all protection vain. We had long ago run through all our dry clothes, and as sailors have no other way of drying them than by the sun, we had

nothing to do but to put on those which were the least wet. At the end of each watch, when we came below, we took off our clothes and wrung them out; two taking hold of a pair of trousers, one at each end—and jackets in the same way. Stockings, mittens, and all, were wrung out also, and then hung up to drain and chafe dry against the bulkheads. Then, feeling all our clothes, we picked out those which were the least wet, and put them on, so as to be ready for a call, and turned-in, covered ourselves up with blankets, and slept until three knocks on the scuttle and the dismal sound of "All Starbow-lines ahoy! Eight bells, there below! Do you hear the news?" drawled out from on deck, and the sulky answer of "Aye, aye!" from below, sent us up again.

On deck all was dark, and either a dead calm, with the rain pouring steadily down, or, more generally, a violent gale dead ahead, with rain pelting horizontally, and occasional variations of hail and sleet; decks afloat with water swashing from side to side, and constantly wet feet, for boots could not be wrung out like drawers, and no composition could stand the constant soaking. In fact, wet and cold feet are inevitable in such weather, and are not the least of those items which go to make up the grand total of the discomforts of a winter passage round Cape Horn. Few words were spoken between the watches as

they shifted; the wheel was relieved, the mate took his place on the quarter-deck, and lookouts in the bows; and each man had his narrow space to walk fore and aft in, or rather to swing himself forward and back in, from one belaying-pin to another, for the decks were too slippery with ice and water to allow of much walking. To make a walk, which is absolutely necessary to pass away the time, one of us hit upon the expedient of sanding the decks; and afterward, whenever the rain was not so violent as to wash it off, the weather-side of the quarter-deck and a part of the waist and forecastle were sprinkled with the sand which we had on board for holystoning, and thus we made a good promenade, where we walked fore and aft, two and two, hour after hour, in our long, dull, and comfortless watches. The bells seemed to be an hour or two apart, instead of half an hour, and an age to elapse before the welcome sound of eight bells. The sole object was to make the time pass on. Any change was sought for which would break the monotony of the time; and even the two hours' trick at the wheel, which came round to us in turn, once in every other watch, was looked upon as a relief. The never-failing resource of long yarns, which eke out many a watch, seemed to have failed us now; for we had been so long together that we had heard each other's stories told over and over again till we had them by heart; each

one knew the whole history of each of the others, and we were fairly and literally talked out. Singing and joking we were in no humour for; and, in fact, any sound of mirth or laughter would have struck strangely upon our ears, and would not have been tolerated any more than whistling or a wind^e instrument. The last resort, that of speculating upon the future, seemed now to fail us, for our discouraging situation, and the danger we were really in (as we expected every day to find ourselves drifting back among the ice), "clapped a stopper" upon all that. From saying "*when* we get home," we began insensibly to alter it to "*if* we get home," and at last the subject was dropped by a tacit consent.

In this state of things, a new light was struck out, and a new field opened, by a change in the watch. One of our watch was laid up for two or three days by a bad hand (for in cold weather the least cut or bruise ripens into a sore), and his place was supplied by the carpenter. This was a windfall, and there was a contest who should have the carpenter to walk with him. As "Chips" was a man of some little education, and he and I had had a good deal of intercourse with each other, he fell in with me in my walk. He was a Fin, but spoke English well, and gave me long accounts of his country—the customs, the trade, the towns, what little he knew of the government (I found he was no friend of Russia), his voyages,

his first arrival in America, his marriage and courtship; he had married a countrywoman of his, a dressmaker, whom he met with in Boston. I had very little to tell him of my quiet, sedentary life at home; and in spite of our best efforts, which had protracted these yarns through five or six watches, we fairly talked each other out, and I turned him over to another man in the watch, and put myself upon my own resources.

I commenced a deliberate system of time-killing, which united some profit with a cheering up of the heavy hours. As soon as I came on deck, and took my place and regular walk, I began with repeating over to myself in regular order a string of matters which I had in my memory—the multiplication table and the tables of weights and measures; the Kanaka numerals; then the States of the Union, with their capitals; the counties of England, with their shire towns; and the kings of England in their order, and other things. This carried me through my facts, and, being repeated deliberately, with long intervals, often eked out the first two bells. Then came the Ten Commandments, the thirty-ninth chapter of Job, and a few other passages from Scripture. The next in order, which I seldom varied from, came Cowper's "Castaway," which was a great favourite with me; its solemn measure and gloomy character, as well as the incident it was founded upon, making it well suited to a lonely watch at sea.

Then his lines to Mary, his address to the Jackdaw, and a short extract from "Table Talk" (I abounded in Cowper, for I happened to have a volume of his poems in my chest); "Ille et nefasto" from Horace, and Goethe's "Erl König." After I had got through these, I allowed myself a more general range among everything that I could remember, both in prose and verse. In this way, with an occasional break by relieving the wheel, heaving the log, and going to the scuttle-butt for a drink of water, the longest watch was passed away; and I was so regular in my silent recitations that, if there was no interruption by ship's duty, I could tell very nearly the number of bells by my progress.

Our watches below were no more varied than the watch on deck. All washing, sewing, and reading were given up, and we did nothing but eat, sleep, and stand our watch, leading what might be called a Cape Horn life. The fore-castle was too uncomfortable to sit up in; and whenever we were below we were in our berths. To prevent the rain and the sea-water which broke over the bows from washing down, we were obliged to keep the scuttle closed, so that the fore-castle was nearly air-tight. In this little, wet, leaky hole we were all quartered, in an atmosphere so bad that our lamp, which swung in the middle from the beams, sometimes actually burned blue, with a large circle of foul air about it. Still, I

was never in better health than after three weeks of this life. I gained a great deal of flesh, and we all ate like horses. At every watch when we came below, before turning in, the bread barge and beef kid were overhauled. Each man drank his quart of hot tea night and morning, and glad enough we were to get it; for no nectar and ambrosia were sweeter to the lazy immortals than was a pot of hot tea, a hard biscuit, and a slice of cold salt beef to us after a watch on deck. To be sure, we were mere animals, and had this life lasted a year instead of a month, we should have been little better than the ropes in the ship. Not a razor, nor a brush, nor a drop of water, except the rain and the spray, had come near us all the time; for we were on an allowance of fresh water; and who would strip and wash himself in salt water on deck, in the snow and ice, with the thermometer at zero?

After about eight days of constant easterly gales, the wind hauled occasionally a little to the southward, and blew hard, which as we were well to the southward, allowed us to brace in a little, and stand on under all the sail we could carry. These turns lasted but a short while, and sooner or later it set in again from the old quarter; yet at each time we made something, and were gradually edging along to the eastward. One night, after one of these shifts of the wind, and when all hands had been up a great part of

the time, our watch was left on deck, with the mainsail hanging in the buntlines, ready to be set if necessary. It came on to blow worse and worse, with hail and snow beating like so many furies upon the ship, it being as dark and thick as night could make it. The mainsail was blowing and slatting with a noise like thunder, when the captain came on deck and ordered it to be furled. The mate was about to call all hands, when the captain stopped him, and said that the men would be beaten out if they were called up so often; that, as our watch must stay on deck, it might as well be doing that as anything else. Accordingly, we went upon the yard; and never shall I forget that piece of work. Our watch had been so reduced by sickness, and by some having been left in California, that, with one man at the wheel, we had only the third mate and three besides myself to go aloft; so that at most we could only attempt to furl one yard-arm at a time. We manned the weather yard-arm, and set to work to make a furl of it. Our lower masts being short, and our yards very square, the sail had a head of nearly fifty feet, and a short leech, made still shorter by the deep reef which was in it, which brought the clew away out on the quarters of the yard, and made a bunt nearly as square as the mizzen royal yard. Besides this difficulty, the yard over which we lay was cased with ice, the gaskets and rope of the foot and leech of the

sail as stiff and hard as a piece of leather hose, and the sail itself about as pliable as though it had been made of sheets of sheathing copper. It blew a perfect hurricane, with alternate blasts of snow, hail, and rain. We had to *fist* the sail with bare hands. No one could trust himself to mittens, for if he slipped he was a gone man. All the boats were hoisted in on deck, and there was nothing to be lowered for him. We had need of every finger God had given us. Several times we got the sail upon the yard, but it blew away again before we could secure it. It required men to lie over the yard to pass each turn of the gaskets, and when they were passed it was almost impossible to knot them so that they would hold. Frequently we were obliged to leave off altogether and take to beating our hands upon the sail to keep them from freezing. After some time—which seemed for ever—we got the weather side stowed after a fashion, and went over to leeward for another trial. This was still worse, for the body of the sail had been blown over to leeward, and, as the yard was a-cock-bill by the lying over of the vessel, we had to light it all up to windward. When the yard-arms were furled, the bunt was all adrift again, which made more work for us. We got all secure at last, but we had been nearly an hour and a half upon the yard, and it seemed an age. It had just struck five bells when we went up, and eight were struck

soon after we came down. This may seem slow work; but considering the state of everything, and that we had only five men to a sail with just half as many square yards of canvas in it as the main-sail of the *Independence* sixty-gun ship, which musters seven hundred men at her quarters, it is not wonderful that we were no quicker about it. We were glad enough to get on deck, and still more to go below. The oldest sailor in the watch said, as he went down, "I shall never forget the mainyard; it beats all my going a-fishing. Fun is fun, but furling one yard-arm of a course at a time, off Cape Horn, is no better than man-killing."

During the greater part of the next two days the wind was pretty steady from the southward. We had evidently made great progress, and had good hope of being soon up with the Cape, if we were not there already. We could put but little confidence in our reckoning, as there had been no opportunities for an observation, and we had drifted too much to allow of our dead reckoning being anywhere near the mark. If it would clear off enough to give a chance for an observation, or if we could make land, we should know where we were; and upon these, and the chances of falling in with a sail from the eastward, we depended almost entirely.

Friday, July 22nd. This day we had a steady gale from the southward, and stood on under

close sail, with the yards eased a little by the weather braces, the clouds lifting a little, and showing signs of breaking away. In the afternoon, I was below with Mr. Hatch, the third mate, and two others, filling the bread locker in the steerage from the casks, when a bright gleam of sunshine broke out and shone down the companion-way and through the skylight, lighting up everything below, and sending a warm glow through the hearts of all. It was a sight we had not seen for weeks—an omen, a godsend. Even the roughest and hardest face acknowledged its influence. Just at that moment we heard a loud shout from all parts of the deck, and the mate called out down the companion-way to the captain, who was sitting in the cabin. What he said we could not distinguish, but the captain kicked over his chair, and was on deck at one jump. We could not tell what it was; and, anxious as we were to know, the discipline of the ship would not allow of our leaving our places. Yet, as we were not called, we knew there was no danger. We hurried to get through with our job, when seeing the steward's black face peering out of the pantry, Mr. Hatch hailed him to know what was the matter. "Lan'o, to be sure, sir! No you hear 'em sing out, 'Lan'o?' De cap'em say 'im Cape Horn!"

This gave us a new start, and we were soon through our work and on deck; and there lay

he land, fair upon the larboard beam, and slowly edging away from the quarter. All hands were busy looking at it—the captain and mates from the quarter-deck, the cook from his galley, and the sailors from the forecastle; and even Mr. Nuttall, the passenger, who had kept in his shell for nearly a month, and hardly been seen by anybody, and whom we had almost forgotten was on board, came out like a butterfly, and was hopping round as bright as a bird.

The land was the island of Staten Land, just to the eastward of Cape Horn; and a more desolate-looking spot I never wish to set eyes upon—bare, broken, and girt with rocks and ice, with here and there, between the rocks and broken hillocks, a little stunted vegetation of shrubs. It was a place well suited to stand at the junction of the two oceans, beyond the reach of human cultivation, and encounter the blasts and snows of a perpetual winter. Yet, dismal as it was, it was a pleasant sight to us; not only as being the first land we had seen, but because it told us that we had passed the Cape—were in the Atlantic—and that, with twenty-four hours of this breeze, we might bid defiance to the Southern Ocean. It told us, too, our latitude and longitude better than any observation; and the captain now knew where we were, as well as if we were off the end of Long Wharf.

In the general joy, Mr. Nuttall said he should

like to go ashore upon the island and examine a spot which probably no human being had ever set foot upon; but the captain intimated that he would see the island, specimens and all, in—another place, before he would get out a boat or delay the ship one moment for him.

We left the land gradually astern; and at sundown had the Atlantic Ocean clear before us.

RICHARD HENRY DANA.

DISCOVERING THE NIGER

WAWRA is a small town surrounded with high walls, and inhabited by a mixture of Mandingoes and Foulahs. The inhabitants employ themselves chiefly in cultivating corn, which they exchange with the Moors for salt. Here, being in security from the Moors, and very much fatigued, I resolved to rest myself, and meeting with a hearty welcome from the Dooty, whose name was Flancharee, I laid myself down upon a bullock's hide, and slept soundly for about two hours. The curiosity of the people would not allow me to sleep any longer. They had seen my saddle and bridle, and were assembled in great number to learn who I was, and whence I came. Some were of opinion that I was an Arab; others insisted that I was some Moorish Sultan; and they continued to debate the matter with such warmth, that the noise awoke me. The Dooty (who had formerly been at Gambia) at last interposed in my behalf, and assured them that I was certainly a white man; but he was convinced from my appearance that I was a very poor one.

In the course of the day, several women, hearing that I was going to Sego, came and begged me to inquire of Mansong, the king, what was become of their children. One woman in particular, told me that her son's name was Mamadee; that he was no heathen, but prayed to God morning and evening, and had been taken from her about three years ago, by Mansong's army: since which she had never heard of him. She said she often dreamed about him; and begged me, if I should see him, either in Bambarra, or in my own country, to tell him that his mother and sister were still alive. In the afternoon the Dooty examined the contents of the leather bag, in which I had packed up my clothes; but finding nothing that was worth taking, he returned it, and told me to depart in the morning.

July 6th.—It rained very much in the night, and at daylight I departed, in company with a Negro, who was going to a town called Dingyee for corn; but we had not proceeded above a mile, before the ass upon which he rode kicked him off, and he returned, leaving me to prosecute the journey by myself.

I reached Dingyee about noon; but the Dooty and most of the inhabitants had gone into the fields to cultivate corn. An old Foulah, observing me wandering about the town, desired me to come to his hut, where I was well entertained; and the Dooty, when he returned, sent me some

victuals for myself, and corn for my horse.

July 7th.—In the morning, when I was about to depart, my landlord, with a great deal of diffidence, begged me to give him a lock of my hair. He had been told, he said, that white men's hair made a saphie, that would give to the possessor all the knowledge of white men. I had never before heard of so simple a mode of education, but instantly complied with the request; and my landlord's thirst for learning was such, that, with cutting and pulling, he cropped one side of my head pretty closely; and would have done the same with the other, had I not signified my disapprobation by putting on my hat, and assuring him, that I wished to reserve some of this precious merchandise for a future occasion.

I reached a small town called Wassiboo, about twelve o'clock, where I was obliged to stop until an opportunity should offer for procuring a guide to Satilé, which is distant a very long day's journey, through woods without any beaten path. I accordingly took up my residence at the Dooty's house, where I staid four days; during which time I amused myself by going to the fields with the family to plant corn. Cultivation is carried on here on a very extensive scale; and, as the natives themselves express it, "hunger is never known." In cultivating the soil, the men and women work together. They use a large sharp hoe, much superior to that used in Gambia; but

they are obliged, for fear of the Moors, to carry their arms with them to the field. The master, with the handle of his spear, marks the field into regular plats, one of which is assigned to every three slaves.

On the evening of the 11th, eight of the fugitive Kaartans arrived at Wassiboo. They had found it impossible to live under the tyrannical government of the Moors, and were going to transfer their allegiance to the king of Bambarra. They offered to take me along with them as far as Satilé, and I accepted the offer.

July 12th.—At daybreak we set out, and travelled with uncommon expedition until sunset: we stopped only twice in the course of the day, once at a watering place in the woods, and another time at the ruins of a town, formerly belonging to Daisy, called *Illa-Compe* (the corn town). When we arrived in the neighbourhood of Satilé, the people who were employed in the corn fields, seeing so many horsemen, took us for a party of Moors, and ran screaming away from us. The whole town was instantly alarmed, and the slaves were seen in every direction driving the cattle and horses towards the town. It was in vain that one of our company galloped up to undeceive them: it only frightened them the more; and when we arrived at the town, we found the gates shut and the people all under arms. After a long parley we were permitted to enter;

and as there was every appearance of a heavy tornado, the Dooty allowed us to sleep in his baloon, and gave us each a bullock's hide for a bed.

July 13th.—Early in the morning we again set forward. The roads were wet and slippery; but the country was very beautiful, abounding with rivulets, which were increased by the rain into rapid streams. About ten o'clock we came to the ruins of a village, which had been destroyed by war about six months before; and in order to prevent any town from being built there in future, the large Bentang tree, under which the natives spent the day, had been burned down, the wells filled up, and everything that could make the spot desirable completely destroyed.

About noon my horse was so much fatigued that I could not keep up with my companions; I therefore dismounted, and desired them to ride on, telling them that I would follow as soon as my horse had rested a little. But I found them unwilling to leave me. The lions, they said, were very numerous in those parts, and though they might not so readily attack a body of people, they would soon find out an individual. It was therefore agreed that one of the company should stay with me to assist in driving my horse, while the others passed on to Galloo to procure lodgings, and collect grass for the horses before night. Accompanied by this worthy Negro, I drove my

horse before me, until about four o'clock, when we came in sight of Galloo, a considerable town, standing in a fertile and beautiful valley surrounded with high rocks.

As my companions had thoughts of settling in this neighbourhood, they had a fine sheep given them by the Dooty; and I was fortunate enough to procure plenty of corn for my horse. Here they blow upon elephants' teeth when they announce evening prayers, in the same manner as at Kem-moo.

Early next morning (July 14th), having first returned many thanks to our landlord for his hospitality, while my fellow-travellers offered up their prayers that he might never want, we set forward, and about three o'clock arrived at Moorja, a large town, famous for its trade in salt, which the Moors bring here in great quantities to exchange for corn and cotton cloth. As most of the people here are Mahomedans, it is not allowed to the Kafirs to drink beer, which they call *Neo-dollo* (corn spirit), except in certain houses. In one of these I saw about twenty people sitting round large vessels of this beer with the greatest conviviality, many of them in a state of intoxication. As corn is plentiful, the inhabitants are very liberal to strangers. I believe we had as much corn and milk sent us by different people as would have been sufficient for three times our number; and though we re-

mained here two days, we experienced no diminution of their hospitality.

On the morning of the 16th we again set forward, accompanied by a coffle of fourteen asses, loaded with salt, bound for Sansanding. The road was particularly romantic, between two rocky hills; but the Moors sometimes lie in wait here to plunder strangers. As soon as we had reached the open country, the master of the salt coffle thanked us for having staid with him so long, and now desired us to ride on. The sun was almost set before we reached Datliboo. In the evening we had a most tremendous tornado. The house in which we lodged being flat-roofed, admitted the rain in streams. The floor was soon ankle deep, the fire extinguished, and we were left to pass the night upon some bundles of firewood that happened to lie in a corner.

July 17th.—We departed from Datliboo, and about ten o'clock passed a large coffle returning from Sego, with corn hoes, mats, and other household utensils. At five o'clock we came to a large village, where we intended to pass the night, but the Dooty would not receive us. When we departed from this place, my horse was so much fatigued that I was under the necessity of driving him, and it was dark before we reached Fanimboo, a small village; the Dooty of which no sooner heard that I was a white man than he brought out three old muskets, and was much dis-

appointed when he was told that I could not repair them.

July 18th.—We continued our journey; but, owing to a light supper the preceding night, we felt ourselves rather hungry this morning, and endeavoured to procure some corn at a village, but without success. The towns were now more numerous, and the land that is not employed in cultivation affords excellent pasturage for large herds of cattle; but owing to the great concourse of people daily going to and returning from Sego, the inhabitants are less hospitable to strangers.

My horse becoming weaker and weaker every day, was now of very little service to me; I was obliged to drive him before me for the greater part of the day, and did not reach Geosorro until eight o'clock in the evening. I found my companions wrangling with the Dooty, who had absolutely refused to give or sell them any provisions; and as none of us had tasted victuals for the last twenty-four hours, we were by no means disposed to fast another day, if we could help it. But finding our entreaties without effect, and being very much fatigued, I fell asleep, from which I was awakened, about midnight, with the joyful information, "*kinnenata*" (the victuals is come). This made the remainder of the night pass away pleasantly; and at daybreak, July 19th, we resumed our journey, proposing to stop at a village called Doolinkeaboo, for the night fol-

lowing. My fellow-travellers, having better horses than myself, soon left me, and I was walking barefoot, driving my horse, when I was met by a cofile of slaves, about seventy in number, coming from Sego. They were tied together by their necks with thongs of a bullock's hide, twisted like a rope; seven slaves upon a thong, and a man with a musket between every seven. Many of the slaves were ill-conditioned, and a great number of them women. In the rear came Sidi Mahomed's servant, whom I remembered to have seen at the camp of Benowm; he presently knew me, and told me that these slaves were going to Morocco, by the way of Ludamar, and the Great Desert.

In the afternoon, as I approached Doolinkeaboo, I met about twenty Moors on horseback, the owners of the slaves I had seen in the morning; they were well armed with muskets, and were very inquisitive concerning me, but not so rude as their countrymen generally are. From them I learned that Sidi Mahomed was not at Sego, but had gone to Kancaba for gold dust.

When I arrived at Doolinkeaboo, I was informed that my fellow-travellers had gone on, but my horse was so much fatigued that I could not possibly proceed after them. The Dooty of the town, at my request, gave me a draught of water, which is generally looked upon as an earnest of greater hospitality; and I had no

doubt of making up for the toils of the day by a good supper and a sound sleep; unfortunately I had neither one nor the other. The night was rainy and tempestuous, and the Dooty limited his hospitality to the draught of water.

July 20th.—In the morning I endeavoured, both by entreaties and threats, to procure some victuals from the Dooty, but in vain. I even begged some corn from one of his female slaves, as she was washing it at the well, and had the mortification to be refused. However, when the Dooty was gone to the fields, his wife sent me a handful of meal, which I mixed with water, and drank for breakfast. About eight o'clock I departed from Doolinkeaboo, and at noon stopped a few minutes at a large korree, where I had some milk given me by the Foulahs. And hearing that two Negroes were going from thence to Sego, I was happy to have their company, and we set out immediately. About four o'clock we stopped at a small village, where one of the Negroes met with an acquaintance, who invited us to a sort of public entertainment, which was conducted with more than common propriety. A dish made of sour milk and meal, called *Sinkatoo*, and beer made from their corn, was distributed with great liberality, and the women were admitted into the society—a circumstance I had never before observed in Africa. There was no compulsion, every one was at liberty to drink as

he pleased; they nodded to each other when about to drink, and on setting down the calabash, commonly said *berka* (thank you). Both men and women appeared to be somewhat intoxicated, but they were far from being quarrelsome.

Departing from thence, we passed several large villages, where I was constantly taken for a Moor, and became the subject of much merriment to the Bambarrans; who seeing me drive my horse before me, laughed heartily at my appearance. He has been at Mecca, says one, you may see that by his clothes; another asked me if my horse was sick; a third wished to purchase it, etc.; so that I believe the very slaves were ashamed to be seen in my company. Just before it was dark, we took up our lodging for the night at a small village, where I procured some victuals for myself and some corn for my horse, at the moderate price of a button, and was told that I should see the Niger (which the Negroes called Joliba, or *the great water*) early the next day. The lions are here very numerous; the gates are shut a little after sunset, and nobody allowed to go out. The thoughts of seeing the Niger in the morning, and the troublesome buzzing of mosquitoes, prevented me from shutting my eyes during the night; and I had saddled my horse and was in readiness before daylight; but, on account of the wild beasts, we were obliged to

wait until the people were stirring, and the gates opened. This happened to be a market-day at Sego, and the roads were everywhere filled with people carrying different articles to sell. We passed four large villages, and at eight o'clock saw the smoke over Sego.

As we approached the town, I was fortunate enough to overtake the fugitive Kaartans, to whose kindness I had been so much indebted in my journey through Bambarra. They readily agreed to introduce me to the king; and we rode together through some marshy ground, where, as I was anxiously looking around for the river, one of them called out, *geo affili* (see the water), and looking forwards, I saw with infinite pleasure the great object of my mission—the long sought for majestic Niger, glittering to the morning sun, as broad as the Thames at Westminster, and flowing slowly *to the eastward*. I hastened to the brink, and, having drank of the water, lifted up my fervent thanks in prayer to the Great Ruler of all things, for having thus far crowned my endeavours with success.

The circumstance of the Niger's flowing towards the east, and its collateral points, did not, however, excite my surprise; for although I had left Europe in great hesitation on this subject, and rather believed that it ran in the contrary direction, I had made such frequent inquiries during my progress, concerning this river,

and received from Negroes, of different nations, such clear and decisive assurances that its general course was *towards the rising sun*, as scarce left any doubt on my mind; and more especially as I knew that Major Houghton had collected similar information in the same manner.

Sego, the capital of Bambarra, at which I had now arrived, consists, properly speaking, of four distinct towns; two on the northern bank of the Niger, called Sego Korro and Sego Boo; and two on the southern bank, called Sego Soo Korro and Sego See Korro. They are all surrounded with high mud walls; the houses are built of clay, of a square form, with flat roofs; some of them have two storeys, and many of them are white-washed. Besides these buildings, Moorish mosques are seen in every quarter; and the streets, though narrow, are broad enough for every useful purpose, in a country where wheel-carriages are entirely unknown. From the best inquiries I could make, I have reason to believe that Sego contains altogether about thirty thousand inhabitants. The king of Bambarra constantly resides at Sego See Korro; he employs a great many slaves in conveying people over the river, and the money they receive (though the fare is only ten cowrie shells for each individual) furnishes a considerable revenue to the king in the course of a year. The canoes are of a singular construction, each of them being formed of the trunks of two large

trees, rendered concave, and joined together, not side by side, but end ways; the junction being exactly across the middle of the canoe; they are therefore very long and disproportionably narrow, and have neither decks nor masts; they are, however, very roomy; for I observed in one of them four horses, and several people crossing over the river. When we arrived at this ferry, with a view to pass over to that part of the town in which the king resides, we found a great number waiting for a passage; they looked at me with silent wonder, and I distinguished, with concern many Moors among them. There were three different places of embarkation, and the ferrymen were very diligent and expeditious; but, from the crowd of people, I could not immediately obtain a passage; and sat down upon the bank of the river, to wait for a more favourable opportunity. The view of this extensive city; the numerous canoes upon the river; the crowded population, and the cultivated state of the surrounding country, formed altogether a prospect of civilization and magnificence, which I little expected to find in the bosom of Africa.

I waited more than two hours without having an opportunity of crossing the river; during which time, the people who had crossed carried information to Mansong, the king, that a white man was waiting for a passage, and was coming to see him. He immediately sent over one of his

chief men, who informed me that the king could not possibly see me, until he knew what had brought me into his country; and that I must not presume to cross the river without the king's permission. He therefore advised me to lodge at a distant village, to which he pointed, for the night; and said that in the morning he would give me further instructions how to conduct myself. This was very discouraging. However, as there was no remedy, I set off for the village; where I found, to my great mortification, that no person would admit me into his house. I was regarded with astonishment and fear, and was obliged to sit all day without victuals, in the shade of a tree; and the night threatened to be very uncomfortable, for the wind rose, and there was great appearance of a heavy rain; and the wild beasts are so very numerous in the neighbourhood, that I should have been under the necessity of climbing up the tree, and resting among the branches. About sunset, however, as I was preparing to pass the night in this manner, and had turned my horse loose, that he might graze at liberty, a woman, returning from the labours of the field, stopped to observe me, and perceiving that I was weary and dejected, inquired into my situation, which I briefly explained to her; whereupon, with looks of great compassion, she took up my saddle and bridle, and told me to follow her. Having conducted me

into her hut, she lighted up a lamp, spread a mat on the floor, and told me I might remain there for the night. Finding that I was very hungry, she said she would procure me something to eat. She accordingly went out, and returned in a short time with a very fine fish; which having caused to be half-broiled upon some embers, she gave me for supper. The rites of hospitality being thus performed towards a stranger in distress, my worthy benefactress (pointing to the mat, and telling me I might sleep there without apprehension) called to the female part of her family, who had stood gazing on me all the while in fixed astonishment, to resume their task of spinning cotton; in which they continued to employ themselves great part of the night. They lightened their labour by songs, one of which was composed extempore; for I was myself the subject of it. It was sung by one of the young women, the rest joining in a sort of chorus. The air was sweet and plaintive, and the words, literally translated, were these:—"The winds roared, and the rains fell. The poor white man, faint and weary, came and sat under our tree. He has no mother to bring him milk; no wife to grind his corn." *Chorus*—"Let us pity the white man; no mother has he," etc., etc. Trifling as this recital may appear to the reader, to a person in my situation, the circumstance was affecting in the highest degree. I was oppressed by

such unexpected kindness; and sleep fled from my eyes. In the morning I presented my compassionate landlady with two of the four brass buttons which remained on my waistcoat; the only recompense I could make her.

July 21st.—I continued in the village all this day in conversation with the natives, who came in crowds to see me; but was rather uneasy towards evening, to find that no message had arrived from the king; the more so as the people began to whisper, that Mansong had received some very unfavourable accounts of me from the Moors and Slatees residing at Sego; who, it seems, were exceedingly suspicious concerning the motives of my journey. I learnt that many consultations had been held with the king concerning my reception and disposal; and some of the villagers frankly told me, that I had many enemies, and must expect no favour.

July 22nd.—About eleven o'clock, a messenger arrived from the king, but he gave me very little satisfaction. He inquired particularly if I had brought any present, and seemed much disappointed when he was told that I had been robbed of everything by the Moors. When I proposed to go along with him, he told me to stop until the afternoon, when the king would send for me.

July 23rd.—In the afternoon another messenger arrived from Mansong, with a bag in his

hands. He told me it was the king's pleasure that I should depart forthwith from the vicinage of Sego; but that Mansong wishing to relieve a white man in distress, had sent me five thousand cowries,* to enable me to purchase provisions in the course of my journey; the messenger added, that if my intentions were really to proceed to Jenné, he had orders to accompany me as a guide to Sansanding. I was at first puzzled to account for this behaviour of the king; but from the conversation I had with the guide, I had afterwards reason to believe that Mansong would willingly have admitted me into his presence at Sego, but was apprehensive he might not be able to protect me against the blind and inveterate malice of the Moorish inhabitants. His conduct, therefore, was at once prudent and liberal. The circumstances under which I made my appearance at Sego, were undoubtedly such as might create in the mind of the king a well-warranted suspicion that I wished to conceal the true object of my journey. He argued probably, as my guide argued: who, when he was told that I had come from a great distance, and through many dangers,

* Mention has already been made of these little shells (p. 19) which pass current as money, in many parts of the East Indies, as well as Africa. In Bambarra, and the adjacent countries, where the necessities of life are very cheap, one hundred of them would commonly purchase a day's provisions for myself and corn for my horse. I reckoned about two hundred and fifty cowries equal to one shilling.

to behold the Joliba river, naturally inquired, if there were no rivers in my own country, and whether one river was not like another. Notwithstanding this, and in spite of the jealous machinations of the Moors, this benevolent prince thought it sufficient, that a white man was found in his dominions, in a condition of extreme wretchedness; and that no other plea was necessary to entitle the sufferer to his bounty.

MUNGO PARK.

ON THE MARCH *

AFTER leaving the First Game Camp, we travelled many hours and miles over rolling hills piling ever higher and higher until they broke through a pass to illimitable plains. These plains were mantled with the dense scrub, looking from a distance and from above like the nap of soft green velvet. Here and there this scrub broke in round or oval patches of grass plain. Great mountain ranges peered over the edge of a horizon. Lesser mountain peaks of fantastic shapes—sheer Yosemite cliffs, single buttes, castles—had ventured singly from behind that same horizon barricade. The course of a river was marked by a meandering line of green jungle.

It took us two days to get to that river. Our intermediate camp was halfway down the pass. We ousted a hundred indignant straw-coloured monkeys and twice as many baboons from the tiny flat above the water hole. They bobbed away cursing over their shoulders at us. Next day we debouched on the plains. They were rolling, densely grown, covered with volcanic stones,

* From "The Land of Footprints," by permission of the author.

swarming with game of various sorts. The men marched well. They were happy, for they had had a week of meat; and each carried a light lunch of sun-dried biltong or jerky. Some mistaken individuals had attempted to bring along some "fresh" meat. We found it advisable to pass to windward of these; but they themselves did not seem to mind.

It became very hot; for we were now descending to the lower elevations. The marching through long grass and over volcanic stones was not easy. Shortly we came out on stumbly hills, mostly rock, very dry, grown with cactus and discouraged desiccated thorn scrub. Here the sun reflected powerfully and the bearers began to flag.

Then suddenly, without warning, we pitched over a little rise to the river.

No more marvellous contrast could have been devised. From the blasted barren scrub country we plunged into the lush jungle. It was not a very wide jungle, but it was sufficient. The trees were large and variegated, reaching to a high and spacious upper story above the ground tangle. From the massive limbs hung vines, festooned and looped like great serpents. Through this upper corridor flitted birds of bright hue or striking variegation. We did not know many of them by name, nor did we desire to; but were content with the impression of vivid flashing

movement and colour. Various monkeys swung, leaped and galloped slowly away before our advance; pausing to look back at us curiously, the ruffs of fur standing out all around their little black faces. The lower half of the forest jungle, however, had no spaciousness at all, but a certain breathless intimacy. Great leaved plants as tall as little trees, and trees as small as big plants, bound together by vines, made up the "deep impenetrable jungle" of our childhood imagining. Here were rustlings, sudden scurryings, half-caught glimpses, once or twice a crash as some greater animal made off. Here and there through the thicket wandered well beaten trails, wide, but low, so that to follow them one would have to bend double. These were the paths of rhinoceroses. The air smelt warm and moist and earthy, like the odour of a greenhouse.

We skirted this jungle until it gave way to let the plain down to the river. Then, in an open grove of acacias, and fairly on the river's bank, we pitched our tents.

These acacia trees were very noble big chaps, with many branches and a thick shade. In their season they are wonderfully blossomed with white, with yellow, sometimes even with vivid red flowers. Beneath them was only a small matter of ferns to clear away.

Before us the sodded bank rounded off ten feet to the river itself. At this point far up in its

youth it was a friendly river. Its noble width ran over shallows of yellow sand or of small pebbles. Save for unexpected deep holes one could wade across it anywhere. Yet it was very wide, with still reaches of water, with islands of gigantic papyrus, with sand bars dividing the current, and with always the vista for a greater or lesser distance down through the jungle along its banks. From our canvas chairs we could look through on one side to the arid country, and on the other to this tropical wonderland.

Yes, at this point in its youth it was indeed a friendly river in every sense of the word. There are three reasons, ordinarily, why one cannot bathe in the African rivers. In the first place, they are nearly all disagreeably muddy; in the second place, cold water in a tropical climate causes horrible congestions; in the third place they swarm with crocodiles and hippos. But this river was as yet unpolluted by the alluvial soil of the lower countries; the sun on its shallows had warmed its waters almost to blood heat; and the beasts found no congenial haunts in these clear shoals. Almost before our tents were up the men were splashing. And always my mental image of that river's beautiful expanse must include round black heads floating like gourds where the water ran smoothest.

Our tents stood all in a row facing the stream,

the great trees at their backs. Down in the grove the men had pitched their little white shelters. Happily they settled down to ease. Settling down to ease, in the case of the African porter, consists in discarding as many clothes as possible. While on the march he wears everything he owns; whether from pride or a desire to simplify transportation I am unable to say. He is supplied by his employer with a blanket and jersey. As supplementals he can generally produce a half dozen white man's ill-assorted garments: an old shooting coat, a ragged pair of khaki breeches, a kitchen tablecloth for a skirt, or something of the sort. If he can raise an overcoat he is happy, especially if it happen to be a long, thick *winter* overcoat. The possessor of such a garment will wear it conscientiously throughout the longest journey and during the hottest noons. But when he relaxes in camp, he puts away all these prideful possessions and turns out in the savage simplicity of his red blanket. Draped negligently, sometimes very negligently, in what may be termed semi-toga fashion, he stalks about or squats before his little fire in all the glory of a regained savagery. The contrast of the red with his red bronze or black skin, the freedom and grace of his movements, the upright carriage of his fine figure, and the flickering savagery playing in his eyes are very effective.

Our men occupied their leisure variously and

happily. A great deal of time they spent before their tiny fires roasting meat and talking. This talk was almost invariably of specific personal experiences. They bathed frequently and with pleasure. They slept. Between times they fashioned ingenious affairs of ornament or use: bows and arrows, throwing clubs, snuff-boxes of the tips of antelope horns, bound prettily with bright wire, wooden swords beautifully carved in exact imitation of the white man's service weapon, and a hundred other such affairs. At this particular time also they were much occupied in making sandals against the thorns. These were flat soles of rawhide, the edges pounded to make them curl up a trifle over the foot, fastened by thongs; very ingenious, and very useful. To their task they brought song. The labour of Africa is done to song; weird minor chanting starting high in the falsetto to trickle unevenly down to the lower registers, or where the matter is one of serious effort, an antiphony of solo and chorus. From all parts of the camp come these softly modulated chantings, low and sweet, occasionally breaking into full voice as the inner occasion swells, then almost immediately falling again to the murmuring undertone of more concentrated attention.

The red blanket was generally worn knotted from one shoulder or bound around the waist Malay fashion. When it turned into a cowl, with

a miserable and humpbacked expression, it became the Official Badge of Illness. No matter what was the matter that was the proper thing to do—to throw the blanket over the head and to assume as miserable a demeanour as possible. A sore toe demanded just as much concentrated woe as a case of pneumonia.

Sick call was cried after the day's work was finished. Then M'ganga or one of the askaris lifted up his voice.

"N'gonjwa! n'gonjwa!" he shouted, and at the shout the red cowls gathered in front of the tent.

Three things were likely to be the matter: too much meat, fever, or pus infection from slight wounds. To these in the rainy season would be added the various sorts of colds. That meant either Epsom salts, quinine, or a little excursion with the lancet and permanganate. The African traveller gets to be heap big medicine man within these narrow limits.

All the red cowls squatted miserably, oh, very miserably, in a row. The headman stood over them rather fiercely. We surveyed the lot contemplatively, hoping to heaven that nothing complicated was going to turn up. One of the tent boys hovered in the background as dispensing chemist.

"Well," said F. at last, "what's the matter with you?"

The man indicated pointed to his head and the back of his neck and groaned. If he had a slight headache he groaned just as much as though his head was splitting. F. asked a few questions, and took his temperature. The clinical thermometer is in itself considered big medicine, and often does much good.

"Too much meat, my friend," remarked F. in English, and to his boy in Swahili, "bring the cup."

He put in this cup a triple dose of Epsom salts. The African requires three times a white man's dose. This, pathologically, was all that was required: but psychologically the job was just begun. Your African can do wonderful things with his imagination. If he thinks he is going to die, die he will, and very promptly, even though he is ailing of the most trivial complaint. If he thinks he is going to get well, he is very apt to do so in face of extraordinary odds. Therefore the white man desires not only to start his patient's internal economy with Epsom salts, but also to stir his faith. To this end F. added to that triple dose of medicine a spoonful of Chutney, one of Worcestershire sauce, a few grains of quinine, Sparklets water and a crystal or so of permanganate to turn the mixture to a beautiful pink. This assortment the patient drank with gratitude—and the tears running down his cheeks.

"He will carry a load to-morrow," F. told the attentive M'ganga.

The next patient had fever. This one got twenty grains of quinine in water.

"This man carries no load to-morrow," was the direction, "but he must not drop behind."

Two or three surgical cases followed. Then a big Kavirondo rose to his feet.

"Nini?" demanded F.

"Homa—fever," whined the man.

F. clapped his hand on the back of the other's neck.

"I think," he remarked contemplatively in English, "that you're a liar, and want to get out of carrying your load."

The clinical thermometer showed no evidence of temperature.

"I'm pretty sure you're a liar," observed F. in the pleasantest conversational tone and still in English, "but you may be merely a poor diagnostician. Perhaps your poor insides couldn't get away with that rotten meat I saw you lugging around. We'll see."

So he mixed a pint of medicine.

"There's Epsom salts for the real part of your trouble," observed F., still talking to himself, "and here's a few things for the fake."

He then proceeded to concoct a mixture whose recoil was the exact measure of his imagination. The imagination was only limited by the neces-

sity of keeping the mixture harmless. Every hot, biting, nauseous horror in camp went into that pint measure.

"There," concluded F., "if you drink that and come back again to-morrow for treatment, I'll believe you *are* sick."

Without undue pride I would like to record that I was the first to think of putting in a peculiarly nauseous gun oil, and thereby acquired a reputation of making tremendous medicine.

So implicit is this faith in white man's medicine that at one of the Government posts we were approached by one of the secondary chiefs of the district. He was a very nifty savage, dressed for calling, with his hair done in ropes like a French poodle's, his skin carefully oiled and reddened, his armlets and necklets polished, and with the ceremonial ball of black feathers on the end of his long spear. His gait was the peculiar mincing teeter of savage conventional society. According to custom, he approached unsmiling, spat carefully in his palm, and shook hands. Then he squatted and waited.

"What is it?" we asked after it became evident he really wanted something besides the pleasure of our company.

"N'dowa—medicine," said he.

"Why do you not go the Government dispensary?" we demanded.

"The doctor there is an Indian; I want *real*

medicine, white man's medicine," he explained.

Immensely flattered, of course, we wanted further to know what ailed him.

"Nothing," said he blandly, "nothing at all; but it seemed an excellent chance to get good medicine."

After the clinic was all attended to, we retired to our tents and the screeching-hot bath so graceful in the tropics. When we emerged, in our mosquito boots and pajamas, the daylight was gone. Scores of little blazes licked and leaped in the velvet blackness round about, casting the undergrowth and the lower branches of the trees into flat planes like the cardboard of a stage setting. Cheerful, squatted figures sat in silhouette or in the relief of chance high light. Long switches of meat roasted before the fires. A hum of talk, bursts of laughter, the crooning of minor chants mingled with the crackling of thorns. Before our tents stood the table set for supper. Beyond it lay the pile of firewood, later to be burned on the altar of our safety against beasts. The moonlight was casting milky shadows over the river and under the trees opposite. In those shadows gleamed many fireflies. Overhead were millions of stars, and a little breeze that wandered through upper branches.

But in Equatorial Africa the simple bands of velvet black against the spangled brightnesses that make up the visual night world, must give way

in interest to the other world of sound. The air hums with an undertone of insects; the plain and hill and jungle are populous with voices furtive or bold. In daytime one sees animals enough, in all conscience, but only at night does he sense the almost oppressive feeling of the teeming life about him. The darkness is peopled. Zebras bark, bucks blow or snort or make the weird noises of their respective species; hyenas howl; out of an immense simian silence a group of monkeys suddenly break into chatterings; ostriches utter their deep hollow boom; small things scurry and squeak; a certain weird bird of the curlew or plover sort wails like a lonesome soul. Especially by the river, as here, are the boomings of the weirdest of weird bullfrogs, and the splashings and swishings of crocodile and hippopotamus. One is impressed with the busyness of the world surrounding him; every bird or beast, the hunter and the hunted, is the centre of many important affairs. The world swarms.

And then, some miles away a lion roars, the earth and air vibrating to the sheer power of the sound. The world falls to a blank dead silence. For a full minute every living creature of the jungle or of the veldt holds its breath. Their lord has spoken.

After dinner we sat in our canvas chairs, smoking. The guard fire in front of our tent had been lit. On the other side of it stood one of our

askaris leaning on his musket. He and his three companions, turn about, keep the flames bright against the fiercer creatures.

After a time we grew sleepy. I called Saa-sita and entrusted to him my watch. On the crystal of this I had pasted a small piece of surgeon's plaster. When the hour hand reached the surgeon's plaster, he must wake us up. Saa-sita was a very conscientious and careful man. One day I took some time hitching my pedometer properly to his belt: I could not wear it effectively myself because I was on horseback. At the end of the ten-hour march it registered a mile and a fraction. Saa-sita explained that he wished to take especial care of it, so he had wrapped it in a cloth and carried it all day in his hand!

We turned in. As I reached over to extinguish the lantern I issued my last command for the day.

"Watcha kalele, Saa-sita," I told the askari; and at once he lifted up his voice to repeat my words. "Watcha kalele!" Immediately from the Responsible all over camp the word came back—from gunbearers, from M'ganga, from tent boys—"kalele! kalele! kalele!"

Thus commanded, the boisterous fun, the low croon of intimate talk, the gently rising and falling tide of melody fell to complete silence. Only remained the crackling of the fire and the innumerable voices of the tropical night.

STEWART EDWARD WHITE.

THE FAITHFUL RIVER*

THE estuaries of rivers appeal strongly to an adventurous imagination. This appeal is not always a charm, for there are estuaries of a particularly dispiriting ugliness: lowlands, mudflats, or perhaps barren sandhills without beauty of form or amenity of aspect, covered with a shabby and scanty vegetation conveying the impression of poverty and uselessness. Sometimes such an ugliness is merely a repulsive mask. A river whose estuary resembles a breach in a sand rampart may flow through a most fertile country. But all the estuaries of great rivers have their fascination, the attractiveness of an open portal. Water is friendly to man. The ocean, a part of Nature farthest removed in the unchangeableness and majesty of its might from the spirit of mankind, has ever been a friend to the enterprising nations of the earth. And of all the elements this is the one to which men have always been prone to trust themselves, as if its immensity held a reward as vast as itself.

From the offing the open estuary promises every possible fruition to adventurous hopes.

* From "The Mirror of the Sea" by permission.

That road open to enterprise and courage invites the explorer of coasts to new efforts towards the fulfilment of great expectations. The commander of the first Roman galley must have looked with an intense absorption upon the estuary of the Thames as he turned the beaked prow of his ship to the westward under the brow of the North Foreland. The estuary of the Thames is not beautiful; it has no noble features, no romantic grandeur of aspect, no smiling geniality; but it is wide open, spacious, inviting, hospitable at the first glance, with a strange air of mysteriousness which lingers about it to this very day. The navigation of his craft must have engrossed all the Roman's attention in the calm of a summer's day (he would choose his weather), when the single row of long sweeps (the galley would be a light one, not a trireme) could fall in easy cadence upon a sheet of water like plate-glass, reflecting faithfully the classic form of his vessel and the contour of the lonely shores close on his left hand. I assume he followed the land and passed through what is at present known as Margate Roads, groping his careful way along the hidden sandbanks, whose every tail and spit has its beacon or buoy nowadays. He must have been anxious, though no doubt he had collected beforehand on the shores of the Gauls a store of information from the talk of traders, adventurers, fishermen, slavedealers,

pirates—all sorts of unofficial men connected with the sea in a more or less reputable way. He would have heard of channels and sandbanks, of natural features of the land useful for sea-marks, of villages and tribes and modes of barter and precautions to take: with the instructive tales about native chiefs dyed more or less blue, whose character for greediness, ferocity, or amiability must have been expounded to him with that capacity for vivid language which seems joined naturally to the shadiness of moral character and recklessness of disposition. With that sort of spiced food provided for his anxious thought, watchful for strange men, strange beasts, strange turns of the tide, he would make the best of his way up, a military seaman with a short sword on thigh and a bronze helmet on his head, the pioneer post-captain of an imperial fleet. Was the tribe inhabiting the Isle of Thanet of a ferocious disposition, I wonder, and ready to fall, with stone-studded clubs and wooden lances hardened in the fire, upon the backs of unwary mariners?

Amongst the great commercial streams of these islands, the Thames is the only one I think open to romantic feeling, from the fact that the sight of human labour and the sounds of human industry do not come down its shores to the very sea, destroying the suggestion of mysterious vastness caused by the configuration of the shore.

The broad inlet of the shallow North Sea passes gradually into the contracted shape of the river; but for a long time the feeling of the open water remains with the ship steering to the westward through one of the lighted and buoyed passages of the Thames, such as Queen's Channel, Prince's Channel, Four-Fathom Channel; or else coming down the Swin from the north. The rush of the yellow flood-tide hurries her up as if into the unknown between the two fading lines of the coast. There are no features to this land, no conspicuous, far-famed landmarks for the eye; there is nothing so far down to tell you of the greatest agglomeration of mankind on earth dwelling no more than five-and-twenty miles away, where the sun sets in a blaze of colour flaming on a gold background, and the dark, low shores trend towards each other. And in the great silence the deep, faint booming of the big guns being tested at Shoeburyness hangs about the Nore—a historical spot in the keeping of one of England's appointed guardians.

The Nore sand remains covered at low-water, and never seen by human eye; but the Nore is a name to conjure with visions of historical events, of battles, of fleets, of mutinies, of watch and ward kept upon the great throbbing heart of the State. This ideal point of the estuary, this centre of memories, is marked upon the steely grey ex-

panse of the waters by a lightship painted red that, from a couple of miles off, looks like a cheap and bizarre little toy. I remember how, on coming up the river for the first time, I was surprised at the smallness of that vivid object—a tiny warm speck of crimson lost in an immensity of grey tones. I was startled, as if of necessity the principal beacon in the waterway of the greatest town on earth should have presented imposing proportions. And, behold! the brown sprit-sail of a barge hid it entirely from my view.

Coming in from the eastward, the bright colouring of the lightship marking the part of the river committed to the charge of an Admiral (the Commander-in-Chief at the Nore) accentuates the dreariness and the great breadth of the Thames Estuary. But soon the course of the ship opens the entrance of the Medway, with its men-of-war moored in line, and the long wooden jetty of Port Victoria, with its few low buildings like the beginning of a hasty settlement upon a wild and unexplored shore. The famous Thames barges sit in brown clusters upon the water with an effect of birds floating upon a pond. On the imposing expanse of the great estuary the traffic of the port where so much of the world's work and the world's thinking is being done becomes insignificant, scattered, streaming away in thin lines of ships stringing themselves out into the eastern quarter through the various navigable

channels of which the Nore lightship marks the divergence. The coasting traffic inclines to the north; the deep-water ships steer east with a southern inclination, on through the Downs, to the most remote ends of the world. In the widening of the shores sinking low in the grey, smoky distances the greatness of the sea receives the mercantile fleet of good ships that London sends out upon the turn of every tide. They follow each other, going very close by the Essex shore. Such as the beads of a rosary told by businesslike ship-owners for the greater profit of the world they slip one by one into the open: while in the offing the inward-bound ships come up singly and in bunches from under the sea horizon closing the mouth of the river between Orfordness and North Foreland. They all converge upon the Nore, the warm speck of red upon the tones of drab and grey, with the distant shores running together towards the west, low and flat, like the sides of an enormous canal. The sea-reach of the Thames is straight, and, once Sheerness is left behind, its banks seem very uninhabited, except for the cluster of houses which is Southend, or here and there a lonely wooden jetty where petroleum ships discharge their dangerous cargoes, and the oil-storage tanks, low and round with slightly domed roofs, peep over the edge of the foreshore, as it were a village of Central African huts imitated in iron. Bordered by the black and

shining mudflats, the level marsh extends for miles. Away in the far background the land rises, closing the view with a continuous wooded slope, forming in the distance an interminable rampart overgrown with bushes.

Then, on the slight turn of the Lower Hope Reach, clusters of factory chimneys come distinctly into view, tall and slender above the squat ranges of cement works in Grays and Greenhithe. Smoking quietly at the top against the great blaze of a magnificent sunset, they give an industrial character to the scene, speak of work, manufactures, and trade as palm-groves on the coral strands of distant islands speak of the luxuriant grace, beauty, and vigour of tropical nature. The houses of Gravesend crowd upon the shore with an effect of confusion as if they had tumbled down haphazard from the top of the hill at the back. The flatness of the Kentish shore ends there. A fleet of steam-tugs lies at anchor in front of the various piers. A conspicuous church spire, the first seen distinctly coming from the sea, has a thoughtful grace, the serenity of a fine form above the chaotic disorder of men's houses. But on the other side, on the flat Essex side, a shapeless and desolate red edifice, a vast pile of bricks with many windows and a slate roof more inaccessible than an Alpine slope, towers over the bend in monstrous ugliness, the tallest, heaviest building for miles around, a thing

like an hotel, like a mansion of flats (all to let), exiled into these fields out of a street in West Kensington. Just round the corner, as it were, on a pier defined with stone blocks and wooden piles, a white mast, slender like a stalk of straw and crossed by a yard like a knitting-needle, flying the signals of flag and balloon, watches over a set of heavy dock-gates. Mast-heads and funnel-tops of ships peep above the ranges of corrugated iron roofs. This is the entrance to Tilbury Dock, the most recent of all London docks, the nearest to the sea.

Between the crowded houses at Gravesend and the monstrous red-brick pile on the Essex shore the ship is surrendered fairly to the grasp of the river. That hint of loneliness, that soul of the sea which had accompanied her as far as the Lower Hope Reach, abandons her at the turn of the first bend above. The salt, acrid flavour is gone out of the air, together with a sense of unlimited space opening free beyond the threshold of sandbanks below the Nore. The waters of the sea rush on past Gravesend, tumbling the big mooring buoys laid along the face of the town; but the sea-freedom stops short there, surrendering the salt tide to the needs, the artifices, the contrivances of toiling men. Wharves, landing-places, dock-gates, waterside stairs, follow each other continuously right up to London Bridge, and the hum of men's work fills the

river with a menacing, muttering note as of a breathless, ever-driving gale. The waterway, so fair above and wide below, flows oppressed by bricks and mortar and stone, by blackened timber and grimed glass and rusty iron, covered with black barges, whipped up by paddles and screws, overburdened with craft, overhung with chains, overshadowed by walls making a steep gorge for its bed, filled with a haze of smoke and dust.

This stretch of the Thames from London Bridge to the Albert Docks is to other watersides of river ports what a virgin forest would be to a garden. It is a thing grown up, not made. It recalls a jungle by the confused, varied, and impenetrable aspect of the buildings that line the shore, not according to a planned purpose, but as if sprung up by accident from scattered seeds. Like the matted growth of bushes and creepers veiling the silent depths of an unexplored wilderness, they hide the depths of London's infinitely varied, vigorous, seething life. In other river ports it is not so. They lie open to their stream, with quays like broad clearings, with streets like avenues cut through thick timber for the convenience of trade. I am thinking now of river ports I have seen—of Antwerp, for instance; of Nantes or Bordeaux, or even old Rouen, where the night-watchmen of ships, elbows on rail, gaze at shop-windows and brilliant cafés, and see

the audience go in and come out of the opera-house. But London, the oldest and greatest of river ports, does not possess as much as a hundred yards of open quays upon its river front. Dark and impenetrable as night, like the face of a forest, is the London waterside. It is the waterside of watersides, where only one aspect of the world's life can be seen, and only one kind of men toils on the edge of the stream. The lightless walls seem to spring from the very mud upon which the stranded barges lie; and the narrow lanes coming down to the foreshore resemble the paths of smashed bushes and crumbled earth where big game comes to drink on the banks of tropical streams.

Behind the growth of the London waterside the docks of London spread out unsuspected, smooth, and placid, lost amongst the buildings like dark lagoons hidden in a thick forest. They lie concealed in the intricate growth of houses with a few stalks of mast-heads here and there overtopping the roof of some four-story warehouse.

It is a strange conjunction this of roofs, and mast-heads, of walls and yard-arms. I remember once having the incongruity of the relation brought home to me in a practical way. I was the chief officer of a fine ship, just docked with a cargo of wool from Sydney, after a ninety days' passage. In fact, we had not been in more than

half an hour and I was still busy making her fast to the stone posts of a very narrow quay in front of a lofty warehouse. An old man, with a grey whisker under the chin and brass buttons on his pilot-cloth jacket, hurried up along the quay hailing my ship by name. He was one of those officials called berthing-masters—not the one who had³ berthed us, but another who, apparently, had been busy securing a steamer at the other end of the dock. I could see from afar his hard blue eyes staring at us, as if fascinated, with a queer sort of absorption. I wondered what that worthy sea-dog had found to criticize in my ship's rigging. And I, too, glanced aloft anxiously. I could see nothing wrong there. But perhaps that superannuated fellow-craftsman was simply admiring the ship's perfect order aloft, I thought, with some secret pride; for the chief officer is responsible for his ship's appearance, and as to her outward condition, he is the man to praise or blame. Meantime the old salt ("ex-coasting skipper" was writ large all over his person) had hobbled up alongside in his bumpy, shiny boots, and, waving an arm, short and thick like the flipper of a seal, terminated by a paw red as an uncooked beefsteak, addressed the poop in a muffled, faint roaring voice, as if a sample of every North-Sea fog of his life had been permanently lodged in his throat: "Haul 'em round, Mr. Mate!" were his words. "If you don't look

sharp, you'll have your topgallant yards through the windows of that 'ere warehouse presently!" This was the only cause of his interest in the ship's beautiful spars. I own that for a time I was struck dumb by the bizarre associations of yard-arms and windowpanes. To break windows is the last thing one would think of in connection with a ship's topgallant yard, unless, indeed, one were an experienced berthing-master in one of the London docks. This old chap was doing his little share of the world's work with proper efficiency. His little blue eyes had made out the danger many hundred yards off. His rheumatically feet, tired with balancing that squat body for many years upon the decks of small coasters, and made sore by miles of tramping upon the flagstones of the dock side, had hurried up in time to avert a ridiculous catastrophe. I answered him pettishly, I fear, and as if I had known all about it before.

"All right, all right! can't do everything at once."

He remained near by, muttering to himself till the yards had been hauled round at my order, and then raised again his foggy, thick voice:

"None too soon," he observed, with a critical glance up at the towering side of the warehouse. "That's a half-sovereign in your pocket, Mr. Mate. You should always look first how you are

for them windows before you begin to breast in your ship to the quay."

It was good advice. But one cannot think of everything or foresee contacts of things apparently as remote as stars and hop-poles.

The view of ships lying moored in some of the older docks of London has always suggested to my mind the image of a flock of swans kept in the flooded backyard of grim tenement houses. The flatness of the walls surrounding the dark pool on which they float brings out wonderfully the flowing grace of the lines on which a ship's hull is built. The lightness of these forms, devised to meet the winds and the seas, makes, by contrast with the great piles of bricks, the chains and cables of their moorings appear very necessary, as if nothing less could prevent them from soaring upwards and over the roofs. The least puff of wind stealing round the corners of the dock buildings stirs these captives fettered by rigid shores. It is as if the soul of a ship were impatient of confinement. Those masted hulls, relieved of their cargo, become restless at the slightest hint of the wind's freedom. However tightly moored, they range a little at their berths, swaying imperceptibly the spirelike assemblages of cordage and spars. You can detect their impatience by watching the sway of the mast-heads against the motionless, the soulless gravity of

mortar and stones. As you pass alongside each hopeless prisoner chained to the quay, the slight grinding noise of the wooden fenders makes a sound of angry muttering. But, after all, it may be good for ships to go through a period of restraint and repose, as the restraint and self-communion of inactivity may be good for an unruly soul—not, indeed, that I mean to say that ships are unruly: on the contrary, they are faithful creatures, as so many men can testify. And faithfulness is a great restraint, the strongest bond laid upon the self-will of men and ships on this globe of land and sea.

This interval of bondage in the docks rounds each period of a ship's life with the sense of accomplished duty, of an effectively played part in the work of the world. The dock is the scene of what the world would think the most serious part in the light, bounding, swaying life of a ship. But there are docks and docks. The ugliness of some docks is appalling. Wild horses would not drag from me the name of a certain river in the north whose narrow estuary is inhospitable and dangerous, and whose docks are like a nightmare of dreariness and misery. Their dismal shores are studded thickly with scaffold-like, enormous timber structures, whose lofty heads are veiled periodically by the infernal gritty night of a cloud of coal-dust. The most important ingredient for getting the world's work along

is distributed there under the circumstances of the greatest cruelty meted out to helpless ships. Shut up in the desolate circuit of these basins you would think a free ship would droop and die like a wild bird put into a dirty cage. But a ship, perhaps because of her faithfulness to men, will endure an extraordinary lot of ill-usage. Still, I have seen ships issue from certain docks like half-dead prisoners from a dungeon, bedraggled, overcome, wholly disguised in dirt, and with their men rolling white eyeballs in black and worried faces raised to a heaven which, in its smoky and soiled aspect, seemed to reflect the sordidness of the earth below. One thing, however, may be said for the docks of the Port of London on both sides of the river: for all the complaints of their insufficient equipment, of their obsolete rules, of failure (they say) in the matter of quick dispatch, no ship need ever issue from their gates in a half-fainting condition. London is a general cargo port, as is only proper for the greatest capital of the world to be. General cargo ports belong to the aristocracy of the earth's trading places, and in that aristocracy London, as is its way, has a unique physiognomy.

The absence of picturesqueness cannot be laid to the charge of the docks opening into the Thames. For all my unkind comparisons to swans and backyards, it cannot be denied that each dock or group of docks along the north side

of the river has its own individual attractiveness. Beginning with the cosy little St. Katherine's Dock, lying overshadowed and black like a quiet pool amongst rocky crags, through the venerable and sympathetic London Docks, with not a single line of rails in the whole of their area and the aroma of spices lingering between its warehouses, with their far-famed wine-cellar—down through the interesting group of West India Docks, the fine docks at Blackwall, on past the Galleons Reach entrance of the Victoria and Albert Docks, right down to the vast gloom of the great basins in Tilbury, each of those places of restraint for ships has its own peculiar physiognomy, its own expression. And what makes them unique and attractive is their common trait of being romantic in their usefulness.

In their way they are as romantic as the river they serve is unlike all the other commercial streams of the world. The cosiness of the St. Katherine's Dock, the old-world air of the London Docks, remain impressed upon the memory. The docks down the river, abreast of Woolwich, are imposing by their proportions and the vast scale of the ugliness that forms their surroundings—ugliness so picturesque as to become a delight to the eye. When one talks of the Thames docks "beauty" is a vain word, but romance has lived too long upon this river not to have thrown a mantle of glamour upon its banks.

The antiquity of the port appeals to the imagination by the long chain of adventurous enterprises that had their inception in the town and floated out into the world on the waters of the river. Even the newest of the docks, the Tilbury Dock, shares in the glamour conferred by historical associations. Queen Elizabeth has made one of her progresses down there, not one of her journeys of pomp and ceremony, but an anxious business progress at a crisis of national history. The menace of that time has passed away, and now Tilbury is known by its docks. These are very modern, but their remoteness and isolation upon the Essex marsh, the days of failure attending their creation, invested them with a romantic air. Nothing in those days could have been more striking than the vast, empty basins, surrounded by miles of bare quays and the ranges of cargo-sheds, where two or three ships seemed lost like bewitched children in a forest of gaunt, hydraulic cranes. One received a wonderful impression of utter abandonment, of wasted efficiency. From the first the Tilbury Docks were very efficient and ready for their task, but they had come, perhaps, too soon into the field. A great future lies before Tilbury Docks. They will never fill a long-felt want (in the sacramental phrase that is applied to railways, tunnels, newspapers, and new editions of books). They were too early in the field. The want will never be felt because, free

of the trammels of the tide, easy of access, magnificent and desolate, they are already there, prepared to take and keep the biggest ships that float upon the sea. They are worthy of the oldest river port in the world.

And truth to say, for all the criticisms flung upon the heads of the dock companies, the other docks of the Thames are no disgrace to the town with a population greater than that of some commonwealths. The growth of London as a well-equipped port has been slow, while not unworthy of a great centre of distribution. It must not be forgotten that London has not the backing of great industrial districts or great fields of natural exploitation. In this it differs from Liverpool, from Cardiff, from Newcastle, from Glasgow; and therein the Thames differs from the Mersey, from the Tyne, from the Clyde. It is an historical river; it is a romantic stream flowing through the centre of great affairs, and for all the criticism of the river's administration, my contention is that its development has been worthy of its dignity. For a long time the stream itself could accommodate quite easily the oversea and coasting traffic. That was in the days when, in the part called the Pool, just below London Bridge, the vessels moored stem and stern in the very strength of the tide formed one solid mass like an island covered with a forest of gaunt, leafless trees; and when the trade had grown too big for the

river there came the St. Katherine's Docks and the London Docks, magnificent undertakings answering to the need of their time. The same may be said of the other artificial lakes full of ships that go in and out upon this high road to all parts of the world. The labour of the imperial waterway goes on from generation to generation, goes on day and night. Nothing ever arrests its sleepless industry but the coming of a heavy fog, which clothes the teeming stream in a mantle of impenetrable stillness.

After the gradual cessation of all sound and movement on the faithful river, only the ringing of ships' bells is heard, mysterious and muffled in the white vapour from London Bridge right down to the Nore, for miles and miles in a decrescendo tinkling, to where the estuary broadens out into the North Sea, and the anchored ships lie scattered thinly in the shrouded channels between the sandbanks of the Thames' mouth. Through the long and glorious tale of years of the river's strenuous service to its people these are its only breathing times.

JOSEPH CONRAD.

THE KHAN'S PALACE AT SHANDU

DEPARTING from the city last mentioned, and proceeding three days' journey in a north-easterly direction, you arrive at a city called Shandu, built by the grand khan Kublai, now reigning. In this he caused a palace to be erected, of marble and other handsome stones, admirable as well for the elegance of its design as for the skill displayed in its execution. The halls and chambers are all gilt, and very handsome. It presents one front towards the interior of the city, and the other towards the wall; and from each extremity of the building runs another wall to such an extent as to enclose sixteen miles in circuit of the adjoining plain, to which there is no access but through the palace. Within the bounds of this royal park there are rich and beautiful meadows, watered by many rivulets, where a variety of animals of the deer and goat kind are pastured, to serve as food for the hawks and other birds employed in the chase, whose mews are also in the grounds. The number of these birds is upwards of two hundred; and the grand khan goes in person, at least once in the week, to inspect them. Frequently, when he rides

about this enclosed forest, he has one or more small leopards carried on horseback, behind their keepers; and when he pleases to give direction for their being slipped, they instantly seize a stag, or goat, or fallow deer, which he gives to his hawks, and in this manner he amuses himself. In the centre of these grounds, where there is a beautiful grove of trees, he has built a royal pavilion, supported upon a colonnade of handsome pillars, gilt and varnished. Round each pillar a dragon, likewise gilt, entwines its tail, whilst its head sustains the projection of the roof, and its talons or claws are extended to the right and left along the entablature. The roof is of bamboo cane, likewise gilt, and so well varnished that no wet can injure it. The bamboos used for this purpose are three palms in circumference and ten fathoms in length, and being cut at the joints, are split into two equal parts, so as to form gutters, and with these (laid concave and convex) the pavilion is covered; but to secure the roof against the effect of wind, each of the bamboos is tied at the ends to the frame. The building is supported on every side (like a tent) by more than two hundred very strong silken cords, and otherwise, from the lightness of the materials, it would be liable to oversetting by the force of high winds. The whole is constructed with so much ingenuity of contrivance that all the parts may be taken asunder, removed, and

again set up, at his majesty's pleasure. This spot he has selected for his recreation on account of the mild temperature and salubrity of the air, and he accordingly makes it his residence during three months of the year, namely, June, July, and August; and every year, on the twenty-eighth day of the moon, in the last of these months, it is his established custom to depart from thence, and proceed to an appointed place, in order to perform certain sacrifices, in the following manner. It is to be understood that his majesty keeps up a stud of about ten thousand horses and mares, which are white as snow; and of the milk of these mares no person can presume to drink who is not of the family descended from Jengizkhan, with the exception only of one other family, named Boriat, to whom that monarch gave the honourable privilege, in reward of valorous achievements in battle, performed in his own presence. So great, indeed, is the respect shown to these horses that, even when they are at pasture in the royal meadows or forests, no one dares to place himself before them, or otherwise to impede their movements. The astrologers whom he entertains in his service, and who are deeply versed in the diabolical art of magic, having pronounced it to be his duty, annually, on the twenty-eighth day of the moon in August, to scatter in the wind the milk taken from these mares, as a libation to all the spirits and idols

whom they adore, for the purpose of propitiating them and ensuring their protection of the people, male and female, of the cattle, the fowls, the grain and other fruits of the earth; on this account it is that his majesty adheres to the rule that has been mentioned, and on that particular day proceeds to the spot where, with his own hands, he is to make the offering of milk. In such occasions these astrologers, or magicians as they may be termed, sometimes display their skill in a wonderful manner; for if it should happen that the sky becomes cloudy and threatens rain, they ascend the roof of the palace where the grand khan resides at the time, and by the force of their incantations they prevent the rain from falling and stay the tempest; so that whilst, in the surrounding country, storms of rain, wind, and thunder are experienced, the palace itself remains unaffected by the elements. Those who operate miracles of this nature are persons of Tebeth and Kesmir, two classes of idolaters more profoundly skilled in the art of magic than the natives of any other country. They persuade the vulgar that these works are effected through the sanctity of their own lives and the merits of their penances; and presuming upon the reputation thus acquired, they exhibit themselves in a filthy and indecent state, regardless as well of what they owe to their character as of the respect due to those in whose presence they appear. They suffer

their faces to continue always uncleansed by washing and their hair uncombed, living altogether in a squalid style. They are addicted, moreover, to this beastly and horrible practice, that when any culprit is condemned to death, they carry off the body, dress it on the fire, and devour it; but of persons who die a natural death they do not eat the bodies. Besides the appellations before mentioned, by which they are distinguished from each other, they are likewise termed *baksi*, which applies to their religious sect or order,—as we should say, friars, preachers, or minors. So expert are they in their infernal art, they may be said to perform whatever they will; and one instance shall be given, although it may be thought to exceed the bounds of credibility. When the grand khan sits at meals, in his hall of state (as shall be more particularly described in the following book), the table which is placed in the centre is elevated to the height of about eight cubits, and at a distance from it stands a large buffet, where all the drinking vessels are arranged. Now, by means of their supernatural art, they cause the flagons of wine, milk, or any other beverage, to fill the cups spontaneously, without being touched by the attendants, and the cups to move through the air the distance of ten spaces until they reach the hand of the grand khan. As he empties them, they return to the place from whence they came; and this is done in the

presence of such persons as are invited by his majesty to witness the performance. These *baksis*, when the festival days of their idols draw near, go to the palace of the grand khan, and thus address him:—"Sire, be it known to your majesty, that if the honours of a holocaust are not paid to our deities, they will in their anger afflict us with bad seasons, with blight to our grain, pestilence to our cattle, and with other plagues. On this account we supplicate your majesty to grant us a certain number of sheep with black heads, together with so many pounds of incense and of lignum aloes, in order that we may be enabled to perform the customary rites with due solemnity." Their words, however, are not spoken immediately to the grand khan, but to certain great officers, by whom the communication is made to him. Upon receiving it he never fails to comply with the whole of their request; and accordingly, when the day arrives, they sacrifice the sheep, and by pouring out the liquor in which the meat has been seethed, in the presence of their idols, perform the ceremony of worship. In this country there are great monasteries and abbeys, so extensive indeed that they might pass for small cities, some of them containing as many as two thousand monks, who are devoted to the service of their divinities, according to the established religious customs of the people. These are clad in a better style of dress than the other in-

habitants; they shave their heads and their beards, and celebrate the festivals of their idols with the utmost possible solemnity, having bands of vocal music and burning tapers. Some of this class are allowed to take wives. There is likewise another religious order, the members of which are named *sensim*, who observe strict abstinence and lead very austere lives, having no other food than a kind of pollard, which they steep in warm water until the farinaceous part is separated from the bran, and in that state they eat it. This sect pay adoration to fire, and are considered by the others as schismatics, not worshipping idols as they do. There is a material difference between them in regard to the rules of their orders, and these last described never marry in any instance. They shave their heads and beards like the others, and wear hempen garments of a black or dull colour; but even if the material were silk, the colour would be the same. They sleep upon coarse mats, and suffer greater hardships in their mode of living than any people in the world. We shall now quit this subject, and proceed to speak of the great and wonderful acts of the supreme lord and emperor, Kublaï-kaan.

MARCO POLO.

A JOURNEY IN THE INTERIOR OF BORNEO

AS the wet season was approaching I determined to return to Saráwak, sending all my collections with Charles Allen round by sea, while I myself proposed to go up to the sources of the Sádong River, and descend by the Saráwak valley. As the route was somewhat difficult, I took the smallest quantity of baggage, and only one servant, a Malay lad named Bujon, who knew the language of the Sádong Dyaks, with whom he had traded. We left the mines on the 27th of November, and the next day reached the Malay village of Gúdong, where I stayed a short time to buy fruit and eggs, and called upon the Datu Bandar, or Malay governor of the place. He lived in a large and well-built house, very dirty outside and in, and was very inquisitive about my business, and particularly about the coal mines. These puzzle the natives exceedingly, as they cannot understand the extensive and costly preparations for working coal, and cannot believe it is to be used only as fuel when wood is so abundant and so easily obtained. It was evident that Europeans seldom came here, for numbers of women skeltered away as I walked

through the village; and one girl about ten or twelve years old, who had just brought a bamboo full of water from the river, threw it down with a cry of horror and alarm the moment she caught sight of me, turned round and jumped into the stream. She swam beautifully, and kept looking back as if expecting I would follow her, screaming violently all the time; while a number of men and boys were laughing at her ignorant terror.

At Jahi, the next village, the stream became so swift in consequence of a flood, that my heavy boat could make no way, and I was obliged to send it back and go on in a very small open one. So far the river had been very monotonous, the banks being cultivated as rice-fields, and little thatched huts alone breaking the unpicturesque line of muddy bank crowned with tall grasses, and backed by the top of the forest behind the cultivated ground. A few hours beyond Jahi we passed the limits of cultivation, and had the beautiful virgin forest coming down to the water's edge, with its palms and creepers, its noble trees, its ferns, and epiphytes. The banks of the river were, however, still generally flooded, and we had some difficulty in finding a dry spot to sleep on. Early in the morning we reached Empugnan, a small Malay village situated at the foot of an isolated mountain which had been visible from the mouth of the Simūnjon River. Beyond here the tides are not felt, and we now entered upon

a district of elevated forest, with a finer vegetation. Large trees stretch out their arms across the stream, and the steep, earthy banks are clothed with ferns and zingiberaceous plants.

Early in the afternoon we arrived at Tabókan, the first village of the Hill Dyaks. On an open space near the river about twenty boys were playing at a game something like what we call "prisoner's base"; their ornaments of beads and brass wire and their gay-coloured kerchiefs and waist-cloths showing to much advantage, and forming a very pleasing sight. On being called by Bujon, they immediately left their game to carry my things up to the "headhouse,"—a circular building attached to most Dyak villages, and serving as a lodging for strangers, the place for trade, the sleeping-room of the unmarried youths, and the general council-chamber. It is elevated on lofty posts, has a large fireplace in the middle and windows in the roof all round, and forms a very pleasant and comfortable abode. In the evening it was crowded with young men and boys, who came to look at me. They were mostly fine young fellows, and I could not help admiring the simplicity and elegance of their costume. Their only dress is the long "chawat," or waist-cloth, which hangs down before and behind. It is generally of blue cotton, ending in three broad bands of red, blue, and white. Those who can afford it wear a handkerchief on the head, which

is either red, with a narrow border of gold lace, or of three colours, like the "chawat." The large flat moon-shaped brass earrings, the heavy necklace of white or black beads, rows of brass rings on the arms and legs, and armlets of white shell, all serve and set off the pure reddish brown skin and jet-black hair. Add to this the little pouch containing materials for betel-chewing and a long slender knife, both invariably worn at the side, and you have the every-day dress of the young Dyak gentleman.

The "Orang Kaya," or rich man, as the chief of the tribe is called, now came in with several of the older men; and the "bitchára" or talk commenced, about getting a boat and men to take me on the next morning. As I could not understand a word of their language, which is very different from Malay, I took no part in the proceedings, but was represented by my boy Bujon, who translated to me most of what was said. A Chinese trader was in the house, and he, too, wanted men the next day; but on his hinting this to the Orang Kaya, he was sternly told that a white man's business was now being discussed, and he must wait another day before his could be thought about.

After the "bitchára" was over and the old chiefs gone, I asked the young men to play or dance, or amuse themselves in their accustomed way; and after some little hesitation they agreed

to do so. They first had a trial of strength, two boys sitting opposite each other, foot being placed against foot, and a stout stick grasped by both their hands. Each then tried to throw himself back, so as to raise his adversary up from the ground, either by main strength or by a sudden effort. Then one of the men would try his strength against two or three of the boys; and afterwards they each grasped their own ankle with a hand, and while one stood as firm as he could, the other swung himself round on one leg, so as to strike the other's free leg, and try to overthrow him. When these games had been played all round with varying success, we had a novel kind of concert. Some placed a leg across the knee, and struck the fingers sharply on the ankle, others beat their arms against their sides like a cock when he is going to crow, thus making a great variety of clapping sounds, while another with his hand under his armpit produced a deep trumpet note; and, as they all kept time very well, the effect was by no means displeasing. This seemed quite a favourite amusement with them, and they kept it up with much spirit.

The next morning we started in a boat about thirty feet long, and only twenty-eight inches wide. The stream here suddenly changes its character. Hitherto, though swift, it had been deep and smooth, and confined by steep banks. Now it rushed and rippled over a pebbly, sandy, or rocky

bed, occasionally forming miniature cascades and rapids, and throwing up on one side or the other broad banks of finely coloured pebbles. No paddling could make way here, but the Dyaks with bamboo poles propelled us along with great dexterity and swiftness, never losing their balance in such a narrow and unsteady vessel, though standing up and exerting all their force. It was a brilliant day, and the cheerful exertions of the men, the rushing of the sparkling waters, with the bright and varied foliage which from either bank stretched over our heads, produced an exhilarating sensation which recalled my canoe voyages on the grander waters of South America.

Early in the afternoon we reached the village of Borotói, and, though it would have been easy to reach the next one before night, I was obliged to stay, as my men wanted to return and others could not possibly go on with me without the preliminary talking. Besides, a white man was too great a rarity to be allowed to escape them, and their wives would never have forgiven them if, when they returned from the fields, they found that such a curiosity had not been kept for them to see. On entering the house to which I was invited, a crowd of sixty or seventy men, women, and children gathered round me, and I sat for half an hour like some strange animal submitted for the first time to the gaze of an inquiring public. Brass rings were here in the

greatest profusion, many of the women having their arms completely covered with them, as well as their legs from the ankle to the knee. Round the waist they wear a dozen or more coils of fine rattan stained red, to which the petticoat is attached. Below this are generally a number of coils of brass wire, a girdle of small silver coins, and sometimes a broad belt of brass ring armour. On their heads they wear a conical hat without a crown, formed of variously coloured beads, kept in shape by rings of rattan, and forming a fantastic but not unpicturesque head-dress.

Walking out to a small hill near the village, cultivated as a rice-field, I had a fine view of the country, which was becoming quite hilly, and towards the south, mountainous. I took bearings and sketches of all that was visible, an operation which caused much astonishment to the Dyaks who accompanied me, and produced a request to exhibit the compass when I returned. I was then surrounded by a larger crowd than before, and when I took my evening meal in the midst of a circle of about a hundred spectators anxiously observing every movement and criticizing every mouthful, my thoughts involuntarily recurred to the lions at feeding time. Like those noble animals, I too was used to it, and it did not affect my appetite. The children here were more shy than at Tabókan, and I could not persuade them to play. I therefore turned showman myself, and

exhibited the shadow of a dog's head eating, which pleased them so much that all the village in succession came out to see it. The "rabbit on the wall" does not do in Borneo, as there is no animal it resembles. The boys had tops shaped something like whipping-tops, but spun with a string.

The next morning we proceeded as before, but the river had become so rapid and shallow and the boats were all so small, that though I had nothing with me but a change of clothes, a gun, and a few cooking utensils, two were required to take me on. The rock which appeared here and there on the river-bank was an indurated clay-slate, sometimes crystalline, and thrown up almost vertically. Right and left of us rose isolated limestone mountains, their white precipices glistening in the sun and contrasting beautifully with the luxuriant vegetation that elsewhere clothed them. The river bed was a mass of pebbles, mostly pure white quartz, but with abundance of jasper and agate, presenting a beautifully variegated appearance. It was only ten in the morning when we arrived at Budw, and, though there were plenty of people about, I could not induce them to allow me to go on to the next village. The Orang Kaya said that if I insisted on having men, of course he would get them, but when I took him at his word and said I must have them, there came a fresh remon-

strance; and the idea of my going on that day seemed so painful that I was obliged to submit. I therefore walked out over the rice-fields, which are here very extensive, covering a number of the little hills and valleys into which the whole country seems broken up, and obtained a fine view of hills and mountains in every direction.

In the evening the Orang Kaya came in full dress (a spangled velvet jacket, but no trousers), and invited me over to his house, where he gave me a seat of honour under a canopy of white calico and coloured handkerchiefs. The great verandah was crowded with people, and large plates of rice with cooked and fresh eggs were placed on the ground as presents for me. A very old man then dressed himself in bright-coloured cloths and many ornaments, and sitting at the door, murmured a long prayer or invocation, sprinkling rice from a basin he held in his hand, while several large gongs were loudly beaten and a salute of muskets fired off. A large jar of rice wine, very sour, but with an agreeable flavour, was then handed round, and I asked to see some of their dances. These were, like most savage performances, very dull and ungraceful affairs; the men dressing themselves absurdly like women, and the girls making themselves as stiff and ridiculous as possible. All the time six or eight large Chinese gongs were being beaten by the vigorous arms of as many young men, producing

such a deafening discord that I was glad to escape to the round house, where I slept very comfortably with half a dozen smoke-dried human skulls suspended over my head.

The river was now so shallow that boats could hardly get along. I therefore preferred walking to the next village, expecting to see something of the country, but was much disappointed, as the path lay almost entirely through dense bamboo thickets. The Dyaks get two crops off the ground in succession; one of rice, and the other of sugarcane, maize, and vegetables. The ground then lies fallow eight or ten years, and becomes covered with bamboos and shrubs, which often completely arch over the path and shut out everything from the view. Three hours' walking brought us to the village of Senánkan, where I was again obliged to remain the whole day, which I agreed to do on the promise of the Orang Kaya that his men should next day take me through two other villages across to Sénna, at the head of the Saráwak River. I amused myself as I best could till evening, by walking about the high ground near, to get views of the country and bearings of the chief mountains. There was then another public audience, with gifts of rice and eggs, and drinking of rice wine. These Dyaks cultivate a great extent of ground, and supply a good deal of rice to Saráwak. They are rich in gongs, brass trays, wire, silver coins, and other articles in which a

Dyak's wealth consists; and their women and children are all highly ornamented with bead necklaces, shells, and brass wire.

In the morning I waited some time, but the men that were to accompany me did not make their appearance. On sending to the Orang Kaya I found that both he and another head-man had gone out for the day, and on inquiring the reason was told that they could not persuade any of their men to go with me because the journey was a long and fatiguing one. As I was determined to get on, I told the few men that remained that the chiefs had behaved very badly, and that I should acquaint the Rajah with their conduct, and I wanted to start immediately. Every man present made some excuse, but others were sent for, and by dint of threats and promises, and the exertion of all Bujon's eloquence, we succeeded in getting off after two hours' delay.

For the first few miles our path lay over a country cleared for rice-fields, consisting entirely of small but deep and sharply-cut ridges and valleys, without a yard of level ground. After crossing the Kayan River, a main branch of the Sádong, we got on to the lower slopes of the Seboran Mountain, and the path lay along a sharp and moderately steep ridge, affording an excellent view of the country. Its features were exactly those of the Himalayas in miniature, as they are described by Dr. Hooker and other

travellers; and looked like a natural model of some parts of those vast mountains on a scale of about a tenth, thousands of feet being here represented by hundreds. I now discovered the source of the beautiful pebbles which had so pleased me in the river-bed. The slaty rocks had ceased, and these mountains seemed to consist of a sandstone conglomerate, which* was in some places a mere mass of pebbles cemented together. I might have known that such small streams could not produce such vast quantities of well-rounded pebbles of the very hardest materials. They had evidently been formed in past ages, by the action of some continental stream or sea-beach, before the great island of Borneo had risen from the ocean. The existence of such a system of hills and valleys reproducing in miniature all the features of a great mountain region, has an important bearing on the modern theory, that the form of the ground is mainly due to atmospheric rather than to subterranean action. When we have a number of branching valleys and ravines running in many different directions within a square mile, it seems hardly possible to impute their formation, or even their origination, to rents and fissures produced by earthquakes. On the other hand, the nature of the rock, so easily decomposed and removed by water, and the known action of the abundant tropical rains, are in this case, at least, quite sufficient causes for

eral hundred feet long and fifty or sixty high, a single smooth bamboo four inches diameter forming the only pathway, while a slender handrail of the same material was often so shaky that it could only be used as a guide rather than a support.

Late in the afternoon we reached Sodos, situated on a spur between two streams, but so surrounded by fruit trees that little could be seen of the country. The house was spacious, clean and comfortable, and the people very obliging. Many of the women and children had never seen a white man before, and were very sceptical as to my being the same colour all over, as my face. They begged me to show them my arms and body, and they were so kind and good-tempered that I felt bound to give them some satisfaction, so I turned up my trousers and let them see the colour of my leg, which they examined with great interest.

In the morning early we continued our descent along a fine valley, with mountains rising 2,000 or 3,000 feet in every direction. The little river rapidly increased in size till we reached Senna, when it had become a fine pebbly stream navigable for small canoes. Here again the upheaved slaty rock appeared, with the same dip and direction as in the Sádong River. On inquiring for a boat to take me down the stream, I was told that the Senna Dyaks, although living on the

river-banks, never made or used boats. They were mountaineers who had only come down into the valley about twenty years before, and had not yet got into new habits. They are of the same tribe as the people of Menyerry and Sodos. They make good paths and bridges, and cultivate much mountain land, and thus give a more pleasing and civilized aspect to the country than where the people move about only in boats, and confine their cultivation to the banks of the streams.

After some trouble I hired a boat from a Malay trader, and found three Dyaks who had been several times with Malays to Saráwak, and thought they could manage it very well. They turned out very awkward, constantly running aground, striking against rocks, and losing their balance so as almost to upset themselves and the boat; offering a striking contrast to the skill of the Sea Dyaks. At length we came to a really dangerous rapid where boats were often swamped, and my men were afraid to pass it. Some Malays with a boat-load of rice here overtook us, and after safely passing down kindly sent back one of their men to assist me. As it was, my Dyaks lost their balance in the critical part of the passage, and had they been alone would certainly have upset the boat. The river now became exceedingly picturesque, the ground on each side being partially cleared for rice-fields, affording a good view of the country. Numerous little granaries

were built high up in trees overhanging the river, and having a bamboo bridge sloping up to them from the bank; and here and there bamboo suspension bridges crossed the stream, where overhanging trees favoured their construction.

I slept that night in the village of the Sebun-gow Dyaks, and the next day reached Saráwak, passing through a most beautiful country, where limestone mountains with their fantastic forms and white precipices shot up on every side, draped and festooned with a luxuriant vegetation. The banks of the Saráwak River are everywhere covered with fruit trees, which supply the Dyaks with a great deal of their food. The Mangosteen, Lansat, Rambutan, Jack, Jambou, and Blimbing, are all abundant; but most abundant and most esteemed is the Durian, a fruit about which very little is known in England, but which both by natives and Europeans in the Malay Archipelago is reckoned superior to all others. The old traveller Linschott, writing in 1599, says:—"It is of such an excellent taste that it surpasses in flavour all the other fruits of the world, according to those who have tasted it." And Doctor Paludanus adds:—"This fruit is of a hot and humid nature. To those not used to it, it seems at first to smell like rotten onions, but immediately they have tasted it they prefer it to all other food. The natives give it honourable titles, exalt it, and make verses on it." When brought

into a house the smell is often so offensive that some persons can never bear to taste it. This was my own case when I first tried it in Malacca. but in Borneo I found a ripe fruit on the ground, and, eating it out of doors, I at once became a confirmed Durian eater.

The Durian grows on a large and lofty forest tree, somewhat resembling an elm in its general character, but with a more smooth and scaly bark. The fruit is round or slightly oval, about the size of a large cocoanut, of a green colour, and covered all over with short stout spines the bases of which touch each other, and are consequently somewhat hexagonal, while the points are very strong and sharp. It is so completely armed, that if the stalk is broken off it is a difficult matter to lift one from the ground. The outer rind is so thick and tough, that from whatever height it may fall it is never broken. From the base to the apex five very faint lines may be traced, over which the spines arch a little; there are the sutures of the carpels, and show where the fruit may be divided with a heavy knife and a strong hand. The five cells are satiny white within, and are each filled with an oval mass of cream-coloured pulp, imbedded in which are two or three seeds about the size of chestnuts. This pulp is the eatable part, and its consistence and flavour are indescribable. A rich butter-like custard highly flavoured with almonds gives the

best general idea of it, but intermingled with it come wafts of flavour that call to mind cream-cheese, onion-sauce, brown sherry, and other incongruities. Then there is a rich glutinous smoothness in the pulp which nothing else possesses, but which adds to its delicacy. It is neither acid, nor sweet, nor juicy, yet one feels the want of none of these qualities, for it is perfect as it is. It produces no nausea or other bad effect, and the more you eat of it the less you feel inclined to stop. In fact to eat Durians is a new sensation, worth a voyage to the East to experience.

When the fruit is ripe it falls of itself, and the only way to eat Durians in perfection is to get them as they fall; and the smell is then less overpowering. When unripe, it makes a very good vegetable if cooked, and it is also eaten by the Dyaks raw. In a good fruit season large quantities are preserved salted, in jars and bamboos, and kept the year round, when it acquires a most disgusting odour to Europeans, but the Dyaks appreciate it highly as a relish with their rice. There are in the forest two varieties of wild Durians with much smaller fruits, one of them orange-coloured inside; and these are probably the origin of the large and fine Durians, which are never found wild. It would not, perhaps, be correct to say that the Durian is the best of all fruits, because it cannot supply the place of the subacid juicy kinds, such as the

orange, grape, mango, and mangosteen, whose refreshing and cooling qualities are so wholesome and grateful; but as producing a food of the most exquisite flavour it is unsurpassed. If I had to fix on two only, as representing the perfection of the two classes, I should certainly choose the Durian and the Orange as the king and queen of fruits.

The Durian is, however, sometimes dangerous. When the fruit begins to ripen it falls daily and almost hourly, and accidents not unfrequently happen to persons walking or working under the trees. When a Durian strikes a man in its fall, it produces a dreadful wound, the strong spines tearing open the flesh, while the blow itself is very heavy; but from this very circumstance death rarely ensues, the copious effusion of blood preventing the inflammation which might otherwise take place. A Dyak chief informed me that he had been struck down by a Durian falling on his head, which he thought would certainly have caused his death, yet he recovered in a very short time.

Poets and moralists, judging from our English trees and fruits, have thought that small fruits always grew on lofty trees, so that their fall should be harmless to man, while the large ones trailed on the ground. Two of the largest and heaviest fruits known, however, the Brazil-nut fruit (*Bertholletia*) and Durian, grow on

lofty forest trees, from which they fall as soon as they are ripe, and often wound or kill the native inhabitants. From this we may learn two things: first, not to draw general conclusions from a very partial view of nature; and secondly, that trees and fruits, no less than the varied productions of the animal kingdom, do not appear to be organized with exclusive reference to the use and convenience of man.

During my many journeys in Borneo, and especially during my various residences among the Dyaks, I first came to appreciate the admirable qualities of the Bamboo. In those parts of South America which I had previously visited, these gigantic grasses were comparatively scarce; and where found but little used, their place being taken as to one class of uses by the great variety of Palms, and as to another by calabashes and gourds. Almost all tropical countries produce Bamboos, and wherever they are found in abundance the natives apply them to a variety of uses. Their strength, lightness, smoothness, straightness, roundness, and hollowness, the facility and regularity with which they can be split, their many different sizes, the varying length of their joints, the ease with which they can be cut and with which holes can be made through them, their hardness outside, their freedom from any pronounced taste or smell, their great abundance, and the rapidity of their growth and in-

crease, are all qualities which render them useful for a hundred different purposes, to serve which other materials would require much more labour and preparation. The Bamboo is one of the most wonderful and most beautiful productions of the tropics, and one of nature's most valuable gifts to uncivilized man.

The Dyak houses are all raised on posts, and are often two or three hundred feet long and forty or fifty wide. The floor is always formed of strips split from large Bamboos, so that each may be nearly flat and about three inches wide, and these are firmly tied down with rattan to the joists beneath. When well made, this is a delightful floor to walk upon barefooted, the rounded surfaces of the bamboo being very smooth and agreeable to the feet, while at the same time affording a firm hold. But, what is more important, they form with a mat over them an excellent bed, the elasticity of the Bamboo and its rounded surface being far superior to a more rigid and a flatter floor. Here we at once find a use for Bamboo which cannot be supplied so well by another material without a vast amount of labour, palms and other substitutes requiring much cutting and smoothing, and not being equally good when finished. When, however, a flat, close floor is required, excellent boards are made by splitting open large Bamboos on one side only, and flattening them out so as to form

slabs eighteen inches wide and six feet long, with which some Dyaks floor their houses. These with constant rubbing of the feet and the smoke of years become dark and polished, like walnut or old oak, so that their real material can hardly be recognized. What labour is here saved to a savage whose only tools are an ax and a knife, and who, if he wants boards, must hew them out of the solid trunk of a tree, and must give days and weeks of labour to obtain a surface as smooth and beautiful as the Bamboo thus treated affords him. Again, if a temporary house is wanted, either by the native in his plantation or by the traveller in the forest, nothing is so convenient as the Bamboo, with which a house can be constructed with a quarter of the labour and time than if other materials are used.

As I have already mentioned, the Hill Dyaks in the interior of Saráwak make paths for long distances from village to village and to their cultivated grounds, in the course of which they have to cross many gullies and ravines, and even rivers; or sometimes, to avoid a long circuit, to carry the path along the face of a precipice. In all these cases the bridges they construct are of Bamboo, and so admirably adapted is the material for this purpose, that it seems doubtful whether they ever would have attempted such works if they had not possessed it. The Dyak bridge is simple but well designed. It consists

merely of stout Bamboos crossing each other at the roadway like the letter X, and rising a few feet above it. At the crossing they are firmly bound together, and to a large Bamboo which lays upon them and forms the only pathway, with a slender and often very shaky one to serve as a handrail. When a river is to be crossed an overhanging tree is chosen, from which the bridge is partly suspended and partly supported by diagonal struts from the banks, so as to avoid placing posts in the stream itself, which would be liable to be carried away by floods. In carrying a path along the face of a precipice, trees and roots are made use of for suspension; struts arise from suitable notches or crevices in the rocks, and if these are not sufficient, immense Bamboos fifty or sixty feet long are fixed on the banks or on the branch of a tree below. These bridges are traversed daily by men and women carrying heavy loads, so that any insecurity is soon discovered, and, as the materials are close at hand, immediately repaired. When a path goes over very steep ground, and becomes slippery in very wet or very dry weather, the Bamboo is used in another way. Pieces are cut about a yard long, and opposite notches being made at each end, holes are formed through which pegs are driven, and firm and convenient steps are thus formed with the greatest ease and celerity. It is true that much of this will decay in one or two

seasons, but it can be so quickly replaced as to make it more economical than using a harder and more durable wood.

One of the most striking uses to which Bamboo is applied by the Dyaks, is to assist them in climbing lofty trees, by driving in pegs. . . . This method is constantly used in order to obtain wax, which is one of the most valuable products of the country. The honey-bee of Borneo very generally hangs its combs under the branches of the Tappan, a tree which towers above all others in the forest, and whose smooth cylindrical trunk often rises a hundred feet without a branch. The Dyaks climb these lofty trees at night, building up their Bamboo ladder as they go, and bringing down gigantic honeycombs. These furnish them with a delicious feast of honey and young bees, besides the wax, which they sell to traders, and with the proceeds buy the much-coveted brass wire, earrings, and gold-edged handkerchiefs with which they love to decorate themselves. In ascending Durian and other fruit trees which branch at from thirty to fifty feet from the ground, I have seen them use the Bamboo pegs only, without the upright Bamboo which renders them so much more secure.

The outer rind of the Bamboo, split and shaved thin, is the strongest material for baskets; hen-coops, bird-cages, and conical fish-traps are very quickly made from a single joint, by split-

ing off the skin in narrow strips left attached at one end, while rings of the same material or of rattan are twisted in at regular distances. Water is brought to the houses by little aqueducts formed of large Bamboos split in half and supported on crossed sticks of various heights so as to give it a regular fall. Thin long-jointed Bamboos form the Dyaks' only water-vessels, and a dozen of them stand in the corner of every house. They are clean, light, and easily carried, and are in many ways superior to earthen vessels for the same purpose. They also make excellent cooking utensils; vegetables and rice can be boiled in them to perfection, and they are often used when travelling. Salted fruit or fish, sugar, vinegar, and honey are preserved in them instead of in jars or bottles. In a small Bamboo case, prettily carved and ornamented, the Dyak carries his sirih and lime for betel chewing, and his little long-bladed knife has a Bamboo sheath. His favourite pipe is a huge hubble-bubble, which he will construct in a few minutes by inserting a small piece of Bamboo for a bowl obliquely into a large cylinder about six inches from the bottom containing water, through which the smoke passes to a long slender Bamboo tube. There are many other small matters for which Bamboo is daily used, but enough has now been mentioned to show its value. In other parts of the Archipelago I have myself seen it applied to many new uses,

and it is probable that my limited means of observation did not make me acquainted with one-half the ways in which it is serviceable to the Dyaks of Saráwak.

While upon the subject of plants I may here mention a few of the more striking vegetable productions of Borneo. The wonderful Pitcher-plants, forming the genus *Nepenthes* of botanists, here reach their greatest development. Every mountain-top abounds with them, running along the ground, or climbing over shrubs and stunted trees; their elegant pitchers hanging in every direction. Some of these are long and slender, resembling in form the beautiful Philippine lace-sponge (*Euplectella*), which has now become so common; others are broad and short. Their colours are green, variously tinted and mottled with red or purple. The finest yet known were obtained on the summit of Kini-balou, in North-west Borneo. One of the broad sort, *Nepenthes rajah*, will hold two quarts of water in its pitcher. Another, *Nepenthes Edwardsiana*, has a narrow pitcher twenty inches long; while the plant itself grows to a length of twenty feet.

Ferns are abundant, but are not so varied as on the volcanic mountains of Java; and Tree-ferns are neither so plentiful nor so large as in that island. They grow, however, quite down to the level of the sea, and are generally slender and graceful plants from eight to fifteen feet

high. Without devoting much time to the search I collected fifty species of Ferns in Borneo, and I have no doubt a good botanist would have obtained twice the number. The interesting group of Orchids is very abundant, but, as is generally the case, nine-tenths of the species have small and inconspicuous flowers. Among the exceptions are the fine *Cœlogynes*, whose large clusters of yellow flowers ornament the gloomiest forests, and that most extraordinary plant, *Vanda Lowii*, which last is particularly abundant near some hot springs at the foot of the Peninjauh Mountain. It grows on the lower branches of trees; and its strange pendant flower-spikes often hang down so as almost to reach the ground. These are generally six or eight feet long, bearing large and handsome flowers three inches across, and varying in colour from orange to red, with deep purple-red spots. I measured one spike, which reached the extraordinary length of nine feet eight inches, and bore thirty-six flowers, spirally arranged upon a slender thread-like stalk. Specimens grown in our English hot-houses have produced flower-spikes of equal length, and with a much larger number of blossoms.

Flowers were scarce, as is usual in equatorial forests, and it was only at rare intervals that I met with anything striking. A few fine climbers were sometimes seen, especially a handsome crimson and yellow *Æschynanthus*, and a fine legu-

minous plant with clusters of large Cassia-like flowers of a rich purple colour. Once I found a number of small Anonaceous trees of the genus *Polyalthea*, producing a most striking effect in the gloomy forest shades. They were about thirty feet high, and their slender trunks were covered with large star-like crimson flowers, which clustered over them like garlands, and resembled some artificial decoration more than a natural product.

The forests abound with gigantic trees with cylindrical buttressed, or furrowed stems, while occasionally the traveller comes upon a wonderful fig-tree, whose trunk is itself a forest of stems and aerial roots. Still more rarely are found trees which appear to have begun growing in mid-air, and from the same point send out wide-spreading branches above and a complicated pyramid of roots descending for seventy or eighty feet to the ground below, and so spreading on every side, that one can stand in the very centre with the trunk of the tree immediately overhead. Trees of this character are found all over the Archipelago. I believe that they originate as parasites, from seeds carried by birds and dropped in the fork of some lofty tree. Hence descend aerial roots, clasping and ultimately destroying the supporting tree, which is in time entirely replaced by the humble plant which was at first dependent upon it. Thus we have an

actual struggle for life in the vegetable kingdom, not less fatal to the vanquished than the struggles among animals which we can so much more easily observe and understand. The advantage of quicker access to light and warmth and air, which is gained in one way by climbing plants, is here obtained by a forest tree, which has the means of starting in life at an elevation which others can only attain after many years of growth, and then only when the fall of some other tree has made room for them. Thus it is that in the warm and moist and equable climate of the tropics, each available station is seized upon, and becomes the means of developing new forms of life especially adapted to occupy it.

On reaching Saráwak early in December I found there would not be an opportunity of returning to Singapore till the latter end of January. I therefore accepted Sir James Brooke's invitation to spend a week with him and Mr. St. John at his cottage on Peninjauh. This is a very steep pyramidal mountain of crystalline basaltic rock, about a thousand feet high, and covered with luxuriant forest. There are three Dyak villages upon it, and on a little platform near the summit is the rude wooden lodge where the English Rajah was accustomed to go for relaxation and cool fresh air. It is only twenty miles up the river, but the road up the mountain is a succession of ladders on the face of precipices,

bamboo bridges over gullies and chasms, and slippery paths over rocks and tree-trunks and huge boulders as big as houses. A cool spring under an overhanging rock just below the cottage furnished us with refreshing baths and delicious drinking water, and the Dyaks brought us daily heaped-up baskets of Mangusteens and Lansats, two of the most delicious of the subacid tropical fruits. We returned to Saráwak for Christmas (the second I had spent with Sir James Brooke), when all the Europeans both in the town and from the out-stations enjoyed the hospitality of the Rajah, who possessed in a pre-eminent degree the art of making every one around him comfortable and happy.

A few days afterwards I returned to the mountain with Charles and a Malay boy named Ali and stayed there three weeks for the purpose of making a collection of land-shells, butterflies and moths, ferns and orchids. On the hill itself ferns were tolerably plentiful, and I made a collection of about forty species. But what occupied me most was the great abundance of moths which on certain occasions I was able to capture. As during the whole of my eight years' wanderings in the East I never found another spot where these insects were at all plentiful, it will be interesting to state the exact conditions under which I here obtained them.

On one side of the cottage there was a ver-

andah, looking down the whole side of the mountain and to its summit on the right, all densely clothed with forest. The boarded sides of the cottage were whitewashed, and the roof of the verandah was low, and also boarded and whitewashed. As soon as it got dark I placed my lamp on a table against the wall, and with pins, insect-forceps, net, and collecting-boxes by my side, sat down with a book. Sometimes during the whole evening only one solitary moth would visit me, while on other nights they would pour in, in a continual stream, keeping me hard at work catching and pinning till past midnight. They came literally by thousands. These good nights were very few. During the four weeks that I spent altogether on the hill I only had four really good nights, and these were always rainy, and the best of them soaking wet. But wet nights were not always good, for a rainy moonlight night produced next to nothing. All the chief tribes of moths were represented, and the beauty and variety of the species was very great. On good nights I was able to capture from a hundred to two hundred and fifty moths, and these comprised on each occasion from half to two-thirds that number of distinct species. Some of them would settle on the wall, some on the table, while many would fly up to the roof and give me a chase all over the verandah before I could secure them. In order to show the curious con-

nexion between the state of the weather and the degree in which moths were attracted to light, I add a list of my captures each night of my stay on the hill.

Date.	No. of Months.	Remarks.
1855.		
Dec. 13th	1	Fine; starlight.
" 14th	75	Drizzly and fog.
" 15th	41	Showery; cloudy.
" 16th	158	(120 species.) Steady rain.
" 17th	82	Wet; rather moonlight.
" 18th	9	Fine; moonlight.
" 19th	2	Fine; clear moonlight.
" 31st	200	(130 species.) Dark and windy; heavy rain.
1856.		
Jan. 1st	185	Very wet.
" 2d	68	Cloudy and showers.
" 3d	50	Cloudy.
" 4th	12	Fine.
" 5th	10	Fine.
" 6th	8	Very fine.
" 7th	8	Very fine.
" 8th	10	Fine.
" 9th	36	Showery.
" 10th	30	Showery.
" 11th	260	Heavy rain all night, and dark.
" 12th	56	Showery.
" 13th	44	Showery; some moonlight.
" 14th	4	Fine; moonlight.
" 15th	24	Rain; moonlight.
" 16th	6	Showers; moonlight.
" 17th	6	Showers; moonlight.
" 18th	1	Showers; moonlight.
Total. .	1,386	

It thus appears that on twenty-six nights I collected 1,386 moths, but that more than 800 of them were collected on four very wet and dark nights. My success here led me to hope that, by similar arrangements, I might in every island be able to obtain abundance of these insects; but, strange to say, during the six succeeding years I was never once able to make any collections at all approaching those at Saráwak. The reason of this I can pretty well understand to be owing to the absence of some one or other essential condition that were here all combined. Sometimes the dry season was the hindrance; more frequently residence in a town or village not close to virgin forest, and surrounded by other houses whose lights were a counter-attraction; still more frequently residence in a dark palm-thatched house, with a lofty roof, in whose recesses every moth was lost the instant it entered. This last was the greatest drawback, and the real reason why I never again was able to make a collection of moths; for I never afterwards lived in a solitary jungle-house with a low boarded and whitewashed verandah, so constructed as to prevent insects at once escaping into the upper part of the house, quite out of reach. After my long experience, my numerous failures, and my one success, I feel sure that if any party of naturalists ever make a yacht-voyage to explore the Malayan Archipelago, or any

other tropical region, making entomology one of their chief pursuits, it would well repay them to carry a small framed verandah, or a verandah-shaped tent of white canvas, to set up in every favourable situation, as a means of making a collection of nocturnal Lepidoptera, and also of obtaining rare specimens of Coleoptera and other insects. I make the suggestion here, because no one would suspect the enormous difference in results that such an apparatus would produce; and because I consider it one of the curiosities of a collector's experience to have found out that some such apparatus is required.

A. R. WALLACE.

THE DESERT

GAZA stands upon the verge of the Desert, and bears towards it the same kind of relation as a seaport bears to the sea. It is there that you *charter* your camels ("the ships of the Desert") and lay in your stores for the voyage.

These preparations kept me in the town for some days. Disliking restraint, I declined making myself the guest of the governor (as it is usual and proper to do), but took up my quarters at the caravanserai or *khan*, as they call it in that part of Asia.

Dthemetri had to make the arrangements for my journey, and in order to arm himself with sufficient authority for doing all that was required, he found it necessary to put himself in communication with the governor. The result of this diplomatic intercourse was, that the governor with his train of attendants came to me one day at my caravanserai and formally complained that Dthemetri had grossly insulted him. I was shocked at this, for the man had been always attentive and civil to me, and I was disgusted at the idea of his being rewarded with insult. Dthe-

metri was present when the complaint was made, and I angrily asked him whether it was true that he had really insulted the governor, and what the deuce he meant by it. This I asked with the full certainty that Dthemetri, as a matter of course, would deny the charge—would swear that a “wrong construction had been put upon his words, and that nothing was further from his thoughts,” etc., etc., after the manner of the Parliamentary people; but to my surprise he very plainly answered that he certainly *had* insulted the governor, and that rather grossly, but he said it was quite necessary to do this in order to “strike terror and inspire respect.” “Terror and respect! What on earth do you mean by that nonsense?”—“Yes, but without striking terror and inspiring respect, he (Dthemetri) would never be able to force on the arrangements for my journey, and Vossignoria would be kept at Gaza for a month!” This would have been awkward; and certainly I could not deny that poor Dthemetri had succeeded in his odd plan of inspiring respect, for at the very time that this explanation was going on in Italian, the governor seemed more than ever, and more anxiously, disposed to overwhelm me with assurances of goodwill and proffers of his best services. All this kindness or promise of kindness I naturally received with courtesy—a courtesy that greatly perturbed Dthemetri, for he evidently

feared that my civility would undo all the good that his insults had achieved.

You will find, I think, that one of the greatest drawbacks to the pleasure of travelling in Asia is the being obliged more or less to make your way by bullying. It is true that your own lips are not soiled by the utterance of all the mean words that are spoken for you, and that you don't even know of the sham threats, and the false promises, and the vainglorious boasts put forth by your dragoman; but now and then there happens some incident of the sort which I have just been mentioning, which forces you to believe or suspect that your dragoman is habitually fighting your battles for you in a way that you can hardly bear to think of.

A caravanseraï is not ill adapted to the purposes for which it is meant. It forms the four sides of a large quadrangular court: the ground floor is used for warehouses, the first floor for guests, and the open court for the temporary reception of the camels, as well as for the loading and unloading of their burthens and the transaction of mercantile business generally. The apartments used for the guests are small cells opening into a kind of corridor which runs through the inner sides of the court.

Whilst I lay near the opening of my cell, looking down into the court below, there arrived from the Desert a caravan—that is, a large

assemblage of travellers. It consisted chiefly of Moldavian pilgrims, who, to make their good work even more than complete, had begun by visiting the shrine of the Virgin in Egypt, and were now going on to Jerusalem. They had been overtaken in the Desert by a gale of wind, which so drove the sand, and raised up such mountains before them, that their journey had been terribly perplexed and obstructed, and their provisions (including water, the most precious of all) had been exhausted long before they reached the end of their toilsome march. They were sadly wayworn. The arrival of the caravan drew many and various groups into the court. There was the Moldavian pilgrim with his sable dress, and cap of fur, and heavy masses of bushy hair—the Turk with his various and brilliant garments—the Arab superbly stalking under his striped blanket that hung like royalty upon his stately form—the jetty Ethiopian in his slavish frock—the sleek, smooth-faced scribe with his comely pelisse, and his silver ink-box stuck in like a dagger at his girdle. And mingled with these were the camels,—some standing—some kneeling and being unladen—some twisting round their long necks and gently stealing the straw from out of their own pack-saddles.

In a couple of days I was ready to start. The way of providing for the passage of the Desert is this: there is an agent in the town who keeps

himself in communication with some of the Desert Arabs that are hovering within a day's journey of the place; a party of these, upon being guaranteed against seizure or other ill-treatment at the hands of the governor, come into the town, bringing with them the number of camels which you require, and then they stipulate for a certain sum to take you to the place of your destination in a given time. The agreement thus made by them includes a safe-conduct through their country, as well as the hire of the camels. According to the contract made with me I was to reach Cairo within ten days from the commencement of the journey. I had four camels—one for my baggage, one for each of my servants, and one for myself. Four Arabs, the owners of the camels, came with me on foot. My stores were a small soldier's tent; two bags of dried bread brought from the convent at Jerusalem, and a couple of bottles of wine from the same source; two goat-skins filled with water; tea, sugar, a cold tongue, and (of all things in the world) a jar of Irish butter which Mysseri had purchased from some merchant. There was also a small sack of charcoal, for the greater part of the Desert through which we were to pass is void of fuel.

The camel kneels to receive her load, and for a while she will allow the packing to go on with silent resignation, but when she begins to suspect that her master is putting more than a just

burthen upon her poor hump, she turns round her supple neck, and looks sadly upon the increasing load, and then gently remonstrates against the wrong with the sigh of a patient wife. If sighs will not move you, she can weep. You soon learn to pity, and soon to love her for the sake of her gentle and womanish ways.

You cannot, of course, put an English or any other riding saddle upon the back of the camel; but your quilt or carpet, or whatever you carry for the purpose of lying on at night, is folded and fastened on to the pack-saddle upon the top of the hump, and on this you ride, or rather sit. You sit as a man sits on a chair when he sits astride. I made an improvement on this plan: I had my English stirrups strapped on to the cross-bars of the pack-saddle; and thus, by gaining rest for my dangling legs, and gaining, too, the power of varying my position more easily than I could otherwise have done, I added very much to my comfort.

The camel, like the elephant, is one of the old-fashioned sort of animals that still walk along upon the (now nearly exploded) plan of the ancient beasts that lived before the Flood: she moves forward both her near legs at the same time, and then awkwardly swings round her off-shoulder and haunch, so as to repeat the manoeuvre on that side; her pace, therefore, is an odd, disjointed, and disjoining sort of movement

that is rather disagreeable at first, but you soon grow reconciled to it. The height to which you are raised is of great advantage to you in passing the burning sands of the Desert, for the air at such a distance from the ground is much cooler and more lively than that which circulates beneath.

For several miles beyond Gaza the land, freshened by the rains of the last week, was covered with rich verdure, and thickly jewelled with meadow-flowers so bright and fragrant that I began to grow almost uneasy—to fancy that the very Desert was receding before me, and that the long-desired adventure of passing its “burning sands” was to end in a mere ride across a field. But as I advanced, the true character of the country began to display itself with sufficient clearness to dispel my apprehensions, and before the close of my first day’s journey I had the gratification of finding that I was surrounded on all sides by a tract of real sand, and had nothing at all to complain of, except that there peeped forth at intervals a few isolated blades of grass, and many of those stunted shrubs which are the accustomed food of the camel.

Before sunset I came up with an encampment of Arabs (the encampment from which my camels had been brought), and my tent was pitched amongst theirs. I was now amongst the true Bedouins. Almost every man of this race

closely resembles his brethren; almost every man has large and finely-formed features, but his face is so thoroughly stripped of flesh, and the white folds from his head-gear fall down by his haggard cheeks so much in the burial fashion, that he looks quite sad and ghastly; his large dark orbs roll slowly and solemnly over the white of his deep-set eyes; his countenance shows painful thought and long suffering—the suffering of one fallen from a high estate. His gait is strangely majestic, and he marches along with his simple blanket, as though he were wearing the purple. His common talk is a series of piercing screams and cries very painful to hear.

The Bedouin women are not treasured up like the wives and daughters of other orientals, and indeed they seemed almost entirely free from the restraints imposed by jealousy. The feint which they made of concealing their faces from me was always slight: when they first saw me, they used to hold up a part of their drapery with one hand across their faces, but they seldom persevered very steadily in subjecting me to this privation. They were sadly plain. The awful haggardness that gave something of character to the faces of the men was sheer ugliness in the poor women. It is a great shame, but the truth is, that except when we refer to the beautiful devotion of the mother to her child, all the fine things we say and think about women apply only to

those who are tolerably good-looking or graceful. These Arab women were not within the scope of the privilege, and indeed were altogether much too plain and clumsy for this vain and lovesome world. They may have been good women enough, so far as, relates to the exercise of the minor virtues, but they had so grossly neglected the prime duty of looking pretty in this transitory life that I could not at all forgive them; they seemed to feel the weight of their guilt, and to be truly and humbly penitent. I had the complete command of their affections, for at any moment I could make their young hearts bound and their old hearts jump by offering a handful of tobacco; yet, believe me, it was not in the first *soirée* that my store of Latakiah was exhausted.

The Bedouin women have no religion; this is partly the cause of their clumsiness. Perhaps, if from Christian girls they would learn how to pray, their souls might become more gentle, and their limbs be clothed with grace.

You who are going into their country have a direct personal interest in knowing something about "Arab hospitality"; but the deuce of it is, that the poor fellows with whom I have happened to pitch my tent were scarcely ever in a condition to exercise that magnanimous virtue with much *éclat*; indeed Mysseri's canteen generously enabled me to outdo my hosts in the matter of entertainment. They were always courteous,

however, and were never backward in offering me the *youart*, a kind of whey, which is the principal delicacy to be found amongst the wandering tribes.

Practically, I think, Childe Harold would have found it a dreadful bore to make "the desert his dwelling-place," for, at all events, if he adopted the life of the Arabs, he would have tasted no solitude. The tents are partitioned, not so as to divide the Childe, and the "fair spirit" who is his "minister," from the rest of the world, but so as to separate the twenty or thirty brown men that sit screaming in the one compartment from the fifty or sixty brown women and children that scream and squeak in the other. If you adopt the Arab life for the sake of seclusion, you will be horribly disappointed, for you will find yourself in perpetual contact with a mass of hot fellow-creatures. It is true that all who are inmates of the same tent are related to each other, but I am not quite sure that that circumstance adds much to the charm of such a life.

In passing the Desert you will find your Arabs wanting to start and to rest at all sorts of odd times; they like, for instance, to be off at one in the morning, and to rest during the whole of the afternoon. You must not give way to their wishes in this respect: I tried their plan once, and found it very harassing and unwholesome. An ordinary tent can give you very little pro-

tection against heat, for the fire strikes fiercely through single canvas, and you soon find that whilst you lie crouching and striving to hide yourself from the blazing face of the sun, his power is harder to bear than it is when you boldly defy him from the airy heights of your camel.

It had been arranged with my Arabs that they were to bring with them all the food which they would want for themselves during the passage of the Desert, but as we rested at the end of the first day's journey by the side of an Arab encampment, my camel-men found all that they required for that night in the tents of their own brethren. On the evening of the second day, however, just before we encamped for the night, my four Arabs came to Dthemetri, and formally announced that they had not brought with them one atom of food, and that they looked entirely to my supplies for their daily bread. This was awkward intelligence. We were now just two days deep in the Desert, and I had brought with me no more bread than might be reasonably required for myself and my European attendants. I believed at the moment (for it seemed likely enough) that the men had really mistaken the terms of the arrangement, and feeling that the bore of being put upon half rations would be a less evil (and even to myself a less inconvenience) than the starvation of my Arabs, I at once told Dthemetri to assure them that my bread should

be equally shared with all. Dthemetri, however, did not approve of this concession; he assured me quite positively that the Arabs thoroughly understood the agreement, and that if they were now without food, they had wilfully brought themselves into this strait for the wretched purpose of bettering their bargain by the value of a few *paras*' worth of bread. This suggestion made me look at the affair in a new light. I should have been glad enough to put up with the slight privation to which my concession would subject me, and could have borne to witness the semi-starvation of poor Dthemetri with a fine philosophical calm, but it seemed to me that the scheme, if scheme it were, had something of audacity in it, and was well enough calculated to try the extent of my softness. I knew the danger of allowing such a trial to result in a conclusion that I was one who might easily be managed; and therefore, after thoroughly satisfying myself, from Dthemetri's clear and repeated assertions, that the Arabs had really understood the arrangement, I determined that they should not now violate it by taking advantage of my position in the midst of their big Desert; so I desired Dthemetri to tell them that they should touch no bread of mine. We stopped, and the tent was pitched; the Arabs came to me and prayed loudly for bread; I refused them.

"Then we die!"

“God’s will be done.”

I gave the Arabs to understand that I regretted their perishing by hunger, but that I should bear this calmly, like any other misfortune not my own—that, in short, I was happily resigned to *their* fate. The men would have talked a great deal, but they were under the disadvantage of addressing me through a hostile interpreter. They looked hard upon my face, but they found no hope there, so at last they retired, as they pretended, to lay them down and die.

In about ten minutes from this time I found that the Arabs were busily cooking their bread! Their pretence of having brought no food was false, and was only invented for the purpose of saving it. They had a good bag of meal, which they had contrived to stow away under the baggage, upon one of the camels, in such a way as to escape notice. In Europe the detection of a scheme like this would have occasioned a disagreeable feeling between the master and the delinquent; but you would no more recoil from an oriental on account of a matter of this sort, than in England you would reject a horse that had tried and failed to throw you. Indeed I felt quite good-humouredly towards my Arabs because they had so woefully failed in their wretched attempt, and because, as it turned out, I had done what was right; they too, poor fellows, evidently began to like me immensely, on account of the hard-

heartedness which had enabled me to baffle their scheme.

The Arabs adhere to those ancestral principles of bread-baking which have been sanctioned by the experience of ages. The very first baker of bread that ever lived must have done his work exactly as the Arab does at this day. He takes some meal, and holds it out in the hollow of his hands whilst his comrade pours over it a few drops of water; he then mashes up the moistened flour into a paste, pulls the lump of dough so made into small pieces, and thrusts them into the embers. His way of baking exactly resembles the craft or mystery of roasting chestnuts, as practised by children; there is the same prudence and circumspection in choosing a good berth for the morsel—the same enterprise and self-sacrificing valour in pulling it out with the fingers.

The manner of my daily march was this. At about an hour before dawn I rose and made the most of about a pint of water which I allowed myself for washing. Then I breakfasted upon tea and bread. As soon as the beasts were loaded I mounted my camel and pressed forward. My poor Arabs being on foot would sometimes moan with fatigue, and pray for rest, but I was anxious to enable them to perform their contract for bringing me to Cairo within the stipulated time, and I did not therefore allow a halt until the evening came. About mid-day, or soon after, Mysseri used

to bring his camel alongside of mine and supply me with a piece of the dried bread softened in water, and also (so long as it lasted) with a piece of the tongue. After this there came into my hand (how well I remember it!) the little tin cup half filled with wine and water.

As long as you are journeying in the interior of the Desert you have no particular point to make for as your resting-place. The endless sands yield nothing but small stunted shrubs; even these fail after the first two or three days, and from that time you pass over broad plains—you pass over newly-reared hills—you pass through valleys dug out by the last week's storm,—and the hills and the valleys are sand, sand, sand, still sand, and only sand, and sand, and sand again. The earth is so samely that your eyes turn towards heaven—towards heaven, I mean, in a sense of sky. You look to the sun, for he is your task-master, and by him you know the measure of the work that you have done, and the measure of the work that remains for you to do. He comes when you strike your tent in the early morning, and then, for the first hour of the day, as you move forward on your camel, he stands at your near side, and makes you know that the whole day's toil is before you; then for a while, and a long while, you see him no more, for you are veiled and shrouded, and dare not look upon the greatness of his glory, but you know where he

strides overhead by the touch of his flaming sword. No words are spoken, but your Arabs moan, your camels sigh, your skin glows, your shoulders ache, and for sights you see the pattern and the web of the silk that veils your eyes, and the glare of the outer light. Time labours on—your skin glows, your shoulders ache, your Arabs moan, your camels sigh, and you see the same pattern in the silk, and the same glare of light beyond; but conquering time marches on, and by-and-by the descending sun has compassed the heaven and now softly touches your right arm, and throws your lank shadow over the sand right along on the way for Persia. Then again you look upon his face, for his power is all veiled in his beauty, and the redness of flames has become the redness of roses; the fair, wavy cloud that fled in the morning now comes to his sight once more—comes blushing, yet still comes on—comes burning with blushes, yet comes and clings to his side.

Then begins your season of rest. The world about you is all your own, and there, where you will, you pitch your solitary tent; there is no living thing to dispute your choice. When at last the spot has been fixed upon and we come to a halt, one of the Arabs would touch the chest of my camel, and utter at the same time a peculiar gurgling sound. The beast instantly understood and obeyed the sign, and slowly sank

under me, till she brought her body to a level with the ground: then gladly enough I alighted. The rest of the camels were unloaded and turned loose to browse upon the shrubs of the Desert, where shrubs there were; or where these failed, to wait for the small quantity of food that was allowed them out of our stores.

My servants, helped by the Arabs, busied themselves in pitching the tent and kindling the fire. Whilst this was doing, I used to walk away towards the East, confiding in the print of my foot as a guide for my return. Apart from the cheering voices of my attendants I could better know and feel the loneliness of the Desert. The influence of such scenes, however, was not of a softening kind, but filled me rather with a sort of childish exultation in the self-sufficiency which enabled me to stand thus alone in the wideness of Asia—a short-lived pride, for wherever man wanders, he still remains tethered by the chain that links him to his kind; and so when the night closed round me, I began to return—to return, as it were, to my own gate. Reaching at last some high ground, I could see, and see with delight, the fire of our small encampment; and when, at last, I regained the spot, it seemed a very home that had sprung up for me in the midst of these solitudes. My Arabs were busy with their bread—Mysseri rattling tea-cups—the little kettle with her odd, old-maidish looks, sat humming away

old songs about England; and two or three yards from the fire my tent stood prim and tight with open portal, and with welcoming look—a look like “the own arm-chair” of our lyrist’s “sweet Lady Anne.”

Sometimes in the earlier part of my journey the night-breeze blew coldly; when that happened the dry sand was heaped up outside round the skirts of the tent, and so the wind, that everywhere else could sweep as he listed along those dreary plains, was forced to turn aside in his course, and make way, as he ought, for the Englishman. Then within my tent there were heaps of luxuries—dining-rooms, dressing-rooms, libraries, bedrooms, drawing-rooms, oratories—all crowded into the space of a hearth-rug. The first night, I remember, with my books and maps about me, I wanted a light. They brought me a taper, and immediately from out of the silent Desert there rushed in a flood of life unseen before. Monsters of moths of all shapes and hues that never before perhaps had looked upon the shining of a flame now madly thronged into my tent, and dashed through the fire of the candle till they fairly extinguished it with their burning limbs. Those who had failed in attaining this martyrdom suddenly became serious, and clung despondingly to the canvas.

By-and-by there was brought to me the fragrant tea and big masses of scorched and scorching

toast, and the butter that had come all the way to me in this Desert of Asia, from out of that poor, dear, starving Ireland. I feasted like a king—like four kings—like a boy in the fourth form.

When the cold, sullen morning dawned, and my people began to load the camels, I always felt loath* to give back to the waste this little spot of ground that had glowed for a while with the cheerfulness* of a human dwelling. One by one the cloaks, the saddles, the baggage, the hundred things that strewed the ground and made it look so familiar—all these were taken away, and laid upon the camels. A speck in the broad tracts of Asia remained still impressed with the mark of patent portmanteaus and the heels of London boots; the embers of the fire lay black and cold upon the sand; and these were the signs we left.

My tent was spared to the last, but when all else was ready for the start, then came its fall; the pegs were drawn, the canvas shivered, and in less than a minute there was nothing that remained of my genial home but only a pole and a bundle. The encroaching Englishman was off, and instant upon the fall of the canvas, like an owner who had waited and watched, the Genius of the Desert stalked in.

To servants, as I suppose to any other Europeans not much accustomed to amuse themselves by fancy or memory, it often happens that, after

a few days' journeying, the loneliness of the Desert will become frightfully oppressive. Upon my poor fellows the access of melancholy came heavy, and all at once, as a blow from above; they bent their necks, and bore it as best they could; but their joy was great on the fifth day, when we came to an oasis called Gatieh, for here we found encamped a caravan (that is an assemblage of travellers) from C  iro. The orientals living in cities never pass the Desert except in this way. Many will wait for weeks, and even for months, until a sufficient number of persons can be found ready to undertake the journey at the same time—until the flock of sheep is big enough to fancy itself a match for wolves. They could not, I think, really secure themselves against any serious danger by this contrivance; for though they have arms, they are so little accustomed to use them, and so utterly unorganized, that they never could make good their resistance to robbers of the slightest respectability. It is not of the Bedouins that such travellers are afraid, for the safe-conduct granted by the chief of the ruling tribe is never, I believe, violated; but it is said that there are deserters and scamps of various sorts who hover about the skirts of the Desert, particularly on the Cairo side, and are anxious to succeed to the property of any poor devils whom they may find more weak and defenceless than themselves.

These people from Cairo professed to be amazed at the ludicrous disproportion between their numerical forces and mine. They could not understand, and they wanted to know, by what strange privilege it is that an Englishman with a brace of pistols and a couple of servants rides safely across the Desert, whilst they, the natives of the neighbouring cities, are forced to travel in troops, or rather in herds. One of them got a few minutes of private conversation with Dthemeti, and ventured to ask him anxiously whether the English did not travel under the protection of evil demons. I had previously known (from Methley, I think, who had travelled in Persia) that this notion, so conducive to the safety of our countrymen, is generally prevalent amongst orientals. It owes its origin partly to the strong wilfulness of the English gentleman (a quality which, not being backed by any visible authority, either civil or military, seems perfectly superhuman to the soft Asiatic), but partly, too, to the magic of the banking system, by force of which the wealthy traveller will make all his journeys without carrying a handful of coin, and yet, when he arrives at a city, will rain down showers of gold. The theory is that the English traveller has committed some sin against God and his conscience, and that for this the evil spirit has hold of him, and drives him from his home like a victim of the old Grecian furies, and forces

him to travel over countries far and strange, and most chiefly over deserts and desolate places, and to stand upon the sites of cities that once were, and are now no more, and to grope among the tombs of dead men. Often enough there is something of truth in this notion; often enough the wandering Englishman is guilty (if guilt it be) of some pride or ambition, big or small, imperial or parochial, which being offended has made the lone places more tolerable than ball-rooms to him a sinner.

I can understand the sort of amazement of the orientals at the scantiness of the retinue with which an Englishman passes the Desert, for I was somewhat struck myself when I saw one of my countrymen making his way across the wilderness in this simple style. At first there was a mere moving speck in the horizon; my party of course became all alive with excitement, and there were many surmises. Soon it appeared that three laden camels were approaching, and that two of them carried riders. In a little while we saw that one of the riders wore the European dress, and at last the travellers were pronounced to be an English gentleman and his servant; by their side there were a couple of Arabs on foot; and this, if I rightly remember, was the whole party.

You—you love sailing—in return from a cruise to the English coast you see often enough a fisherman's humble boat far away from all shores,

with an ugly black sky above, and an angry sea beneath; you watch the grisly old man at the helm carrying his craft with strange skill through the turmoil of waters, and the boy, supple-limbed, yet weather-worn already, and with steady eyes that look through the blast; you see him understanding commandments from the jerk of his father's white eyebrow—now belaying, and now letting go—now scrunching himself down into mere ballast, or baling out death with a pipkin. Familiar enough is the sight, and yet when I see it I always stare anew, and with a kind of Titanic exultation, because that a poor boat with the brain of a man and the hands of a boy on board, can match herself so bravely against black heaven and ocean. Well, so when you have travelled for days and days over an Eastern desert without meeting the likeness of a human being, and then at last see an English shooting-jacket and a single servant come listlessly slouching along from out of the forward horizon, you stare at the wide unproportion between this slender company and the boundless plains of sand through which they are keeping their way.

This Englishman, as I afterwards found, was a military man returning to his country from India, and crossing the Desert at this part in order to go through Palestine. As for me, I had come pretty straight from England, and so here we met in the wilderness at about half-way from

our respective starting-points. As we approached each other, it became with me a question whether we should speak. I thought it likely that the stranger would accost me, and in the event of his doing so, I was quite ready to be as sociable and chatty as I could be according to my nature; but still I could not think of anything particular that I had to say to him. Of course, among civilized people the not having anything to say is no excuse at all for not speaking; but I was shy and indolent, and I felt no great wish to stop and talk like a morning visitor in the midst of those broad solitudes. The traveller perhaps felt as I did, for, except that we lifted our hands to our caps and waved our arms in courtesy, we passed each other quite as distantly as if we had passed in Pall Mall. Our attendants, however, were not to be cheated of the delight that they felt in speaking to new listeners and hearing fresh voices once more. The masters, therefore, had no sooner passed each other, than their respective servants quietly stopped and entered into conversation. As soon as my camel found that her companions were not following her, she caught the social feeling and refused to go on. I felt the absurdity of the situation, and determined to accost the stranger, if only to avoid the awkwardness of remaining stuck fast in the Desert whilst our servants were amusing themselves. When with this intent I turned round my camel, I found

that the gallant officer had passed me by about thirty or forty yards, and was exactly in the same predicament as myself. I put my now willing camel in motion and rode up towards the stranger: seeing this he followed my example, and came forward to meet me. He was the first to speak. Too courteous to address me, as if he admitted the possibility of my wishing to accost him from any feeling of mere sociability or civilian-like love of vain talk, he at once attributed my advances to a laudable wish of acquiring statistical information; and accordingly, when we got within speaking distance, he said, "I daresay you wish to know how the plague is going on at Cairo?" and then he went on to say he regretted that his information did not enable him to give me in numbers, a perfectly accurate statement of the daily deaths. He afterwards talked pleasantly enough upon other and less ghastly subjects. I thought him manly and intelligent—a worthy one of the few thousand strong Englishmen to whom the empire of India is committed.

The night after the meeting with the people of the caravan, Dthemetri, alarmed by their warnings, took upon himself to keep watch all night in the tent: no robbers came, except a jackal that poked his nose into my tent from some motive of rational curiosity. Dthemetri did not shoot him for fear of waking me. These brutes swarm in every part of Syria; and there were

many of them even in the midst of those void sands which would seem to give such poor promise of food. I can hardly tell what prey they could be hoping for, unless it were that they might find now and then the carcass of some camel that had died on the journey. They do not marshal themselves into great packs like the wild dogs of Eastern cities, but follow their prey in families like the place-hunters of Europe. Their voices are frightfully like to the shouts and cries of human beings: if you lie awake in your tent at night, you are almost continually hearing some hungry family as it sweeps along in full cry; you hear the exulting scream with which the sagacious dam first winds the carrion, and the shrill response of the unanimous cubs as they sniff the tainted air—"Wha! wha!—wha! wha!—wha! wha!—whose gift is it in, mamma?"

Once during this passage my Arabs lost their way among the hills of loose sand that surrounded us, but after a while we were lucky enough to recover our right line of march. The same day we fell in with a sheik, the head of a family that actually dwells at no great distance from this part of the Desert during nine months of the year. The man carried a matchlock, and of this he was inordinately proud, on account of the supposed novelty and ingenuity of the contrivance. We stopped, and sat down and rested awhile for the sake of a little talk. There was much that I

should have liked to ask this man, but he could not understand Dthemetri's language, and the process of getting at his knowledge by double interpretation through my Arabs was tedious. I discovered, however (and my Arabs knew of that fact), that this man and his family lived habitually for nine months of the year without touching or seeing either bread or water. The stunted shrubs growing at intervals through the sand in this part of the Desert enable the camel mares to yield a little milk, and this furnishes the sole food and drink of their owner and his people. During the other three months (the hottest, I suppose) even this resource fails, and then the sheik and his people are forced to pass into another district. You would ask me why the man should not remain always in that district which supplies him with water during three months of the year, but I don't know enough of Arab politics to answer the question. The sheik was not a good specimen of the effect produced by his way of living: he was very small, very spare, and sadly shrivelled—a poor over-roasted snipe—a mere cinder of a man. I made him sit down by my side, and gave him a piece of bread and a cup of water from out of my goatskins. This was not very tempting drink to look at, for it had become turbid and was deeply reddened by some colouring matter contained in the skins, but it kept its sweetness, and tasted like a strong

decoction of Russian leather. The sheik sipped this drop by drop with ineffable relish, and rolled his eyes solemnly round between every draught, as though the drink were the drink of the Prophet, and had come from the seventh heaven.

An inquiry about distances led to the discovery that this sheik had never heard of the division of time into hours.

About this part of my journey I saw the likeness of a fresh-water lake. I saw, as it seemed, a broad sheet of calm water stretching far and fair towards the south—stretching deep into winding creeks, and hemmed in by jutting promontories, and shelving smooth off towards the shallow side: on its bosom the reflected fire of the sun lay playing and seeming to float as though upon deep still waters.

Though I knew of the cheat, it was not till the spongy foot of my camel had almost trodden in the seeming lake that I could undeceive my eyes, for the shore-line was quite true and natural. I soon saw the cause of the phantasm. A sheet of water, heavily impregnated with salts, had gathered together in a vast hollow between the sand-hills, and when dried up by evaporation had left a white saline deposit; this exactly marked the space which the waters had covered, and so traced out a good shore-line. The minute crystals of the salt, by their way of sparkling in the sun,

were made to seem like the dazzled face of a lake that is calm and smooth.

The pace of the camel is irksome, and makes your shoulders and loins ache from the peculiar way in which you are obliged to suit yourself to the movements of the beast; but one soon, of course, becomes inured to the work, and after my first two days this way of travelling became so familiar to me that (poor sleeper as I am) I now and then slumbered for some moments together on the back of my camel. On the fifth day of my journey the air above lay dead, and all the whole earth that I could reach with my utmost sight and keenest listening was still and lifeless, as some dispeopled and forgotten world that rolls round and round in the heavens through wasted floods of light. The sun, growing fiercer and fiercer, shone down more mightily now than ever on me he shone before, and as I drooped my head under his fire, and closed my eyes against the glare that surrounded me, I slowly fell asleep—for how many minutes or moments I cannot tell; but after a while I was gently awakened by a peal of church bells—my native bells—the innocent bells of Marlen, that never before sent forth their music beyond the Blaygon hills! My first idea naturally was that I still remained fast under the power of a dream. I roused myself, and drew aside the silk that covered my eyes,

and plunged my bare face into the light. Then at least I was well enough awakened ; but still those old Marlen bells rang on, not ringing for joy, but properly, prosily, steadily, merrily ringing "for church." After a while the sound died away slowly. It happened that neither I nor any of my party had a watch by which to measure the exact time of its lasting, but it seemed to me that about ten minutes had passed before the bells ceased. I attributed the effect to the great heat of the sun, the perfect dryness of the clear air through which I moved, and the deep stillness of all around me. It seemed to me that these causes, by occasioning a great tension, and consequent susceptibility of the hearing organs, had rendered them liable to tingle under the passing touch of some mere memory that must have swept across my brain in a moment of sleep. Since my return to England it has been told me that like sounds have been heard at sea, and that the sailor, becalmed under a vertical sun in the midst of the wide ocean, has listened in trembling wonder to the chime of his own village bells.

During my travels I kept a journal—a journal sadly meagre and intermittent, but one which enabled me to find out the day of the month and the week according to the European calendar; referring to this, I found that the day was Sunday, and roughly allowing for the difference of longitude, I concluded that at the moment of my

hearing that strange peal, the church-going bells of Marlen must have been actually calling the prim congregation of the parish to morning prayer. The coincidence amused me faintly, but I could not allow myself a hope that the effect I had experienced was anything older than an illusion—an illusion liable to be explained (as every illusion is in these days) by some of the philosophers who guess at Nature's riddles. It would have been sweeter to believe that my kneeling mother, by some pious enchantment, had asked and found this spell to rouse me from my scandalous forgetfulness of God's holy day—but my fancy was too weak to carry a faith like that. Indeed the vale through which the bells of Marlen send their song is a highly respectable vale, and its people (save one, two or three) are wholly unaddicted to the practice of magical arts.

After the fifth day of my journey I no longer travelled over shifting hills, but came upon a dead level—a dead level bed of sand, quite hard, and studded with small shining pebbles.

The heat grew fierce; there was no valley nor hollow, no hill, no mound, no shadow of hill nor of mound, by which I could mark the way I was making. Hour by hour I advanced, and saw no change—I was still the very centre of a round horizon; hour by hour I advanced, and still there was the same, and the same, and the same—

the same circle of flaming sky—the same circle of sand still glaring with light and fire. Over all the heaven above, over all the earth beneath, there was no visible power that could balk the fierce will of the sun; “he rejoiced as a strong man to run a race; his going forth was from the end of the heaven, and his circuit unto the ends of it: and there was nothing hid from the heat thereof.” From pole to pole, and from the east to the west, he brandished his fiery sceptre as though he had usurped all heaven and earth. As he bid the soft Persian in ancient times, so now, and fiercely too, he bid me bow down and worship him; so now in his pride he seemed to command me, and say, “Thou shalt have none other gods but me.” I was alone before him. There were these two pitted together, and face to face; the mighty sun for one—and for the other, this poor, pale, solitary self of mine that I always carry about with me.

But on the eighth day, and before I had yet turned away from Jehovah for the glittering god of the Persians, there appeared a dark line upon the edge of the forward horizon, and soon the line deepened into a delicate fringe that sparkled here and there as though it were sown with diamonds. There then before me were the gardens and the minarets of Egypt, and the mighty works of the Nile, and I (the eternal Ego that I am!)—I had lived to see, and I saw them.

When evening came I was still within the confines of the Desert, and my tent was pitched as usual, but one of my Arabs stalked away rapidly towards the west without telling me of the errand on which he was bent. After a while he returned: he had toiled on a graceful service; he had travelled all the way on to the border of the living world, and brought me back for a token an ear of rice, full, fresh, and green.

The next day I entered upon Egypt, and floated along (for the delight was as the delight of bathing) through green wavy fields of rice, and pastures fresh and plentiful, and dived into the cold verdure of groves and gardens, and quenched my hot eyes in shade, as though in a bed of deep waters.

ALEXANDER WILLIAM KINGLAKE.

PLACES OF RETIREMENT *

"Good God! how sweet are all things here!
How beautiful the fields appear!
How cleanly do we feed and lie!
Lord! what good hours do we keep!
How quietly we sleep!"

CHARLES COTTON (a friend of
Izaak Walton)

April 29th.

I HAVE been spending a Sunday of retirement in the woods. I came out with a strange, deep sense of depression, and though I knew it was myself and not the world that was sad, yet I could not put it away from me. . . . As I write, the wood seems full of voices, the little rustling of leaves, the minute sounds of twigs chafing together, the cry of frogs from the swamp so steady and monotonous that it scarcely arrests attention. Of odours, a-plenty! Just behind me, so that by turning my head I can see into their cool green depths, are a number of hemlock trees, the breath of which is incalculably sweet. All the

* From "Great Possessions" by permission of the author.

earth—the very earth itself—has a good rich growing odour, pleasant to smell.

These things have been here a thousand years—a million years—and yet they are not stale, but are ever fresh, ever serene, ever here to loosen one's crabbed spirit and make one quietly happy. It seems to me I could not live if it were not possible often to come thus alone to the woods.

. . . On later walking I discover that here and there on warm southern slopes the dog-tooth violet is really in bloom, and worlds of hepatica, both lavender and white, among the brown leaves. One of the notable sights of the hillsides at this time of the year is the striped maple, the long wands rising straight and chaste among thickets of less-striking young birches and chestnuts, and having a bud of a delicate pink—a marvel of minute beauty. A little trailing arbutus I found and renewed my joy with one of the most exquisite odours of all the spring; Solomon's seal thrusting up vivid green cornucopias from the lifeless earth, and often near a root or stone the red partridge berries among their bright leaves. The laurel on the hills is sharply visible, especially when among deciduous trees, and along the old brown roads are patches of fresh winter-green. In a cleft of the hills near the top of Norwottuck, though the day is warm, I found a huge snowbank—the last held trench of old winter, the last guerilla of the cold, driven to the

fastnesses of the hills. . . . I have enjoyed this day without trying. After the first hour or so of it all the worries dropped away, all the ambitions, all the twisted thoughts—

It is strange how much thrilling joy there is in the discovery of the ages-old miracle of returning life in the woods: each green adventurer, each fragrant joy, each bird-call—and the feel of the soft, warm sunshine upon one's back after months of winter. On any terms life is good. The only woe, the only Great Woe, is the woe of never having been born. Sorrow, yes; failure, yes; weakness, yes; the sad loss of dear friends—yes! But oh, the good God: I still live!

Being alone without feeling alone is one of the great experiences of life, and he who practises it has acquired an infinitely valuable possession. People fly to crowds for happiness, not knowing that all the happiness they find there they must take with them. Thus they divert and distract that within them which creates power and joy, until by flying always away from themselves, seeking satisfaction from without rather than from within, they become infinitely boresome to themselves, so that they can scarcely bear a moment of their own society.

But if once a man have a taste of true and happy retirement, though it be but a short hour, or day, now and then, he has found, or is beginning to find, a sure place of refuge, of blessed

renewal, toward which in the busiest hours he will find his thoughts wistfully stealing. How stoutly will he meet the buffets of the world if he knows he has such a place of retirement where all is well-ordered and full of beauty, and right counsels prevail, and true things are noted.

As a man grows older, if he cultivate the art of retirement, not indeed as an end in itself, but as a means of developing a richer and freer life, he will find his reward growing surer and greater until in time none of the storms or shocks of life any longer disturbs him. He might in time even reach the height attained by Diogenes, of whom Epictetus said, "It was not possible for any man to approach him, nor had any man the means of laying hold upon him to enslave him. He had everything easily loosed, everything only hanging to him. If you laid hold of his property, he would rather have let it go and be yours than he would have followed you for it; if you laid hold of his leg he would have let go his leg: if all of his body, all his poor body; his intimates, friends, country, just the same. For he knew from whence he had them, and from whom and on what conditions."

The best partners of solitude are books. I like to take a book with me in my pocket, although I find the world so full of interesting things—sights, sounds, odours—that often I never read a word in it. It is like having a valued friend with

you, though you walk for miles without saying a word to him or he to you: but if you really know your friend, it is a curious thing how, subconsciously, you are aware of what he is thinking and feeling about this hillside or that distant view. And so it is with books. It is enough to have this writer in your pocket, for the very thought of him and what he would say to these old fields and pleasant trees is ever freshly delightful. And he never interrupts at inconvenient moments, nor intrudes his thoughts upon yours unless you desire it.

I do not want long books and least of all story books in the woods—these are for the library—but rather scraps and extracts and condensations from which thoughts can be plucked like flowers and carried for a while in the buttonhole. So it is that I am fond of all kinds of anthologies. I have one entitled “Traveller’s Joy,” another, “Songs of Nature,” and I have lately found the best one I know called “The Spirit of Man” by Robert Bridges, the English laureate. Other little books that fit well in the pocket on a tramp, because they are truly companionable, are Ben Jonson’s “Timber,” one of the very best, and William Penn’s “Fruits of Solitude.” An anthology of Elizabethan verse, given me by a friend, is also a good companion.

It is not a discourse or a narrative we want as we walk abroad, but conversation. Neither

do we want people or facts or stories, but a person. So I open one of these little books and read therein the thoughtful remark of a wise companion. This I may reply to, or merely enjoy, as I please. I am in no hurry, as I might be with a living companion, for my book friend, being long dead, is not impatient and gives me time to reply, and is not resentful if I make no reply at all. Submitted to such a test as this few writers, old or new, give continued profit or delight. To be considered in the presence of the great and simple things of nature, or worn long in the warm places of the spirit, a writer must have supreme qualities of sense or humour, a great sensitiveness to beauty, or a genuine love of goodness—but above all he must somehow give us the flavour of personality. He must be a true companion of the spirit.

There is an exercise given to young soldiers which consists in raising the hands slowly above the head, taking in a full breath at the same time, and then letting them down in such a way as to square the shoulders. This leaves the body erect, the head high, the eyes straight ahead, the lungs full of good air. It is the attitude that every man at arms should wish to take. After a day in the woods I feel some such erectness of spirit, a lift of the head, and a clearer and calmer vision, for I have raised up my hands to the heavens,

and drawn in the odours and sights and sounds of the good earth.

One of the great joys of such times of retirement—perhaps the greatest of the joys—is the return, freshened and sweetened, to the common life. How good then appear the things of the garden and farm, the house and shop, that weariness had staled; how good the faces of friends.

DAVID GRAYSON.

PREFACE TO A SENTIMENTAL JOURNEY

IT must have been observed by many a peripatetic philosopher, That nature has set up by her own unquestionable authority certain boundaries and fences to circumscribe the discontent of man: she has effected her purpose in the quietest and easiest manner, by laying him under almost insuperable obligations to work out his ease, and to sustain his suffering at home. It is there only that she has provided him with the most suitable objects to partake of his happiness, and bear a part of that burthen, which, in all countries and ages, has ever been too heavy for one pair of shoulders. 'Tis true, we are endued with an imperfect power of spreading our happiness sometimes beyond *her* limits, but 'tis so ordered, that, from the want of 'languages, connexions, and dependencies, and from the difference in educations, customs, and habits, we lie under so many impediments in communicating our sensations out of our own sphere, as often amount to a total impossibility.

It will always follow from hence, that the balance of sentimental commerce is always against

the expatriated adventurer: he must buy what he has little occasion for, at their own price—his conversation will seldom be taken in exchange for theirs without a large discount—and this, by the bye, eternally driving him into the hands of more equitable brokers, for such conversation as he can find, it requires no great spirit of divination to guess at his party—

This brings me to my point; and naturally leads me (if the see-saw of this *Desobligeant* will but let me get on) into the efficient as well as final causes of travelling—

Your idle people that leave their native country, and go abroad for some reason or reasons which may be derived from one of these general causes—

Infirmity of body,

Imbecility of the mind, or

Inevitable necessity.

The two first include all those who travel by land or by water, labouring with pride, curiosity, vanity, or spleen, subdivided and combined *in infinitum*.

The third class includes the whole army of peregrine martyrs; more especially those travelers who set out upon their travels with the benefit of the clergy, either as delinquents traveling under the direction of governors recommended by the magistrate—or young gentlemen transported by the cruelty of parents and guard-

ians, and travelling under the direction of governors recommended by Oxford, Aberdeen, and Glasgow.

There is a fourth class, but their number is so small that they would not deserve a distinction, was it not necessary in a work of this nature to observe the greatest precision and nicety, to avoid a confusion of character. And these men I speak of, are such as cross the seas and sojourn in a land of strangers, with a view of saving money for various reasons and upon various pretences: but as they might also save themselves and others a great deal of unnecessary trouble by saving their money at home—and as their reasons for travelling are the least complex of any other species of emigrants, I shall distinguish these gentlemen by the name of

SIMPLE TRAVELLERS

Thus the whole circle of travellers may be reduced to the following *heads*:

Idle Travellers,
Inquisitive Travellers,
Lying Travellers,
Proud Travellers,
Vain Travellers,
Splenetic Travellers,

Then follow

The Travellers of Necessity,
The delinquent and felonious Traveller,

The unfortunate and innocent Traveller,
The simple Traveller,

And last of all (if you please) the Sentimental Traveller (meaning thereby myself), who have travell'd, and of which I am now sitting down to give an account—as much out of *Necessity*, and the *besoin de Voyager*, as anyone in the class.

I am well aware, at the same time, as both my travels and observations will be altogether of a different cast from any of my fore-runners; that I might have insisted upon a whole nitch entirely to myself—but I should break in upon the confines of the *Vain* Traveller, in wishing to draw attention toward me, till I have some better grounds for it, than the mere *Novelty of my Vehicle*. It is sufficient for my reader, if he has been a Traveller himself, that with study and reflection hereupon he may be able to determine his own place and rank in the catalogue—it will be one step towards knowing himself, as it is great odds but he retains some tincture and resemblance of what he imbibed or carried out, to the present hour.

The man who first transplanted the grape of Burgundy to the Cape of Good Hope (observe he was a Dutchman) never dreamt of drinking the same wine at the Cape, that the same grape produced upon the French mountains—he was too phlegmatic for that—but undoubtedly he ex-

pected to drink some sort of vinous liquor; but whether good, bad, or indifferent—he knew enough of this world to know, that it did not depend upon his choice, but that what is generally called *chance* was to decide his success: however, he hoped for the best: and in these hopes, by an intemperate confidence in the fortitude, of his head and the depth of his discretion, *Mynheer* might possibly overset both in his new vineyard: and by discovering his nakedness, become a laughing-stock to his people.

Even so it fares with the poor Traveller, sailing and posting through the politer kingdoms of the globe, in pursuit of knowledge and improvements.

Knowledge and improvements are to be got by sailing and posting for that purpose; but whether useful knowledge and real improvements, is all a lottery—and even where the adventurer is successful, the acquired stock must be used with caution and sobriety, to turn to any profit—but as the chances run prodigiously the other way, both as to the acquisition and application, I am of opinion, that a man would act as wisely, if he could prevail upon himself to live contented without foreign knowledge or foreign improvements, especially if he lives in a country that has no absolute want of either—and indeed, much grief of heart has it oft and many a time cost me, when I have observed how many a foul step the

inquisitive Traveller has measured to see sights and look into discoveries; all which, as Sancho Panza said to Don Quixote, they might have seen dry-shod at home. It is an age so full of light, that there is scarce a country or corner of Europe, whose beams are not crossed and interchanged with others—Knowledge in most of its branches, and in most affairs, is like music in an Italian street, whereof those may partake, who pay nothing—But there is no nation under heaven—and God is my record (before whose tribunal I must one day come and give an account of this work) that I do not speak it vauntingly—But there is no nation under heaven abounding with more variety of learning—where the sciences may be more fitly woo'd, or more surely won, than here—where art is encouraged, and will soon rise high—where Nature (take her altogether) has so little to answer for—and, to close all, where there is more wit and variety of character to feed the mind with—Where then, my dear countrymen, are you going—

—We are only looking at this chaise, said they—Your most obedient servant, said I, skipping out of it, and pulling off my hat—We were wondering, said one of them, who, I found, was an *inquisitive Traveller*,—what could occasion its motion.—'T was the agitation, said I coolly, of writing a preface.—I never heard, said the other, who was a *simple Traveller*, of a preface wrote

a *Desobligeant*.—It would have been better, d I, in a *Vis à Vis*.

As an Englishman does not travel to see Eng-
hmen, I retired to my room.

LAURENCE STERNE.

IN ITALICS*

I SHALL make a botch of what I'm about to say, because I fear the vibration that is in my mind is not quite conveyable. But anyhow, the rain sopping on the little balcony outside my window, and the look-off over Manhattan's cliffs, and the card here beside me, all make the attempt irresistible.

I have just discovered Italy. I know that in the eyes of cultivated readers I am going to be ridiculous; but that doesn't matter. I'll be honest with you. Since a certain rainy day in the summer of 1912—a day when it rained just as it is raining now, and I sat in a hotel in Basel and decided it was too wet to bicycle over the Alps—I had said to myself (subconsciously, not aloud, where I could be overheard) that I could get along without Italy. I said to myself that there were already too many things in the world to be thought about, and that I'd have to sacrifice some of them. I had America to think about, and England, and Germany, and France; and then, later on, getting married and earning a living

* From "The Romany Stain" by permission of the author.

and raising a family; and I fell in love with Manhattan, and (in a kind of shamefaced way) I said to myself that the new Cunard Building was probably a perfectly adequate substitute for Italy. . . .

And then to-day, coming into the office quite unsuspecting any staggering blow, there was that postcard on A. L.'s desk.

It's no use trying to describe that card to you, though I'll tell you enough so that you can identify it. Underneath the picture is written FIRENZE, Cappella Riccardi—Viaggio dei Magi—Un Cavaliere—Dettagli—Benozzo Gozzoli. The picture is of a young fellow in a white embroidered cloak, with a crown and long curly hair, riding on a white horse. He is accompanied by spearman. In the background is a very consciously sculpturesque rocky hillside, a man galloping on horseback with lifted spear, and a couple of those very capersome greyhounds loved by Renaissance artists. These are pursuing the hindquarters of a flitting quadruped who has very nearly escaped, for his front half has got right off the postcard. If the man on horseback doesn't hurl his spear quickly the venison will get away. The white horse on which the protagonist is riding is (as they say in art catalogues) richly caparisoned; he is lifting his right front knee with the jolliest enthusiasm and pride; under his belly is visible another dog, of a quite mongrelish sort, who

(this is only our guess) has attached himself to the procession on his own hook and is enjoying himself greatly. The pricker of the rider's spur comes just over our mongrel's head and looks like a star honouring him.

Now this, I am painfully aware, gives no impression at all of the picture. And indeed, if the loveliness of the scene were transmissible in words, why should Benozzo Gozzoli have painted it? I only mention these details in order to enable connoisseurs of these matters to identify the thing and give them the pleasure of smiling at my simplicity. A. L., I learned, keeps this card on her desk to remind her that "beyond the Alps lies Italy." And I have borrowed it from her for a day or so until I can find some art dealer who can sell me a small photo of the thing.

For if this is what Italy means, I said to myself as I went through the curious adventures of a rainy day among those downtown cliffs—which included lunching with a pensive mandarin beside a window on the thirty-eighth floor and looking off at pyramids and pinnacles whorled in sifting mist and rain while we plotted a little innocent sorcery together—if this is what Italy means, it is high time that (in the charming phrase of the land) I "met up" with her. Of course it is true that I had once before, lunching aboard the steamship *Giulio Cesare*, and tasting

asti spumante, had a vague suspicion that Italy and I would get on well together. But, remembering my disappointment on that wet day in Basel, I had always said sternly, No, I can get along without her. Well, a wet day divided us; now a wet day has brought us together again. Then (how divine is chance!) in came Hugh Western, the Chicago sonneteer. Hugh is a student of Italian art; I broached my naïf excitement to him and showed him the postal card. When he saw it, a flash—like a flicker of spiritual lightning—went over his serene, well-bred features. That was enough. Gozzoli, evidently, was an old friend of his. And if Gozzoli could kindle that look of understanding on the face of a Chicago sonneteer, then, by heaven, Gozzoli is the man for me. Look here, I said to A. L., I'm going to write a letter to this fellow Gozzoli. She didn't quite perceive, and began to explain that Gozzoli . . . Never mind, I said, I'm going to write him a letter. And one of these days I shall.

The youth, the glamour, the enchantment, the shining witness of life as it needs must be lived, emanate from that painting so strongly as to change and fortify the whole current of a man's day. That white horse with its gallant rider—one of the Medicis, A. L. told me—moved invisibly before me all day. I trod in his company. I was the yellow dog that joined the parade;

there I was, under his horse's belly, but the star-point of his spur glistened over my humble head. And even here in this cruel and magnificent city, I said to myself, life can yet be made noble and proud by art. A. L. begged me to get hold of some books and read up about the Medicis and Gozzoli; but I don't believe I want to. I prefer to imagine them, until I can lay eye upon the painting itself. A mural, she said. One of those things they paint on walls, I suppose, to prove that there are no walls.

I wish Benozzo Gozzoli could have seen the view I see now as I am typing this. The thousand golden panes of the Hudson Terminal, the Tel and Tel, and the lesser buildings between, shining through the dusk and wet; the dark little chapel and graveyard below; the winged statue dim against the heavy grey sky. Bless him, the man who did that horse's mild proud eye and curly nostril, the petulant, snobbish, and yet almost girlishly lovely face of young De Medici, Esq., the man who knew how to give those spears just the right angle of slant and the mongrel dog exactly his correct simper of idiotic fool satisfaction—that man would have known what to do about Downtown Manhattan at night. For what are we to do about it? How are we, in this burning and maddening civilization, to recapture that almost insolent glory of artistic fecundity? How shall we “like pelicans

from sore-tweaked bosoms feather a nest for some
great egg of song”?

That evening I broke the law.

CHRISTOPHER MORLEY.

WALKING TOURS

IT must not be imagined that a walking tour, as some would have us fancy, is merely a better or worse way of seeing the country. There are many ways of seeing landscape quite as good; and none more vivid, in spite of canting diletantes, than from a railway train. But landscape on a walking tour is quite accessory. He who is indeed of the brotherhood does not voyage in quest of the picturesque, but of certain jolly humours—of the hope and spirit with which the march begins at morning, and the peace and spiritual repletion of the evening's rest. He cannot tell whether he puts his knapsack on, or takes it off, with more delight. The excitement of the departure puts him in key for that of the arrival. Whatever he does is not only a reward in itself, but will be further rewarded in the sequel; and so pleasure leads on to pleasure in an endless chain. It is this that so few can understand; they will either be always lounging or always at five miles an hour; they do not play off the one against the other, prepare all day for the evening, and all evening for the next

lay. And, above all, it is here that your over-walker fails of comprehension. His heart rises against those who drink their curacao in liqueur-glasses, when he himself can swill it in a brown john. He will not believe that the flavour is more delicate in the smaller dose. He will not believe that to walk this unconscionable distance is merely to stupefy and brutalize himself, and come to his inn, at night, with a starless night of darkness in his spirit. Not for him the mild luminous evening of the temperate walker! He has nothing left of man but a physical need for bedtime and a double nightcap; and even his pipe, if he be a smoker, will be savourless and disenchanted. It is the fate of such an one to take twice as much trouble as is needed to obtain happiness, and miss the happiness in the end; he is the man of the proverb, in short, who goes further and fares wor -

Now, to be properly enjoyed, a walking tour should be gone upon alone. If you go in company, or even in pairs, it is no longer a walking tour in anything but name; it is something else and more in the nature of a picnic. A walking tour should be gone upon alone, because you should be able to stop and go on, and follow this way or that, as the freak takes you; and because you must have your own pace, and neither trot alongside a champion walker, nor mince in time with a girl. And then you must be open to all

impressions and let your thoughts take colour from what you see. You should be as a pipe for any wind to play upon. "I cannot see the wit," says Hazlitt, "of walking and talking at the same time. When I am in the country I wish to vegetate like the country,"—which is the gist of all that can be said upon this matter. There should be no cackle of voices at your elbow, to jar on the meditative silence of the morning. And so long as a man is reasoning he cannot surrender himself to that fine intoxication that comes of much motion in the open air, that begins in a sort of dazzle and sluggishness of the brain, and ends in a peace that passes comprehension.

During the first day or so of any tour there are moments of bitterness, when the traveller feels more than coldly towards his knapsack, when he is half in a mind to throw it bodily over the hedge and, like Christian on a similar occasion, "give three leaps and go on singing." And yet it soon acquires a property of easiness. It becomes magnetic; the spirit of the journey enters into it. And no sooner have you passed the straps over your shoulder than the lees of sleep are cleared from you, you will pull yourself together with a shake, and fall at once into your stride. And surely, of all possible moods, this, in which a man takes the road, is the best. Of course, if he *will* keep on thinking of his

anxieties, if he will open the merchant Abudah's chest and walk arm in arm with the hag—why, wherever he is, and whether he walk fast or slow, the chances are that he will not be happy. And so much the more shame to himself! There are perhaps thirty men setting forth at that same hour, and I would lay a large wager there is not another dull face among the thirty. It would be a fine thing to follow, in a coat of darkness, one after another of these wayfarers, some summer morning, for the first few miles upon the road. This one, who walks fast, with a keen look in his eyes, is all concentrated in his own mind; he is up at his loom, weaving and weaving, to set the landscape to words. This one peers about, as he goes, among the grasses; he waits by the canal to watch the dragon-flies; he leans on the gate of the pasture, and cannot look enough upon the complacent kine. And here comes another, talking, laughing, and gesticulating to himself. His face changes from time to time, as indignation flashes from his eyes, or anger clouds his forehead. He is composing articles, delivering orations, and conducting the most impassioned interviews, by the way. A little farther on, and it is as like as not he will begin to sing. And well for him, supposing him to be no great master in that art, if he stumble across no stolid peasant at a corner; for on such an occasion I scarcely know which is the more

troubled, or whether it is worse to suffer the confusion of your troubadour, or the unfeigned alarm of your clown. A sedentary population, accustomed, besides, to the strange mechanical bearing of the common tramp, can in no wise explain to itself the gayety of these passers-by. I knew one man who was arrested as a run-away lunatic, because, although a full-grown person with a red beard, he skipped as he went like a child. And you would be astonished if I were to tell you all the grave and learned heads who have confessed to me that, when on walking tours, they sang—and sang very ill—and had a pair of red ears when, as described above, the inauspicious peasant plumped into their arms from round a corner. And here, lest you should think I am exaggerating, is Hazlitt's own confession, from his essay "On Going a Journey," which is so good that there should be a tax levied on all who have not read it:

"Give me the clear blue sky over my head," says he, "and the green turf beneath my feet, a winding road before me, and a three hours' march to dinner—and then to thinking! It is hard if I cannot start some game on these lone heaths. I laugh, I run, I leap, I sing for joy."

Bravo! After that adventure of my friend with the policeman, you would not have cared, would you, to publish that in the first person?

But we have no bravery nowadays, and, even in books, must all pretend to be as dull and foolish as our neighbours. It was not so with Hazlitt. And notice how learned he is (as, indeed, throughout the essay) in the theory of walking tours. He is none of your athletic men in purple stockings, who walk their fifty miles a day: three hours' march is his ideal. And then he must have a winding road, the epicure!

Yet there is one thing I object to in these words of his, one thing in the great master's practice that seems to me not wholly wise. I do not approve of that leaping and running. Both of these hurry the respiration; they both shake up the brain out of its glorious open-air confusion; and they both break the pace. Uneven walking is not so agreeable to the body, and it distracts and irritates the mind. Whereas, when once you have fallen into an equable stride, it requires no conscious thought from you to keep it up, yet it prevents you from thinking earnestly of anything else. Like knitting, like the work of a copying clerk, it gradually neutralizes and sets to sleep the serious activity of the mind. We can think of this or that, lightly and laughingly, as a child thinks, or as we think in a morning doze; we can make puns or puzzle out acrostics, and trifle in a thousand ways with words and rhymes; but when it comes to honest work, when we come to gather ourselves together for

an effort, we may sound the trumpet as loud and long as we please; the great barons of the mind will not rally to the standard, but sit, each one, at home, warming his hands over his own fire and brooding on his own private thought!

In the course of a day's walk, you see, there is much variance in the mood. From the exhilaration of the start, to the happy phlegm of the arrival, the change is certainly great. As the day goes on, the traveller moves from the one extreme towards the other. He becomes more and more incorporated with the material landscape, and the open-air drunkenness grows upon him with great strides, until he posts along the road, and sees everything about him as in a cheerful dream. The first is certainly brighter, but the second stage is the more peaceful. A man does not make so many articles toward the end, nor does he laugh aloud; but the purely animal pleasures, the sense of physical well-being, the delight of every inhalation, of every time the muscles tighten down the thigh, console him for the absence of the others, and bring him to his destination still content.

Nor must I forget to say a word on bivouacs. You come to a milestone on a hill, or some place where deep ways meet under trees; and off goes the knapsack, and down you sit to smoke a pipe in the shade. You sink into yourself, and the

birds come round and look at you; and your smoke dissipates upon the afternoon under the blue dome of heaven; and the sun lies warm upon your feet, and the cool air visits your neck and turns aside your open shirt. If you are not happy, you must have an evil conscience. You may dally as long as you like by the roadside. It is almost as if the millennium were arrived, when we shall throw our clocks and watches over the house-top, and remember time and seasons no more. Not to keep hours for a lifetime is, I was going to say, to live forever. You have no idea, unless you have tried it, how endlessly long is a summer's day that you measure out only by hunger, and bring to an end only when you are drowsy. I know a village where there are hardly any clocks, where no one knows more of the days of the week than by a sort of instinct for the fete on Sundays, and where only one person can tell you the day of the month, and she is generally wrong; and if people were aware how slow Time journeyed in that village, and what armfuls of spare hours he gives, over and above the bargain, to its wise inhabitants, I believe there would be a stampede out of London, Liverpool, Paris, and a variety of large towns, where the clocks lose their heads, and shake the hours out of each one faster than the other, as though they were all in a wager. And all these foolish pilgrims would each bring his own

misery along with him, in a watch-pocket! It is to be noticed, there were no clocks and watches in the much-vaunted days before the flood. It follows, of course, there were no appointments and punctuality was not yet thought upon. "Though ye take from a covetous man all his treasure," says Milton, "he has yet one jewel left; ye cannot deprive him of his covetousness." And so I would say of a modern man of business, you may do what you will for him,—put him in Eden, give him the elixir of life,—he has still a flaw at heart, he still has his business habits. Now, there is no time when business habits are more mitigated than on a walking tour. And so during these halts, as I say, you will feel almost free.

But it is at night, and after dinner, that the best hour comes. There are no such pipes to be smoked as those that follow a good day's march; the flavour of the tobacco is a thing to be remembered, it is so dry and aromatic, so full and so fine. If you wind up the evening with grog, you will own there was never such grog; at every sip a jocund tranquillity spreads about your limbs, and sits easily in your heart. If you read a book—and you will never do so save by fits and starts—you find the language strangely racy and harmonious; words take a new meaning; single sentences possess the ear for half an hour together; and the writer endears himself to you,

at every page, by the nicest coincidence of sentiment. It seems as if it were a book you had written yourself in a dream. To all we have read on such occasions we look back with special favour. "It was on the 10th of April, 1798," says Hazlitt, with amorous precision, "that I sat down to a volume of the new 'Heloise,' at the Inn at Llangollen, over a bottle of sherry and a cold chicken." I should wish to quote more, for though we are mighty fine fellows nowadays, we cannot write like Hazlitt. And, talking of that, a volume of Hazlitt's essays would be a capital pocket-book on such a journey; so would a volume of Heine's songs; and for "Tristram Shandy" I can pledge a fair experience.

If the evening be fine and warm, there is nothing better in life than to lounge before the inn door in the sunset, or lean over the parapet of the bridge, to watch the weeds and the quick fishes. It is then, if ever, that you taste Joviality to the full significance of that audacious word. Your muscles are so agreeably slack, you feel so clean and so strong and so idle, that whether you move or sit still, whatever you do is done with pride and a kingly sort of pleasure. You fall in talk with any one, wise or foolish, drunk or sober. And it seems as if a hot walk purged you, more than anything else, of all narrowness and pride, and left curiosity to play its part freely, as in a child or a man of science. You

lay aside all your own hobbies, to watch provincial humours develop themselves before you, now as a laughable farce, and now grave and beautiful like an old tale.

Or perhaps you are left to your own company for the night, and surely weather imprisons you by the fire. You may remember how Burns, numbering past pleasures, dwells upon the hours when he has been "happy thinking." It is a phrase that may well perplex a poor modern, girt about on every side by clocks and chimes, and haunted, even at night, by flaming dial-plates. For we are all so busy, and have so many far-off projects to realize, and castles in the fire to turn into solid, habitable mansions on a gravel soil, that we can find no time for pleasure trips into the Land of Thought and among the Hills of Vanity. Changed times, indeed, when we must sit all night, beside the fire, with folded hands; and a changed world for most of us, when we find we can pass the hours without discontent, and be happy thinking. We are in such haste to be doing, to be writing, to be gathering gear, to make our voice audible a moment in the derisive silence of eternity, that we forget that one thing, of which these are but the parts—namely, to live. We fall in love, we drink, we run to and fro upon the earth like frightened sheep. And now you are to ask yourself if, when all is done, you would not have

been better to sit by the fire at home, and be happy thinking. To sit still and contemplate,—to remember the faces of women without desire, to be pleased by the great deeds of men without envy, to be everything and everywhere in sympathy, and yet content to remain where and what you are—is not this to know both wisdom and virtue, and to dwell with happiness? After all, it is not they who carry flags, but they who look upon it from a private chamber, who have the fun of the procession. And once you are at that, you are in the very humour of all social heresy. It is no time for shuffling, or for big, empty words. If you ask yourself what you mean by fame, riches, or learning, the answer is far to seek; and you go back into that kingdom of light imaginations which seem too vain in the eyes of Philistines perspiring after wealth, and so momentous to those who are stricken with the disproportions of the world, and, in the face of the gigantic stars, cannot stop to split differences between two degrees of the infinitesimally small, such as a tobacco-pipe or the Roman Empire, a million of money or a fiddlestick's end.

You lean from the window, your last pipe reeking whitely into the darkness, your body full of delicious pains, your mind enthroned in the seventh circle of content; when suddenly the mood changes, the weather-cock goes about, and you ask yourself one question more: whether,

for the interval, you have been the wisest philosopher or the most egregious of donkeys? Human experience is not yet able to reply; but at least you have had a fine moment, and looked down upon all the kingdoms of the earth. And whether it was wise or foolish, to-morrow's travel will carry you, body and mind, into some different parish of the infinite.

ROBERT LOUIS STEVENSON.
